

The future is straightforward and safe:
Gear units and motors in a modular system

Gearmotors

Another milestone at SEW-EURODRIVE: Safe worldwide standards for each drive solution

This brochure on our extremely versatile modular for gearmotors documents once more the values we live by in our company. It shows that you can rely on SEW-EURODRIVE in every respect because the modular system fulfills our brand promise in many ways. It includes technically unique innovations, opens up even more possibilities for selecting the right drive solution, simplifies the configuration of components and provides investment security worldwide.

The redevelopment of the tried and tested DT/DV motor series has turned all gearmotor variants of SEW-EURODRIVE into future-proof innovation carriers of the highest quality. The new AC motor modular system with the DR.. series encompasses the entire range of efficiency ratings, including energy-efficient motors. This is a logical consequence of the developments in environmental policies worldwide.

In the future, gearmotors from SEW-EURODRIVE will continue to fulfill all standards worldwide. What's more, by integrating them into a standardized modular system, SEW-EURODRIVE has become the first manufacturer to offer energy-efficient motors along with conventional AC motors within one series, including three brake variants for each motor. This ensures a much better price for the energy-efficient motor. Last but not least, the DR.. motor is the best SEW-EURODRIVE motor that has ever been launched.

Driving the world – with innovative drive solutions for all industries and for every application. Products and systems from SEW-EURODRIVE are used all over the world. Be it in the automotive, building materials, food and beverage or metal-processing industry – the decision to use drive technology “made by SEW-EURODRIVE” stands for reliability for both functionality and investment.

At the same time, the new motor series offers the same advantages that have made the DT/DV series successful in millions of drive solutions worldwide. These include, above all, performance, compact design, versatility, reliability and long service life. Together with many other benefits, also in combination with our drive electronics components, they have turned our gearmotors into what they are today:

State-of-the-art drive technology.

This brochure gives you a complete overview of all possible gearmotor variants. The content is divided into gear units, motors and accessories/options. At the end, clearly structured tables give an overview of matching components for your individual drive solution.

The area of application for our gear units: the world

We do not exaggerate when we proudly say: There is no industry and no drive application in the world for which our gear units in combination with the required motors would not offer excellent performance. Areas of application include automotive engineering, the food and beverage industry, logistics (airport logistics, intralogistics and port logistics), the wood processing, construction and construction materials industries, and countless special applications, for example in theaters.

Depending on power requirements, space and technical specifications, SEW-EURODRIVE offers the full range of gear units in a modular system:

Helical, parallel-shaft helical, helical-bevel, helical-worm, and SPIROPLAN® right-angle gear units. Input covers, motor adapters and various clamping joints in line with the gear unit family are also available from SEW-EURODRIVE.

Helical gear units (R): always the optimum space/performance ratio

Six single-stage and fourteen two- and three-stage sizes covering a power range from 50 to 18,000 Nm: Our helical gear units always offer an optimum ratio between performance and space requirements. The fine graduation and variety of torque ratings and gear ratios is

peerless. They also satisfy demands for high output speeds or low weight due to the many available sizes.

The result: A helical gear unit is always suitable.

Helical gear units (R)

Type	Maximum output torque Nm	Gear unit reduction ratio i	Gear unit reduction ratio Multi-stage gear unit i
RX series (single-stage) Sizes 57 / 67 / 77 / 87 / 97 / 107	69 – 830	1.30 – 8.65	–
R series (two- and three-stages) Sizes 07 / 17 / 27 / 37 / 47 / 57 / 67 / 77 / 87 / 97 / 107 / 137 / 147 / 167	50 – 18,000 (also with reduced backlash)	3.21 – 289.74	90 – 27,001
RM series (two- and three-stages) Sizes 57 / 67 / 77 / 87 / 97 / 107 / 137 / 147 / 167	450 – 18,000	4.29 – 289.74	134 – 27,001

The gear units of the R series are available in the following designs:

- Single- or multi-stage
- Foot- or flange-mounted
- Foot- and flange-mounted
- Flange-mounted with extended output bearing hub

Parallel-shaft helical gear units (F): tailor-made for adverse space conditions

The particularly slim-fit parallel-shaft helical gear units are used wherever space is limited. Various mounting positions and designs make for a large range of applications even under adverse conditions. Thanks to its design

characteristics and its large torque range from 120 to 18,000 Nm, this standard gear unit is the ideal solution for many materials handling and process engineering applications.

Parallel-shaft helical gear units (F)

Type	Maximum output torque Nm	Gear unit reduction ratio i	Gear unit reduction ratio Multi-stage gear unit i
F series (two- and three-stages) Sizes 27 / 37 / 47 / 57 / 67 / 77 / 87 / 97 / 107 / 127 / 157	120 – 18,000 (also with reduced backlash)	3.77 – 281.71	87 – 31,434

Helical-bevel gear units (K): strong performance and high efficiency in a very compact design

The compact design of all our gear units is most obvious in our helical-bevel gear units. They are sophisticated right-angle gear units for all engineering applications that require space-saving installation. At the same time, they offer a powerful torque range from 200 to 50,000 Nm.

They ensure a remarkably high degree of efficiency of more than 96 per cent in both directions of rotation and for any input speed. A gear unit built to last: The gearing is designed for high endurance and makes for a high-torque, wear-free drive.

Helical-bevel gear units (K)

Type	Maximum output torque Nm	Gear unit reduction ratio i	Gear unit reduction ratio Multi-stage gear unit i
K series Sizes 37 / 47 / 57 / 67 / 77 / 87 / 97 / 107 / 127 / 157 / 167 / 187	200 – 50,000 (also with reduced backlash)	3.98 – 197.37	94 – 32,625

The gear unit series F and K are available in the following designs:

- Foot- or flange-mounted
- In B5 flange-mounted design
- In B14 flange-mounted design
- With solid shaft or hollow shaft
- With hollow shaft with keyed connection, shrink disk, splined hollow shaft or TorqLOC®

Helical-worm gear units (S): cost effectiveness due to simple design

The strength of helical-worm gear units is their simple mechanical structure. Tailored individually to torque and speed requirements, they save installation space and costs when implemented in simple applications. In addition to the large gear ratio in the worm gear stage, our helical-worm gear units also offer a significantly higher level

of efficiency than mere worm gear units. Power is transmitted linearly to the drive shaft and the torque shocks are reduced – making for a low noise level. Their torque range runs from 92 to 4,000 Nm.

Helical-worm gear units (S)

Type	Maximum output torque Nm	Gear unit reduction ratio i	Gear unit reduction ratio Multi-stage gear unit i
S series Sizes 37 / 47 / 57 / 67 / 77 / 87 / 97	92 – 4,000	6.80 – 288.00	110 – 33,818

SPIROPLAN® right-angle gear units (W): low-noise lightweights

The SPIROPLAN® right-angle gearmotors do their job reliably and quietly: In the power range from 0.09 to 4.0 kW, the SPIROPLAN® series provides output torques up to 180 Nm – its wear-free gearing ensuring very quiet operation. In combination with the compact design and the lightweight aluminum housing, the noise level is almost perfectly low.

The oil fill is independent of the mounting position, which means SPIROPLAN® gearmotors can be used universally while requiring almost no maintenance. The gear ratio range offers very high output speeds and optimized mechanical efficiency.

SPIROPLAN® right-angle gear units (W)

Type	Maximum output torque Nm	Gear unit reduction ratio i	
W10	25	3.91 – 75.00	
W20	40	6.57 – 75.00	
W30	70	6.57 – 75.00	
W37	110	3.20 – 69.05	
W47	180	3.27 – 74.98	

The gear units of the S and W series are available in the following designs:

- Foot- or flange-mounted
- In B5 flange-mounted design
- In B14 flange-mounted design
- With solid shaft or hollow shaft

Additional variants of the S gear unit series:

- With hollow shaft with keyed connection, shrink disk, splined hollow shaft or TorqLOC®

The new modular motor system: One single series for millions of drive combinations

Configuring gearmotors with AC motors from SEW-EURODRIVE has never been easier: A modular system comprising the motors of the new DR.. series offers all efficiency levels, including energy-efficient motors. In the development of energy-efficient motors, SEW-EURODRIVE became the first company in the world to succeed in using die-cast copper technology in industrial high-volume series production in 2002.

As another new development in the new modular system, SEW-EURODRIVE offers a selection of three different brake sizes for each motor size as well as cost-optimized encoders integrated into the motor.

All motor options and variants of the new DR.. series are available for all efficiency classes. They comply with all worldwide standards and already fulfill the forthcoming IEC standard. They bring a whole range of unique benefits to planners and users.

Overview of benefits:

- Easiest configuration and ordering
- Configuration of all motor variants from just one series
- Even more options, even fewer restrictions
- Compact design saves space and costs
- Future-proof, also as regards environmental protection (standards)
- Reduced prices for energy-efficient motors due to integration
- Reduced prices due to selection of different brake sizes

The efficiency classes of the future

The efficiencies of the energy-efficient motors from SEW-EURODRIVE comply with international limit values and standards, often they surpass them. The motors are also available as 2- and 6-pole variants in IE3, IE2 and IE1.

The list of standards includes:

- **Europe** ErP 2009/125/EC
- **Australia/New Zealand** MEPS 2006
- **USA** EISA 2007
- **Canada** CSA C390
- **Brazil** NBR 17094, PROCEL
- **Korea** REELS
- **China** CEL 2011
- and other (Chile, Turkey,...)

Premium Efficiency	IE3
	<p>Europe, Australia, New Zealand, USA and Canada</p> <ul style="list-style-type: none"> – Extremely high levels of efficiency – DRP.. type AC motors (energy-efficient motors): Motor size 90 and larger: 0.75 – 160 kW – Copper or aluminum die-cast rotor cage
High Efficiency	IE2
	<p>Europe, Australia, New Zealand, USA, Canada, Brazil, Korea, China ...</p> <ul style="list-style-type: none"> – High levels of efficiency – DRE.. type AC motors (energy-efficient motors): Motor size 80 and larger: 0.75 – 200 kW – Copper or aluminum die-cast rotor cage
Standard Efficiency	IE1
	<p>Asia, Africa, Central and South America (without Brazil)</p> <ul style="list-style-type: none"> – Improved levels of efficiency – DRS.. type AC motors (standard motor): Motor size 71 and larger: 0.37 – 200 kW – Copper or aluminum die-cast rotor cage

The technical data (4-pole motors) is listed on page 20.

The brake variants in the modular system

Smaller holding torques are required for inverter operation, and less braking work for energy-efficient motors. Today's brakes are often dimensioned too large for this purpose. This is why the new modular motor system from SEW-EURODRIVE makes it possible to choose from up to three brake sizes for each motor size (overview on page 21).

Additional features of the brakes:

- Manual brake release
 - automatic disengaging function
 - lockable
- Function and wear monitoring

The built-in encoder is fully integrated into the motor

Many applications require only speed and position detection. Previously, elaborate and cost-intensive external encoders were mounted to the motor or initiators were used for complex sensing to fulfill these requirements.

SEW-EURODRIVE offers a unique and cost-optimized solution: the built-in encoder. The encoder is fully integrated into the motor and connected in or at the motor terminal box. Due to its low degree of complexity, the built-in encoder can be retrofitted.

Installation flexibility also on the input end

SEW-EURODRIVE offers optimum solutions for the input end in line with the gear unit family, to provide more flexibility and efficiency also on the motor side. Input covers and motor adapters are characterized by compact dimensions, low weight and long service life. Optimum integration with our gear units improves overall efficiency of the drive system.

SEW-EURODRIVE offers eight different cover sizes for different power ratings. The options enable optimum connection of the drive components depending on the gear unit and the drive task. Take the height adjustment for covers, for example, with a height-adjustable motor moun-

ting platform that allows for simple installation and startup. Or the integrated backstop, which ensures compact drive design and optimum operating characteristics.

The input covers and adapter variants are excellent examples to show how our gear units can provide more efficiency for any drive anywhere.

The adapters also increase the number of possibilities

In addition to the integrated torque limiting coupling, there is an adapter variant with integrated hydraulic centrifugal coupling. It is equipped with protection against overheating as standard. An integrated mechanical brake and an integrated backstop are optional. With the

AM motor adapters, all IEC motors size 63 to 280 and all NEMA motors size 56 to 365 can be mounted to the 7-series gear units. The AQ adapter accepts servomotors – either with positive key connection (AQA) or with non-positive connection as clamping ring hub (AQH).

Installation does not get much easier: with the TorqLOC® hollow shaft mounting system

Simple

The new design of the TorqLOC® hollow shaft mounting system makes for simple assembly and significantly improves removal of the drive even after lengthy periods of operation. SEW-EURODRIVE will deliver the drive with the bushing for the respective diameter. The operator will install the clamping ring on the customer shaft and the drive can be simply mounted and fixed. The installation is simple and fast because there are no interference fits that have to be overcome. Removal will be just as simple and takes place in reverse order.

Economical

The TorqLOC® hollow shaft mounting system makes it possible to use drawn, unprocessed material up to quality level h11 for customer shafts, reducing costs even further. No additional machining of the customer shaft is required.

Flexible

Planned down to the last detail: Up to four different rated diameters can be adapted with one gear unit size, resulting in a reduction of variants.

Awards

The trade journal "Plant Engineering" awarded the "Product of the Year 2002". The award is given to innovative products which lead to ground-breaking improvements at the production level.

SEW-EURODRIVE received the "Silver Award" for TorqLOC® in the category "Power Transmission". The "Silver Award" was handed out at the National Plant Engineering Show in Chicago in early March 2003.

All you need is a PC to discover our range of almost unlimited possibilities

Printed documentation, CD-ROMs or downloads: As diverse as the product range of SEW-EURODRIVE are the tools supporting the designer in the planning and design phase. The comprehensive information material and the product-supporting software are fast and simple tools for selecting a drive and integrating it into the machine or system design.

Order or download from the Internet

The series of publications entitled "Drive Engineering – Practical Implementation," such as volume 1 "Project Planning for Drives,"

documentation for different products (Docu ROMs) and presentations (CBI-ROM) on CD-ROM, or operating instructions, manuals and catalogs offer detailed basic information.

Workbench

The new SEW Workbench is a planning and configuration tool to specify SEW-EURODRIVE products. The user can employ simple graphical elements to configure even complex systems and check their functionality quickly and easily. A variety of new functions offers our customers the opportunity to find a drive solution to meet their individual requirements and discuss the results with an SEW-EURODRIVE sales representative.

The SEW Workbench offers catalog selection functions for gearmotors, electronic components and prefabricated cables as well as accessories and options.

Calculation of the CAD data ensures the creation of true-to-scale drawings of SEW-EURODRIVE products in the 2D formats DXF and DWG as well as in the 3D formats SAT, STEP, IGES, VRML,

VDAFS and 3D-DXF. Thanks to the high degree of functionality, spare parts lists, mounting position sheets, dimension sheets and operating instructions are determined automatically.

To use SEW Workbench, all you need to do is register via the SEW-EURODRIVE customer portal DriveGate® once you have received the data DVD (<https://portal.drivegate.biz>). An Internet update service keeps the products and functions up-to-date.

The SEW Workbench is available in the following languages:

German, English, French, Dutch, Spanish, Portuguese, Russian, Czech, and Polish.
