| <b>2</b> | <b>Safety notes .....</b>                                              | <b>9</b>  |
| 2.1      | Preliminary information .....                                          | 9         |
| 2.2      | Duties of the user .....                                               | 9         |
| 2.3      | Target group .....                                                     | 10        |
| 2.4      | Designated use .....                                                   | 11        |
| 2.5      | Transportation/storage .....                                           | 11        |
| 2.6      | Installation/assembly .....                                            | 12        |
| 2.7      | Electrical work .....                                                  | 13        |
| 2.8      | Startup/operation .....                                                | 15        |
| <b>3</b> | <b>Motor structure .....</b>                                           | <b>16</b> |
| 3.1      | Basic structure of EDRN63 motors .....                                 | 16        |
| 3.2      | Basic structure of EDR..71 – 132, EDRN71 – 132S motors .....           | 17        |
| 3.3      | Basic structure of EDR..160 – 180, EDRN132M – 180 motors .....         | 18        |
| 3.4      | Basic structure of EDR..200 – 225, EDRN200 – 225 motors .....          | 19        |
| 3.5      | Basic structure of EDR..250 – 280, EDRN250 – 280 motors .....          | 20        |
| 3.6      | Basic structure of EDR..315, EDRN315 motors .....                      | 21        |
| 3.7      | Nameplate .....                                                        | 22        |
| 3.8      | Motor type designations .....                                          | 28        |
| 3.9      | Designs and options .....                                              | 29        |
| 3.10     | Functional safety .....                                                | 33        |
| <b>4</b> | <b>Mechanical installation .....</b>                                   | <b>34</b> |
| 4.1      | Before you start .....                                                 | 34        |
| 4.2      | Preliminary work after longer periods of storage .....                 | 35        |
| 4.3      | Motor installation notes .....                                         | 38        |
| 4.4      | Installation tolerances .....                                          | 40        |
| 4.5      | Assembling the input elements .....                                    | 40        |
| 4.6      | Encoder mounting adapter .....                                         | 41        |
| 4.7      | Terminal box .....                                                     | 45        |
| 4.8      | Coating .....                                                          | 52        |
| 4.9      | Retrofitting (option /F.A) or modifying (option /F.B) motor feet ..... | 53        |
| 4.10     | Options .....                                                          | 57        |
| <b>5</b> | <b>Electrical installation .....</b>                                   | <b>61</b> |
| 5.1      | General information .....                                              | 61        |
| 5.2      | Additional regulations .....                                           | 61        |
| 5.3      | Wiring diagrams and terminal assignment diagrams .....                 | 61        |
| 5.4      | Cable entries .....                                                    | 62        |

|          |                                                                                |            |
|----------|--------------------------------------------------------------------------------|------------|
| 5.5      | Equipotential bonding .....                                                    | 62         |
| 5.6      | Wiring notes .....                                                             | 62         |
| 5.7      | Special aspects for operation with a frequency inverter .....                  | 63         |
| 5.8      | Exterior grounding at the terminal box, LF grounding .....                     | 64         |
| 5.9      | Improving the grounding (EMC), HF grounding .....                              | 66         |
| 5.10     | Special aspects in switching operation .....                                   | 69         |
| 5.11     | Ambient conditions during operation.....                                       | 70         |
| 5.12     | Motors of design 2G-b, 2D-b, 2GD-b, 3G-c, 3D-c and 3GD-c .....                 | 72         |
| 5.13     | Notes regarding the connection of the motor.....                               | 74         |
| 5.14     | Motor connection via terminal board .....                                      | 76         |
| 5.15     | Connecting the motor via terminal strip .....                                  | 80         |
| 5.16     | Connecting the brake .....                                                     | 82         |
| 5.17     | Connecting the encoder .....                                                   | 86         |
| 5.18     | Options.....                                                                   | 89         |
| <b>6</b> | <b>Duty types and limit values .....</b>                                       | <b>95</b>  |
| 6.1      | Permitted duty types .....                                                     | 95         |
| 6.2      | Line operation .....                                                           | 97         |
| 6.3      | Inverter operation.....                                                        | 99         |
| 6.4      | Safe operation of motors with EPL "Gb" and "Db" on inverters .....             | 101        |
| 6.5      | Safe operation of motors with EPL "Gc" and "Dc" on inverters .....             | 111        |
| 6.6      | Typical application .....                                                      | 121        |
| 6.7      | Special application .....                                                      | 125        |
| 6.8      | Group drive .....                                                              | 137        |
| <b>7</b> | <b>Startup.....</b>                                                            | <b>138</b> |
| 7.1      | General information .....                                                      | 138        |
| 7.2      | Before startup .....                                                           | 138        |
| 7.3      | Parameter setting: Frequency inverters for motors with EPL "Gb" and "Db" ..... | 139        |
| 7.4      | Parameter setting: Frequency inverters for motors with EPL "Gc" and "Dc" ..... | 144        |
| 7.5      | Motors with backstop /RS .....                                                 | 146        |
| <b>8</b> | <b>Inspection/maintenance .....</b>                                            | <b>147</b> |
| 8.1      | General information .....                                                      | 147        |
| 8.2      | Inspection and maintenance intervals.....                                      | 149        |
| 8.3      | Bearing lubrication .....                                                      | 152        |
| 8.4      | Reinforced bearings.....                                                       | 153        |
| 8.5      | Motor and brake maintenance – preliminary work .....                           | 154        |
| 8.6      | Inspection/maintenance work for EDRN63 – 315 motors .....                      | 186        |
| 8.7      | Inspection/maintenance work EDR..71 – 315, EDRN63 – 315 brakemotors.....       | 188        |
| 8.8      | Altering the blocking direction on motors with a backstop .....                | 212        |
| <b>9</b> | <b>Technical data .....</b>                                                    | <b>215</b> |
| 9.1      | Braking torques.....                                                           | 215        |
| 9.2      | Braking work, working air gap, and brake lining carrier thickness .....        | 217        |
| 9.3      | Operating currents .....                                                       | 218        |
| 9.4      | Resistors .....                                                                | 222        |
| 9.5      | Brake control .....                                                            | 228        |

|           |                                                                                                                 |            |

## 1 General information

### 1.1 About this documentation

#### The documentation at hand is the original.

This documentation is an integral part of the product. The documentation is intended for all employees who perform work on the product.

Make sure this documentation is accessible and legible. Ensure that persons responsible for the systems and their operation as well as persons who work on the product independently have read through the documentation carefully and understood it. If you are unclear about any of the information in this documentation or if you require further information, contact SEW-EURODRIVE.

### 1.2 Structure of the safety notes

#### 1.2.1 Meaning of signal words

The following table shows the graduation and meaning of the signal words for safety notes.

| Signal word                                | Meaning                                                        | Consequences if disregarded              |
|--------------------------------------------|----------------------------------------------------------------|------------------------------------------|
| <b>▲ DANGER</b>                            | Imminent hazard                                                | Severe or fatal injuries                 |
| <b>▲ WARNING</b>                           | Possible dangerous situation                                   | Severe or fatal injuries                 |
| <b>▲ CAUTION</b>                           | Possible dangerous situation                                   | Minor injuries                           |
| <b>NOTICE</b>                              | Possible damage to property                                    | Damage to the product or its environment |
| <b>INFORMATION ON EXPLOSION PROTECTION</b> | Important information about explosion protection               |                                          |
| <b>INFORMATION</b>                         | Useful information or tip: Simplifies handling of the product. |                                          |

#### 1.2.2 Structure of section-related safety notes

Section-related safety notes do not apply to a specific action but to several actions pertaining to one subject. The hazard symbols used either indicate a general hazard or a specific hazard.

This is the formal structure of a safety note for a specific section:

#### SIGNAL WORD

Type and source of hazard.

Possible consequence(s) if disregarded.

- Measure(s) to prevent the hazard.

## Meaning of the hazard symbols

The hazard symbols in the safety notes have the following meaning:

| Hazard symbol                                                                       | Meaning                                 |
|-------------------------------------------------------------------------------------|-----------------------------------------|
|    | General hazard                          |
|    | Warning of dangerous electrical voltage |
|    | Warning of hot surfaces                 |
|    | Warning of automatic restart            |
|   | Note on explosion protection            |
|  | Warning of explosions                   |

### 1.2.3 Structure of embedded safety notes

Embedded safety notes are directly integrated into the instructions just before the description of the dangerous action.

This is the formal structure of an embedded safety note:

**⚠ SIGNAL WORD!** Type and source of hazard. Possible consequence(s) if disregarded. Measure(s) to prevent the hazard.

## 1.3 Rights to claim under limited warranty

Read the information in this documentation. This is essential for fault-free operation and fulfillment of any rights to claim under limited warranty. Read the documentation before you start working with the product.

## 1.4 Product names and trademarks

The brands and product names in this documentation are trademarks or registered trademarks of their respective titleholders.

**1.5 Copyright notice**

© 2023 SEW-EURODRIVE. All rights reserved. Unauthorized reproduction, modification, distribution or any other use of the whole or any part of this documentation is strictly prohibited.

**1.6 Other applicable documentation**

Observe the corresponding documentation for all additional components.

## **2 Safety notes**

### **2.1 Preliminary information**

The following general safety notes serve the purpose of preventing injury to persons and damage to property. They primarily apply to the use of products described in this documentation. If you use additional components, also observe the relevant warning and safety notes.

### **2.2 Duties of the user**

As the user, you must ensure that the basic safety notes are observed and complied with. Make sure that persons responsible for the machinery and its operation as well as persons who work on the device independently have read through the documentation carefully and understood it.

As the user, you must ensure that all of the work listed in the following is carried out only by qualified specialists:

- Setup and installation
- Installation and connection
- Startup
- Maintenance and repairs
- Shutdown
- Disassembly

Ensure that the persons who work on the product pay attention to the following regulations, conditions, documentation, and information:

- National and regional safety and accident prevention regulations
- Warning and safety signs on the product
- All other relevant project planning documents, installation and startup instructions, and wiring diagrams
- Do not assemble, install or operate damaged products
- All system-specific specifications and conditions

Ensure that systems in which the product is installed are equipped with additional monitoring and protection devices. Observe the applicable safety regulations and legislation governing technical work equipment and accident prevention regulations.

### 2.3 Target group

|                                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|--------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Specialist for mechanical work       | <p>Any mechanical work may be performed only by adequately qualified specialists. Specialists in the context of this documentation are persons who are familiar with the design, mechanical installation, troubleshooting, and maintenance of the product, and who possess the following qualifications:</p> <ul style="list-style-type: none"> <li>• Qualifications in the field of mechanics in accordance with the national regulations</li> <li>• Familiarity with this documentation</li> </ul>                                                        |
| Specialist for electrotechnical work | <p>Any electrotechnical work may be performed only by electrically skilled persons with a suitable education. Electrically skilled persons in the context of this documentation are persons who are familiar with electrical installation, startup, troubleshooting, and maintenance of the product, and who possess the following qualifications:</p> <ul style="list-style-type: none"> <li>• Qualifications in the field of electrical engineering in accordance with the national regulations</li> <li>• Familiarity with this documentation</li> </ul> |
| Additional qualifications            | <p>In addition to that, these persons must be familiar with the valid safety regulations and laws, as well as with the requirements of the standards, directives, and laws specified in this documentation.</p> <p>The persons must have the express authorization of the company to operate, program, parameterize, label, and ground devices, systems, and circuits in accordance with the standards of safety technology.</p>                                                                                                                            |
| Instructed persons                   | <p>All work in the areas of transportation, storage, operation and waste disposal must be carried out by persons who are trained appropriately. The purpose of the training is to give persons the ability to perform the required tasks and work steps in a safe and correct manner.</p>                                                                                                                                                                                                                                                                   |

## 2.4 Designated use

The product is intended for use in industrial and commercial systems.

In the case of installation in electrical systems or machines, it is prohibited to start the proper operation of the product until it is determined that the machine meets the requirements stipulated in the local laws and directives.

### INFORMATION

- A motor may only be operated on an inverter if the requirements of the IECEx Certificate of Conformity, this documentation, and the information on the nameplate of the motor are fulfilled.
- The motor must not be operated in areas/applications that produce strong charges on the motor housing.
  - Example: As a fan motor inside a tube. Dust transported in the tube can generate an electrostatic charge. The dust can ignite as a result of electrostatic discharge.

## 2.5 Transportation/storage

Inspect the shipment for damage as soon as you receive the delivery. Inform the shipping company immediately about any damage. If the product is damaged, it must not be assembled, installed or started up.

The lifting eyebolts are designed to carry only the weight of the motor without gear unit. Tighten installed lifting eyebolts. Mounted gear units have separate suspension attachments, which must be used according to the gear unit operating instructions when lifting the gearmotor. Do not mount any additional loads.

The installed lifting eyebolts are in accordance with DIN 580. Observe the loads and regulations specified there. The tension force vector of the slings must not exceed a 45° angle in accordance with DIN 580.

If necessary, use suitable, sufficiently dimensioned handling equipment.

Observe the following notes when transporting the device:

- Always use all attachment points if available. The attachment points are designed to carry only the mass of the product. Severe or fatal injuries. Do not apply any additional loads.
- Ensure that the product is not subject to mechanical impact.

If the product is not immediately installed, it must be stored in a dry and dust-free location. The product can be stored for up to 9 months without requiring any special measures before startup. Do not store the product outdoors.

Do not transport or store the product on the fan guard.

## 2.6 Installation/assembly

Note the following points during installation:

- Make sure that the supports are even, the foot and flange mounting is correct and if there is direct coupling, align with precision.
- Avoid resonance between the rotational frequency and the double supply system frequency.
- Release the brake (for motors with mounted brake).
- Turn the rotor by hand and listen for unusual grinding noise.
- Check the direction of rotation in decoupled state.
- Only install or remove belt pulleys and couplings using suitable devices (heat up). Cover the belt pulleys and couplings with a touch guard. Avoid unacceptable belt tension.
- Establish any necessary pipe connections.
- Mounting positions with the shaft end pointing upward must be equipped with a cover to prevent foreign objects from falling into the fan. Ensure that ventilation openings are not obstructed and that used air cannot be drawn in again straight away. The same applies to air from adjacent units.

See also the information in chapter "Mechanical installation" (→  34).

### 2.6.1 Restrictions of use

The following applications are prohibited unless the device is explicitly designed for such use:

- Use in areas exposed to harmful oils, acids, gases, vapors, dust, and radiation
- Operation in applications with impermissibly high mechanical vibration and shock loads in excess of the regulations stipulated in EN 61800-5-1

## 2.7 Electrical work

### 2.7.1 Carrying out electrical work safely

Observe the following information to carry out electrical work safely during installation and maintenance:

- Electrical work may only be carried out by electrically skilled persons.
- Always adhere to the 5 safety rules for working on electrical components:
  - Disconnect
  - Secure the drive against restart
  - Check that no voltage is applied
  - Ground and short-circuit it
  - Cover or safeguard neighboring live parts
- When the device is switched on, dangerous voltages are present at all power connections as well as at any connected cables and terminals. This also applies even when the product is inhibited and the motor is at standstill.

### 2.7.2 Electrical connection

Exceeding the tolerances stated in IEC 60034-1 (VDE 0530, Part 1) – voltage  $\pm 5\%$ , frequency  $\pm 2\%$ , curve shape, symmetry – increases the heating and influences electromagnetic compatibility. Also comply with the standard DIN IEC 60364 "Erection of low-voltage installations" and the local regulations for the operation of electrical installations, e.g. EN 50110.

In addition to the generally applicable installation regulations for low-voltage electrical equipment, you must observe the special regulations for the installation of electrical systems in potentially explosive areas applicable in the country of use. In Australia and New Zealand, relevant standards for hazardous locations are standards AS/NZS60079 and AS/NZS3000, in Brazil ABNT NBR IEC 60079 and IEC 60079-14.

Observe the wiring information and differing data on the nameplate as well as the provided wiring diagram.

The connection must be a permanently safe electrical connection (no protruding wire ends). Use the corresponding cable-end equipment. Establish a safe PE connection.

When the motor is connected, the distances to non-insulated and live parts must not be shorter than the minimum values. Adhere to the national specifications. According to the standards in the table, the minimum distances must not be shorter than the following values:

| Protection type/<br>protection level | Standard          | Minimum distance at nominal<br>voltage $U_N$ |                                      |
|--------------------------------------|-------------------|----------------------------------------------|--------------------------------------|
|                                      |                   | $\leq 500 \text{ V}$                         | $> 500 \text{ V} \leq 690 \text{ V}$ |
| e                                    | IEC 60079-7:2007  | 8 mm                                         | 10 mm                                |
| nA                                   | IEC 60079-15:2010 | 5 mm                                         | 5.5 mm                               |
| eb                                   | IEC 60079-7:2015  | 8 mm                                         | 10 mm                                |
| ec                                   | IEC 60079-7:2015  | 5 mm                                         | 5.5 mm                               |

The terminal box must be free from foreign objects, dirt and humidity. Unused cable entry openings and the connection box itself must be sealed so that they are dust- and water-proof.

Secure the key(s) for the test run without output elements.

When operating low-voltage machines with brakes, check that the brake is functioning properly before startup.

Observe the notes in chapter "Electrical installation".

## 2.8 Startup/operation

Risk of burns: The surface temperature of the product can exceed 60 °C during operation. Do not touch the product during operation. Let the product cool down before touching it.

Do not deactivate monitoring and protection devices of the machine or system, even for a test run.

Depending on the degree of protection, products may have live, uninsulated, and sometimes moving or rotating parts as well as hot surfaces during operation.

Make sure that any existing transport protection is removed.

In the event of deviations from normal operation, switch off the product. Possible deviations are increased temperatures, noise, or vibration, for example. Determine the cause. Contact SEW-EURODRIVE if necessary.

Ensure that the terminal box is closed and screwed down before applying the supply voltage.

Additional preventive measures may be required for applications with increased hazard potential. Be sure to check the effectiveness of the protection devices after every modification.

Mechanical blocking or internal protective functions of the product can cause a motor standstill. Eliminating the cause of the problem or performing a reset may result in the drive restarting automatically. If, for safety reasons, this is not permitted for the drive-controlled machine, first disconnect the product from the supply system and then start troubleshooting.

At low motor speeds, the centrifugal forces are so low that the sprags rub against the inner and outer ring. This results in overheating of the friction surfaces.

- Do not permanently operate motors with backstop /RS below lift-off speed.

Explosion due to overheating when using motors with backstop /RS

### 3 Motor structure

#### 3.1 Basic structure of EDRN63 motors

The following figure shows an example of the basic structure of an EDRN63 motor:

9007227492461451

|                               |                               |                          |                             |
|-------------------------------|-------------------------------|--------------------------|-----------------------------|
| [1] Rotor                     | [35] Fan guard                | [114] Tooth lock washer  | [452] Terminal strip        |
| [2] Retaining ring            | [36] Fan                      | [116] Terminal clip      | [454] Retaining plate       |
| [3] Key                       | [41] Equalizing ring          | [117] Hex head screw     | [705] Canopy                |
| [7] Flanged endshield         | [42] Rear endshield           | [120] Support plate      | [706] Spacer                |
| [9] Screw plug                | [44] Deep groove ball bearing | [123] Hex head screw     | [707] Pan head screw        |
| [10] Retaining ring           | [90] Bed plate                | [124] Tooth lock washer  | [715] Blind rivet           |
| [11] Deep groove ball bearing | [91] Hex nut                  | [129] Screw plug         | [716] Washer                |
| [12] Retaining ring           | [94] Flat head screw          | [131] Gasket for cover   | [1449] Screw                |
| [13] Cap screw                | [100] Hex nut                 | [132] Terminal box cover | [1450] Washer               |
| [16] Stator                   | [103] Stud                    | [134] Screw plug         | [1451] Serrated lock washer |
| [19] Screw                    | [106] Oil seal                | [156] Information sign   | [1480] O-ring               |
| [22] Hex head screw           | [108] Nameplate               | [216] Hex nut            |                             |
| [30] Oil seal                 | [109] Grooved pin             | [230] Hex nut            |                             |
| [32] Retaining ring           | [113] Pan head screw          | [392] Gasket             |                             |

### 3.2 Basic structure of EDR..71 – 132, EDRN71 – 132S motors

The following figure shows an example of the basic structure of EDR..71 – 132, EDRN71 – 132S motors with cage clamp:

|                               |                               |                          |                       |
|-------------------------------|-------------------------------|--------------------------|-----------------------|
| [1] Rotor                     | [36] Fan                      | [113] Pan head screw     | [139] Hex head screw  |
| [2] Retaining ring            | [41] Equalizing ring          | [116] Retaining clip     | [140] Lock washer     |
| [3] Key                       | [42] B-side endshield         | [117] Hex head screw     | [148] Retaining clip  |
| [7] Flanged endshield         | [44] Deep groove ball bearing | [118] Lock washer        | [262] Terminal        |
| [9] Screw plug                | [90] Bed plate                | [119] Pan head screw     | [392] Gasket          |
| [10] Retaining ring           | [91] Hex nut                  | [122] Tooth lock washer  | [452] Terminal strip  |
| [11] Deep groove ball bearing | [93] Countersunk screw        | [123] Hex head screw     | [454] Support rail    |
| [12] Retaining ring           | [100] Hex nut                 | [124] Tooth lock washer  | [616] Retaining plate |
| [13] Cap screw                | [103] Stud                    | [128] Retaining clip     | [705] Canopy          |
| [16] Stator                   | [106] Oil seal                | [129] Screw plug         | [706] Spacer          |
| [22] Hex head screw           | [107] Oil flinger             | [131] Gasket for cover   | [707] Pan head screw  |
| [24] Lifting eyebolt          | [108] Nameplate               | [132] Terminal box cover | [715] Blind rivet     |
| [30] Oil seal                 | [109] Grooved pin             | [134] Screw plug         | [716] Washer          |
| [32] Retaining ring           | [111] Gasket for lower part   | [137] Screw              | [1480] O-ring         |
| [35] Fan guard                | [112] Terminal box lower part |                          |                       |

### 3.3 Basic structure of EDR..160 – 180, EDRN132M – 180 motors

The following figure shows an example of the basic structure of EDR..160 – 180, EDRN132M – 180 motors with anti-twist frame:

|                               |                               |                               |                          |
|-------------------------------|-------------------------------|-------------------------------|--------------------------|
| [1] Rotor                     | [30] Sealing ring             | [106] Oil seal                | [131] Gasket for cover   |
| [2] Retaining ring            | [31] Key                      | [107] Oil flinger             | [132] Terminal box cover |
| [3] Key                       | [32] Retaining ring           | [108] Nameplate               | [134] Screw plug         |
| [7] Flange                    | [35] Fan guard                | [109] Grooved pin             | [139] Hex head screw     |
| [9] Screw plug                | [36] Fan                      | [111] Gasket for lower part   | [140] Washer             |
| [10] Retaining ring           | [41] Cup spring               | [112] Terminal box lower part | [390] O-ring             |
| [11] Deep groove ball bearing | [42] Rear endshield           | [116] Serrated lock washer    | [219] Hex nut            |
| [12] Retaining ring           | [44] Deep groove ball bearing | [117] Stud                    | [705] Canopy             |
| [14] Washer                   | [90] Foot                     | [118] Washer                  | [706] Spacer             |
| [15] Hex head screw           | [91] Hex nut                  | [119] Cap screw               | [707] Hex head screw     |
| [16] Stator                   | [93] Washer                   | [122] Tooth lock washer       | [715] Hex head screw     |
| [17] Hex nut                  | [94] Cap screw                | [123] Hex head screw          | [1213] Kit <sup>1)</sup> |
| [19] Cap screw                | [100] Hex nut                 | [124] Tooth lock washer       |                          |
| [22] Hex head screw           | [103] Stud                    | [128] Serrated lock washer    |                          |
| [24] Lifting eyebolt          | [104] Supporting ring         | [129] Screw plug              |                          |

1) 1 anti-twist frame, 1 terminal board, 4 sleeves, 2 screws, 2 nuts

### 3.4 Basic structure of EDR..200 – 225, EDRN200 – 225 motors

The following figure shows an example of the basic structure of EDR..200 – 225, EDRN200 – 225 motors with anti-twist frame:

|                               |                               |                               |                          |
|-------------------------------|-------------------------------|-------------------------------|--------------------------|
| [1] Rotor                     | [31] Key                      | [107] Oil flinger             | [132] Terminal box cover |
| [2] Retaining ring            | [32] Retaining ring           | [108] Nameplate               | [134] Screw plug         |
| [3] Key                       | [35] Fan guard                | [109] Grooved pin             | [139] Hex head screw     |
| [7] Flange                    | [36] Fan                      | [111] Gasket for lower part   | [140] Washer             |
| [9] Screw plug                | [40] Retaining ring           | [112] Terminal box lower part | [390] O-ring             |
| [11] Deep groove ball bearing | [42] Rear endshield           | [116] Serrated lock washer    | [219] Hex nut            |
| [15] Cap screw                | [43] Supporting ring          | [117] Stud                    | [705] Canopy             |
| [16] Stator                   | [44] Deep groove ball bearing | [118] Washer                  | [706] Spacer bolt        |
| [19] Cap screw                | [90] Foot                     | [119] Cap screw               | [707] Hex head screw     |
| [21] Oil seal flange          | [93] Washer                   | [122] Tooth lock washer       | [715] Hex head screw     |
| [22] Hex head screw           | [94] Cap screw                | [123] Hex head screw          | [1213] Kit <sup>1)</sup> |
| [24] Lifting eyebolt          | [100] Hex nut                 | [124] Tooth lock washer       |                          |
| [25] Cap screw                | [103] Stud                    | [128] Serrated lock washer    |                          |
| [26] Shield ring              | [105] Cup spring              | [129] Screw plug              |                          |
| [30] Oil seal                 | [106] Oil seal                | [131] Gasket for cover        |                          |

1) 1 anti-twist frame, 1 terminal board, 4 sleeves, 2 screws, 2 nuts

### 3.5 Basic structure of EDR..250 – 280, EDRN250 – 280 motors

The following figure shows an example of the basic structure of EDR..250 – 280, EDRN250 – 280 motors with anti-twist frame:

14397384075

|                               |                               |                               |                             |
|-------------------------------|-------------------------------|-------------------------------|-----------------------------|
| [1] Rotor                     | [35] Fan guard                | [112] Terminal box lower part | [143] Adapter plate         |
| [2] Retaining ring            | [36] Fan                      | [113] Cap screw               | [144] Cap screw             |
| [3] Key                       | [40] Retaining ring           | [114] Tooth lock washer       | [159] Connection piece      |
| [7] Flange                    | [42] Rear endshield           | [116] Serrated lock washer    | [160] Connection piece seal |
| [9] Screw plug                | [43] Supporting ring          | [117] Stud                    | [161] Hex head screw        |
| [11] Deep groove ball bearing | [44] Deep groove ball bearing | [118] Washer                  | [162] Tooth lock washer     |
| [15] Cap screw                | [90] Foot                     | [119] Cap screw               | [219] Hex nut               |
| [16] Stator                   | [93] Washer                   | [122] Tooth lock washer       | [705] Canopy                |
| [19] Cap screw                | [94] Cap screw                | [123] Hex head screw          | [706] Spacer bolt           |
| [21] Oil seal flange          | [100] Hex nut                 | [124] Tooth lock washer       | [707] Hex head screw        |
| [22] Hex head screw           | [103] Stud                    | [128] Serrated lock washer    | [715] Hex head screw        |
| [24] Lifting eyebolt          | [105] Compression spring      | [129] Screw plug              | [1457] Set screw            |
| [25] Cap screw                | [106] Oil seal                | [131] Gasket for cover        | [1453] Screw plug           |
| [26] Shield ring              | [107] Oil flinger             | [132] Terminal box cover      | [143] Adapter plate         |
| [30] Oil seal                 | [108] Nameplate               | [134] Screw plug              |                             |
| [31] Key                      | [109] Grooved pin             | [139] Hex head screw          |                             |
| [32] Retaining ring           | [111] Gasket for lower part   | [140] Washer                  |                             |

### 3.6 Basic structure of EDR..315, EDRN315 motors

The following figure shows an example of the basic structure of EDR..315, EDRN315 with anti-twist frame:

9007213690531979

|                               |                               |                               |                             |
|-------------------------------|-------------------------------|-------------------------------|-----------------------------|
| [1] Rotor                     | [35] Fan guard                | [112] Terminal box lower part | [143] Adapter plate         |
| [2] Retaining ring            | [36] Fan                      | [113] Cap screw               | [144] Cap screw             |
| [3] Key                       | [40] Retaining ring           | [114] Tooth lock washer       | [159] Connection piece      |
| [7] Flange                    | [42] Rear endshield           | [116] Serrated lock washer    | [160] Connection piece seal |
| [9] Screw plug                | [43] Supporting ring          | [117] Stud                    | [161] Hex head screw        |
| [11] Deep groove ball bearing | [44] Deep groove ball bearing | [118] Washer                  | [162] Tooth lock washer     |
| [15] Cap screw                | [90] Foot                     | [119] Cap screw               | [219] Hex nut               |
| [16] Stator                   | [93] Washer                   | [122] Tooth lock washer       | [250] Oil seal              |
| [19] Cap screw                | [94] Cap screw                | [123] Hex head screw          | [604] Lubrication ring      |
| [21] Oil seal flange          | [100] Hex nut                 | [124] Tooth lock washer       | [608] Oil seal flange       |
| [22] Hex head screw           | [103] Stud                    | [128] Serrated lock washer    | [609] Oil seal              |
| [24] Lifting eyebolt          | [105] Cup spring              | [129] Screw plug              | [705] Canopy                |
| [25] Cap screw                | [106] Oil seal                | [131] Gasket for cover        | [706] Spacer bolt           |
| [26] Shield ring              | [107] Oil flinger             | [132] Terminal box cover      | [707] Hex head screw        |
| [30] Oil seal                 | [108] Nameplate               | [134] Screw plug              | [715] Hex head screw        |
| [31] Key                      | [109] Grooved pin             | [139] Hex head screw          |                             |
| [32] Retaining ring           | [111] Gasket for lower part   | [140] Washer                  |                             |

### 3.7 Nameplate

#### 3.7.1 EDR../EDRN.. motor nameplate

The following figure shows an example nameplate of a motor:

9007219506832651

| Line | Information                                                                                                                                                                                                                                                                                                       |

3.7.4 Nameplate of motors with approval for the Republic of Korea

- [1] KCs logo
- [2] Local approval authority KOSHA
- [3] Explosion protection marking according to Korean standard
- [4] Certificate numbers gas and dust

In addition to the markings according to IEC/IECEX, the nameplate also has the KCs logo (Korea Certification safety) with certificate number and the markings of Korean explosion protection. If necessary, the nameplate also has the KEL (Korean Energy Label).

If a motor may be operated on the inverter, the motor is equipped with an additional nameplate with inverter data. The corresponding certificate numbers of KOSHA are indicated on the additional nameplate.

# 3 Motor structure

Nameplate

## 3.7.5 Markings

The following table lists all the markings that can be provided on a nameplate or attached to the motor, and an explanation of what they mean.

|                                                                                     |                                                                                                                                                                                                                                                                                            |
|-------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|    | IECEX conformity marking. Confirmation of the conformity by a notified authority (PTB in Braunschweig, Germany)                                                                                                                                                                            |
|    | Conformity marking INMETRO. Confirmation of the conformity for Brazil by DNV in São Paulo, Brazil.                                                                                                                                                                                         |
|    | KC mark of conformity (Korea Certification). Confirmation of the conformity for Korea by KOSHA in Ulsan, REPUBLIC OF KOREA.                                                                                                                                                                |
|    | FS logo with 2-digit number for identification of installed functional safety motor options.                                                                                                                                                                                               |
|   | For operation with an inverter or at ambient temperatures > 40 °C, cable entries and cables must be used that are suited for temperatures of ≥ 90 °C. The used cables must be selected regarding their temperature resistance according to standard requirements and operating conditions. |
|  | Do not connect, disconnect or open the connector of the cone shaft encoder in potentially explosive atmospheres. Make sure no dust or humidity enters the wiring space of the encoder while it is open.                                                                                    |

## Special indication "X"

If the special indication "X" appears after the certificate number on the Certificate of Conformity (IECEX CoC), this indicates the certificate contains special conditions for the safe application of the motors.

For motors of the equipment protection level b, inverter operation is regarded as a special operating condition. For this reason, the certificate number is followed by the special indication "X". The special operating conditions include the permitted speed range as well as the inverter properties defined in the IECEX Certificate of Conformity (IECEX CoC).

## 3.7.6 Serial number

The following table lists the structure of a serial number:

| Example: 01. 12212343 01. 0001. 18 |                         |
|------------------------------------|-------------------------|
| 01.                                | Sales organization      |
| 12212343                           | Order number (8 digits) |
| 01.                                | Order item (2 digits)   |
| 0001                               | Quantity (4 digits)     |

31555454/EN – 11/2023

|                                    |                                                  |
|------------------------------------|--------------------------------------------------|
| Example: 01. 12212343 01. 0001. 18 |                                                  |
| 18                                 | End digits of the year of manufacture (2 digits) |

### 3.8 Motor type designations

The following diagram shows the structure of the motor type designation:

| <b>EDRN80M4 /BE2 /FI /3GD-c /KCC /TF /ES7S</b> |                                      |
|------------------------------------------------|--------------------------------------|
| <b>E</b>                                       | Explosion-protected design           |
| <b>DR</b>                                      | Product family                       |
| <b>N</b>                                       | Code for product line identification |
| <b>80M</b>                                     | Size and length                      |
| <b>4</b>                                       | Number of poles                      |
| <b>/BE2</b>                                    | Brake                                |
| <b>/FI</b>                                     | Output designs                       |
| <b>/3GD-c</b>                                  | Explosion protection design          |
| <b>/KCC</b>                                    | Alternative connections              |
| <b>/TF</b>                                     | Thermal motor protection             |
| <b>/ES7S</b>                                   | Encoder                              |

#### 3.8.1 Designation of the motors

|                                       |                                                                            |
|---------------------------------------|----------------------------------------------------------------------------|
| EDRS..                                | Explosion-protected AC motor, standard efficiency IE1                      |
| EDRE..                                | Explosion-protected AC motor, high efficiency IE2                          |
| EDRN..                                | Explosion-protected AC motor, premium efficiency IE3                       |
| 63 – 315                              | Sizes:<br>63, 71, 80, 90, 100, 112, 132, 160, 180, 200, 225, 250, 280, 315 |
| K, S, MK, MS, M, ME, LS, LM, L, LC, H | Lengths                                                                    |
| 4                                     | Number of poles                                                            |

## 3.9 Designs and options

### 3.9.1 Explosion-protected motors

The following table shows the relation between the design and the equipment protection level /EPL:

| Design | Equipment protection level according to IEC 60079-0 <sup>1)</sup> |
|--------|-------------------------------------------------------------------|
| /2G-b  | Gb                                                                |
| /2D-b  | Db                                                                |
| /2GD-b | Gb, Db                                                            |
| /3G-c  | Gc                                                                |
| /3D-c  | Dc                                                                |
| /3GD-c | Gc, Dc                                                            |

1) The abbreviation "EPL" stands for "Equipment Protection Level".

### 3.9.2 Output types

The following table shows possible output designs:

| Designation | Design                                       | Option                                                  |
|-------------|----------------------------------------------|---------------------------------------------------------|
| /FI         | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | IEC foot-mounted motor                                  |
| /F.A, /F.B  |                                              | Universal foot-mounted motor                            |
| /FG         |                                              | 7-series integral motor, as stand-alone motor           |
| /FF         |                                              | IEC flange-mounted motor with bore                      |
| /FT         |                                              | IEC flange-mounted motor with threads                   |
| /FL         |                                              | General flange-mounted motor (other than IEC)           |
| /FM         |                                              | 7-series integral motor with IEC feet                   |
| /FE         |                                              | IEC flange-mounted motor with bore and IEC feet         |
| /FY         |                                              | IEC flange-mounted motor with thread and IEC feet       |
| /FK         |                                              | General flange-mounted motor (other than IEC) with feet |

### 3.9.3 Mechanical attachments

The following table shows possible mechanical attachments:

| Designation | Design                                       | Option                                         |
|-------------|----------------------------------------------|------------------------------------------------|
| /BE..       | /3G-c, /3D-c, /3GD-c                         | Spring-loaded brake with specification of size |
| HR          |                                              | Manual brake release of the brake, re-engaging |
| HF          |                                              | Manual brake release, lockable                 |
| /RS         | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Backstop                                       |

### 3.9.4 Temperature sensor/temperature detection

The following table shows the thermal protection options:

| Designation | Design                                       | Option                                              |
|-------------|----------------------------------------------|-----------------------------------------------------|
| /TF         | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Temperature sensor (PTC thermistor or PTC resistor) |
| /KY         |                                              | Temperature sensor KTY84 – 130                      |
| /PK         |                                              | Pt1000 temperature sensor                           |
| /PT         |                                              | 1 or 3 Pt100 temperature sensors                    |

### 3.9.5 Encoders

The following table shows possible encoder designs:

| Designation                                                        | Design               | Option                                                                                                                     |
|--------------------------------------------------------------------|----------------------|----------------------------------------------------------------------------------------------------------------------------|
| /EK8S <sup>1)</sup> , /EK8R,<br>/EK8C                              | /3G-c, /3D-c, /3GD-c | Incremental encoder                                                                                                        |
| /AK8Y <sup>1)</sup> , /AK8W <sup>1)</sup>                          |                      | Multi-turn absolute encoder                                                                                                |
| /EV8S, /EV8R,<br>/EV8C                                             |                      | Incremental encoder                                                                                                        |
| /AV8Y, /AV8W                                                       |                      | Multi-turn absolute encoder                                                                                                |
| /ES7S <sup>1)</sup> , /EG7S <sup>1)</sup> ,<br>/EH7S               |                      | Add-on speed sensor with sin/cos interface                                                                                 |
| /EV7S                                                              |                      | Add-on speed sensor ES7S with sin/cos interface, spread shaft via mounting adapter for third-party encoders                |
| /ES7R, /EG7R,<br>/EH7R                                             |                      | Add-on speed sensor with TTL (RS422) interface                                                                             |
| /EV7R                                                              |                      | Add-on speed sensor ES7S with TTL (RS422) interface, spread shaft via mounting adapter for third-party encoders            |
| /ES7C, /EG7C,<br>/EH7C                                             |                      | Add-on speed sensor with HTL interface                                                                                     |
| /EV7C                                                              |                      | Add-on speed sensor ES7S with HTL and interface, spread shaft via mounting adapter for third-party encoders                |

| /AV7Y                                                              |                      | Add-on absolute encoder AS7Y with SSI interface (multi-turn), spread shaft via mounting adapter for third-party encoders   |
| /ES7A /EG7A                                                        |                      | Mounting adapter for speed sensors with solid shaft                                                                        |
| /EH7T                                                              |                      | Add-on speed sensor with TTL (RS422) interface                                                                             |
| /XV.A                                                              |                      | Mounting adapter for third-party speed sensors                                                                             |
| /XV..                                                              |                      | Mounted third-party speed sensors                                                                                          |

1) Also available in design for functional safety

### 3.9.6 Connection options

The following table shows designs of the power connection. Designs with terminal board do not have an extra type designation.

| Designation | Design                                       | Included in the delivery                         |
|-------------|----------------------------------------------|--------------------------------------------------|
| /KCC        | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Terminal strip with cage clamps                  |
| None        | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Terminal strip with cage clamps only with EDRN63 |
| None        | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Terminal board                                   |

**3.9.7 Storage**

The following table shows possible bearings for motors:

| Designation | Design                                       | Option                                                        |
|-------------|----------------------------------------------|---------------------------------------------------------------|
| /NS         | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Relubrication device                                          |
| /ERF        |                                              | Reinforced bearings on A-side with cylindrical roller bearing |
| /NIB        |                                              | Insulated bearing B-side                                      |

**3.9.8 Ventilation**

The following table shows possible ventilation variants:

| Designation | Design                                       | Option                 |
|-------------|----------------------------------------------|------------------------|
| /VE         | /3G-c, /3D-c, /3GD-c                         | Forced cooling fan     |
| /AL         | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Metal fan              |
| None        | /2G-b, /3G-c                                 | Standard fan (plastic) |
| /C          | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Canopy for fan guard   |

**3.9.9 Other additional features**

The following table shows further additional feature:

| Designation | Design                                       | Option                        |
|-------------|----------------------------------------------|-------------------------------|
| /2W         | /2G-b, /2D-b, /2GD-b<br>/3G-c, /3D-c, /3GD-c | Second shaft end on the motor |

### 3.10 Functional safety

Motors from SEW-EURODRIVE are optionally available with functionally safe motor options. These are designed for implementing safety functions.

SEW-EURODRIVE labels a functionally safe motor option at the drive with an FS logo and a 2-digit number on the motor nameplate. The number is a code that indicates which components in the drive are safety-related. This allows for unique identification of an available functionally safe motor option via the motor nameplate.

| FS logo                                                                             | Available functionally safe motor option |              |                |
|-------------------------------------------------------------------------------------|------------------------------------------|--------------|----------------|
|                                                                                     | Decentralized in-verters                 | Safety brake | Safety encoder |
|    | X                                        |              |                |
|    |                                          | X            |                |
|    |                                          |              | X              |
|   | X                                        |              | X              |
|  |                                          | X            | X              |

If the "FS" logo, e.g. with the code "FS 11" is present on the motor nameplate, the combination of safety encoder and safety brake is available at the motor. If an FS logo is available, adhere to the information specified in the corresponding documentation.

If the drive bears the FS logo on the nameplate, adhere to the information in the following document:

- Addendum to the operating instructions "Safety Encoders and Safety Brakes, AC Motors DR., DRN., DR2., EDR., EDRN. – Functional Safety"

To determine the safety level for systems and machines yourself, refer to the characteristic safety values in chapter "Characteristic safety values".

## 4 Mechanical installation

### 4.1 Before you start

#### INFORMATION

Observe the safety notes in chapter 2 of this documentation for the mechanical installation.

#### INFORMATION

The mounting position for installation must correspond with the specifications on the nameplate.

Make sure that the following requirements are met before you start installing the unit:

- The specifications on the nameplate of the drive correspond to the supply system or the output voltage of the inverter.
- The drive is undamaged (no damage caused by transportation or storage).
- All transport protection has been removed.
- The following provisions are met:

- Ambient temperature as specified on the nameplate.

Note that the temperature range of the gear unit may also be restricted (see "Gear unit" operating instructions).

Also observe the deviating information on the nameplate.

- The drive must not be exposed to oils, acids, gases, vapors, radiation, etc. Otherwise, the drive needs to be explicitly designed for these ambient conditions.
- The installation altitude is max. 1000 m above sea level.

Observe the section "Designated use" in chapter 2.

- Make sure all mounted options (such as encoders or brakes) are suitable for the ambient conditions.

The aforementioned information refers to standard orders. The conditions might be different when you order drives other than the standard. Refer to the order confirmation for deviating conditions.

Functional safety

If the drive has the FS logo on the nameplate, observe the information on mechanical installation in the corresponding addendum to the operating instructions.

## 4.2 Preliminary work after longer periods of storage

Depending on the duration and ambient conditions during storage, corrosion, aging of lubricants, embrittlement of sealing elements, and moisture absorption in the insulation can occur.

Perform the measures described below on any drives that have been stored for longer than 9 months.

### Corrosion

1. Check for damage to the motor and/or components (coating, shafts, connection and fastening parts).
2. Correct the corrosion damage.

### Embrittlement of seals

3. Visually inspect seals and look for fissures, hardening, and embrittlement.
4. Replace any damaged seals.

### Reduced grease service life

If the drives are stored for longer than a year, the service life of the bearing grease is reduced due to aging and de-oiling of the lubricant.

5. Check the condition and usability of the rolling bearings.
6. Replace any damaged rolling bearings.

### Reduced grease quantity

7. If motors with relubrication devices are stored for longer than 5 years, relubricate the motor as specified on the lubrication plate.

### Moisture absorption

8. Check to see that the wiring space of the motor is dry and clean.
9. Remove moisture and dirt.
10. If the motor has absorbed moisture, measure the insulation resistance (see chapter "Measuring the insulation resistance" (→ 36)) and dry the motor (see chapter "Drying the electric cylinder" (→ 37)).

### 4.2.1 Checking the brake

If motors with brake have been stored or non-operational for longer than 9 months, check their function before taking them into operation.

**4.2.2 Measuring the insulation resistance**

The insulation resistance (see following figure) varies greatly depending on the temperature.

If the measured resistance is within the range of the limit characteristic curve (depending on the ambient temperature), the insulation resistance is sufficient. If the value is below the limit characteristic curve, dry the motor.

18014398682805003

### 4.2.3 Drying the electric cylinder

#### Drying the motor with warm air

1. Dry the motor with warm air.
2. End the drying process when the minimum insulation resistance is exceeded.

#### Drying the motor with an isolation transformer

1. Connect the windings in series.
2. Auxiliary AC voltage supply max. 10% of the nominal voltage with max. 20% of the rated current.

Connect the windings in series: Wiring diagram R13

### 4.3 Motor installation notes

Observe the following when setting up the motor:

#### ⚠ CAUTION

Sharp edges due to open keyway.

Risk of cutting injuries.

- Insert the key into the keyway.
  - Pull a protective tubing over the shaft.
- 
- Remove any anti-corrosion agent and dirt from motor shaft ends and flange surfaces. Use a commercially available solvent. Do not allow the solvent to come in contact with the bearings or sealing rings.
  - The mounting position for installation must correspond with the specifications on the nameplate.
  - Only install the gearmotor in the specified mounting position on a level, vibration-free and torsionally rigid support structure.
  - Make sure the customer's counter-bearing is unobstructed and can move freely.
  - Align the motor and the driven machine carefully in order to prevent the output shaft from being exposed to unacceptable strain. Observe the permitted overhung and axial forces.
  - Do not jolt or hammer the shaft end.
  - Balance components for subsequent mounting on the shaft with a half key (motor shafts are balanced with a half key).
  - Make sure that there is sufficient clearance around the motor to provide for adequate cooling air supply, and that the motor does not draw in warm exhaust air from other units. Observe the minimum distances specified in chapter "Cooling air supply distances" (→ 38).

#### 4.3.1 Cooling air supply distances

2963373195

| Motors                        | h in mm |
|-------------------------------|---------|
| EDR..71 – 80, EDRN63 – 80     | 15      |
| EDRE90 – 100, EDRN90 – 100    | 20      |
| EDRE112 – 132, EDRN112 – 132S | 25      |
| EDRE160, EDRN132M/L           | 30      |
| EDRE180, EDRN180              | 35      |

| Motors                       | h in mm |
|------------------------------|---------|
| EDRE200 – 225, EDRN200 – 225 | 45      |
| EDRE250 – 280, EDRN250 – 280 | 50      |
| EDRE315, EDRN315             | 55      |

#### 4.3.2 Using belt pulleys

The following conditions must be met when using belt pulleys:

- Use only belts that do not build up an electrostatic charge.
- Do not exceed the maximum permitted overhung load.

#### 4.3.3 Cover for motors in vertical mounting position

Motors in vertical mounting position with the motor output shaft pointing upwards or downwards (e.g. M4/V1 or M2/V3 mounting positions) must be equipped with a cover to prevent objects from falling into the drive. The cover must meet the following conditions:

- Requirements according to IEC 60079-0 and/or IEC 60079-7.
- The cover must not obstruct the supply of cooling air.

#### 4.3.4 Mounting the motor with aluminum feet

To mount motors with a foot made of aluminum, you have to use washers with an outer diameter that is at least twice the screw diameter (e.g. DIN EN ISO 7090).

Use bolts of strength class 8.8 up to max. 10.9.

Tightening torque according to VDI 2230-1.

| Motors         | Maximum permitted screw lengths |
|----------------|---------------------------------|
| EDRN63 – 71    | M6 × 25                         |
| EDRN80 – 90    | M10 × 25                        |
| EDRN100 – 132S | M10 × 25                        |

#### 4.3.5 Installation in damp locations or outdoors

- Use suitable cable glands for the incoming cable (use reducing adapters if necessary) according to the installation instructions.
- If possible, arrange the terminal box in such a way that the cable entries are pointing downwards.
- Seal the cable entry properly.
- Clean the sealing surfaces of the terminal box and the terminal box cover carefully before re-assembly; replace embrittled gaskets.
- If required, touch up the corrosion protection (especially at the eyebolts).
- Check the degree of protection.
- Protect the shaft against corrosion using a suitable anti-corrosion agent.

#### 4.4 Installation tolerances

| Shaft end                                                                                                                                                                                                                                                                                                                                                 | Flanges                                                                                                                                                                                                             |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Diameter tolerance according to EN 50347 <ul style="list-style-type: none"> <li>• ISO j6 with <math>\varnothing \leq 28</math> mm</li> <li>• ISO k6 with <math>\varnothing \geq 38</math> mm up to <math>\leq 48</math> mm</li> <li>• ISO m6 with <math>\varnothing \geq 55</math> mm</li> <li>• Centering bore according to DIN 332, shape DR</li> </ul> | Centering shoulder tolerance according to EN 50347 <ul style="list-style-type: none"> <li>• ISO j6 with <math>\varnothing \leq 250</math> mm</li> <li>• ISO h6 with <math>\varnothing \geq 300</math> mm</li> </ul> |

#### 4.5 Assembling the input elements

Drive components that are installed on the motor shaft end, e.g. pinions, must be warmed up prior to assembly in order to prevent damage, e.g. to the encoder of stand-alone motors.

##### **⚠ WARNING**

Unsecured key skidding out of the keyway.

Severe or fatal injuries due to flying parts.

- Only operate the motor with attached customer output element (e.g. gear unit), or with a suitably secured key.

##### **⚠ WARNING**

Generating of sparks due to unsecured key.

Severe or fatal injuries from explosion.

- Only operate the motor with attached customer output element (e.g. gear unit), or with a suitably secured key.

## 4.6 Encoder mounting adapter

If a drive was ordered with encoder mounting adapter, SEW-EURODRIVE will deliver the drive with enclosed coupling. Do not connect the coupling for operation without the encoder.

### 4.6.1 Encoder mounting adapter XV../EV.. for EDR..71 – 225, EDRN71 – 225 motors

If you have ordered the XV.. or EV.. encoder mounting adapter, the adapter [A] and the coupling [B – E] are enclosed with the motor and are to be assembled by the customer.

The following figure shows how to assemble the coupling and the adapter:

9007202887904779

|       |                                     |       |                                            |
|-------|-------------------------------------|-------|--------------------------------------------|
| [22]  | Screw                               | [361] | Safety cover                               |
| [170] | Forced cooling fan guard            | [269] | Cable grommet                              |
| [212] | Fan guard with encoder mount        | [A]   | Adapters                                   |
| [220] | Encoder                             | [B]   | Retaining screw                            |
| [225] | Intermediate flange (XV1A)          | [C]   | Central retaining screw                    |
| [232] | Screws (XV1A, XV2A)                 | [D]   | Coupling (spread- or solid shaft coupling) |
| [251] | Conical spring washers (XV1A, XV2A) | [E]   | Retaining screw                            |
|       |                                     | [226] | Screw                                      |

### Mounting encoders to encoder mounting adapters XV../EV.. at EDR..71 – 225, EDRN71 – 225 motors

1. Remove the safety cover [361], or the forced cooling fan if required.
2. **For XV2A, XV3A, and XV4A:** Remove the intermediate flange [225].
3. Screw the coupling [D] to the bore at the shaft end using screw [C].
4. Plug the adapter [A] onto the pin of the encoder [220].
5. Tighten the central retaining screw [B].
6. **For XV2A, XV3A, XV4A:** Mount the intermediate flange [225] using the screws [226].
7. Plug the encoder [220] with adapter [A] onto the coupling [D].
8. Tighten the retaining screw [E].
9. **For XV1A, XV2A:** Re-install the retaining screws [232] with conical spring washers.
10. **For XV3A, XV4A:** Installed by the customer via bores in the encoder plate.

| Motor                            | Screw | Tightening torque |
|----------------------------------|-------|-------------------|
|                                  |       | Nm                |
| EDR..71 – 132<br>EDRN71 to 132S  | [C]   | 3                 |
| EDR..160 – 225<br>EDRN132M – 225 | [C]   | 8                 |
| EDR..71 – 225<br>EDRN71 – 225    | [226] | 3                 |
| EDR..71 – 225<br>EDRN71 – 225    | [B]   | 3                 |
| EDR..71 – 225<br>EDRN71 – 225    | [E]   | 3                 |
| EDR..71 – 225<br>EDRN71 – 225    | [232] | 3                 |

#### 4.6.2 XV../EV.. encoder mounting adapter to EDR..250 – 280, EDRN250 – 280 motors

If you have ordered the XV../EV.. encoder mounting adapter, the coupling [233] is enclosed with the motor and must be installed by the customer.

The following figure shows an example of how the coupling is installed:

18014406225445899

|       |                                     |        |                            |
|-------|-------------------------------------|--------|----------------------------|
| [22]  | Screw                               | [361]  | Safety cover (normal/long) |
| [33]  | Washer                              | [1458] | Screw                      |
| [34]  | Screw                               | [1459] | Cage nut                   |
| [35]  | Fan guard                           | [1460] | Serrated lock washer       |
| [220] | Encoder                             | [1461] | Washer                     |
| [225] | Intermediate flange (optional)      | [1462] | Screw                      |
| [226] | Screw                               | [1489] | Ground strap               |
| [232] | Screws (.V1A, .V2A)                 | [1496] | Serrated lock washer       |
| [233] | Coupling                            | [1497] | Washer                     |
| [251] | Conical spring washers (.V1A, .V2A) | [1498] | Screw                      |
| [269] | Cable grommet                       | [A]    | Encoder mounting adapter   |

### Mounting encoders in XV../EV.. encoder mounting adapter to EDR..250 – 280, EDRN250 – 280 motors

1. Remove the safety cover [361], or the forced cooling fan if required.
2. Place the coupling [233] onto the pin of the encoder mounting adapter [A].
3. Tighten the screw of the coupling [233] via the slots in the encoder mounting adapter.
4. **For XV2A, XV3A, XV4A:** Mount the intermediate flange [225] to the encoder mounting adapter [A] using screw [226].
5. **For XV1A, XV2A:** Insert the screws [232] with eccentric disk spring washers [251] in the encoder mounting adapter [A].
6. Fasten the encoder [220] to the encoder mounting adapter [A] or the intermediate flange [225].
7. Plug the encoder [220] into the coupling [233].
8. To secure the eccentric disks [251], insert the screws [232].
9. **For XV1A, XV2A:** Tighten the screws [232] while turning the eccentric disks [251] in clockwise direction into the groove of the encoder [220].
10. Tighten the screw of the coupling [233].
11. Insert the encoder cable into the cable grommet [269].
12. Insert the cable grommet [269] into the recess of the safety cover [361] or the forced cooling fan.
13. Mount the safety cover [361] onto the forced cooling fan.

| Motor                            | Screw                       | Tightening torque |
|----------------------------------|-----------------------------|-------------------|
|                                  |                             | Nm                |
| EDR..250 – 280<br>EDRN250 – 280  | Screw of the coupling [233] | 3.3 Nm            |
| EDR..250 – 280<br>EDRN250 to 280 | [226]                       | 3.3 Nm            |
| EDR..250 – 280<br>EDRN250 – 280  | [232]                       | 2.25 Nm           |

#### 4.6.3 XH.A encoder mounting adapter

The XH1A, XH7A and XH8A encoder mounting adapters for hollow shaft encoders are premounted on delivery.

To mount the encoder, proceed as described in chapter "Motor and brake maintenance – preliminary work" (→ 154).

## 4.7 Terminal box

### 4.7.1 Turning the terminal box – tightening torques

The following table shows all the tightening torques required for this procedure:

| Motor                                                              | Screw/bolt        | Tightening torque |
|--------------------------------------------------------------------|-------------------|-------------------|
|                                                                    |                   | Nm                |
| M6 stud                                                            | [115]/[1213]      | 3                 |
| M8 stud                                                            |                   | 6                 |
| M12 stud                                                           |                   | 15.5              |
| M16 stud                                                           |                   | 30                |
| EDRN63                                                             | [113]             | 2                 |

| EDR..71 – 315, EDRN71 – 315                                        | [137]/[629]/[632] | 2                 |

#### 4.7.2 Turning the terminal box with cage clamp power connection /KCC

The following figure shows the terminal box option with cage clamps /KCC:

45035999025947915

- [111] Gasket
- [113] Pan head screw for mounting rail installation
- [117] Hex head screw for grounding inside
- [119] Terminal box retaining screws + lock washers (4 x each)
- [123] Terminal box cover retaining screws + lock washers (4 x each)
- [131] Gasket
- [137] Screw for option terminal/rectifier
- [139] Hex head screw for grounding outside
- [b] Terminal strip 1 with screws and nuts
- [a] Terminal strip 2 + retaining plate
- [452] Power terminal
- [629]/[632] Screw

Proceed as follows to turn the terminal box:

1. Loosen the screws [123] of the terminal box cover. Remove the terminal box cover.
2. Remove the screws [629]/[632].
3. Remove the terminal [b].
4. Remove the retaining screws [119] of the terminal box.
5. Clean the sealing surfaces at the stator shoulder, terminal box lower part and terminal box cover.

6. Check the gaskets [111] and [131] for damage.
7. Replace any damaged gaskets.
8. **▲ DANGER!** Electric shock due to damaged cables. Severe or fatal injuries. When installing the terminal box lower part or the terminal board, make sure the cables are not crushed or twisted. Do not use sharp or pointed objects to align the cables.  
Turn the terminal box to the required position.
9. Make sure that the gasket [111] is positioned correctly.
10. Attach the terminal box lower part.
11. Place the washers under the screws [119] and tighten the screws [119] of the lower part of the terminal box with the respective tightening torque.
12. Refer to chapter "Appendix" (→ 257) for the arrangement of the auxiliary terminals.
13. Secure terminal [b] with screws [629]/[632].
14. Make sure that the gasket [131] is positioned correctly.
15. Attach the terminal box cover to the terminal box lower part.
16. Place the washers under the screws [123] and tighten the screws [123] of the terminal box cover with the respective tightening torque.
17. To make sure that the cables have not been damaged, perform an insulation test after reassembly, see chapter "Preliminary work after longer periods of storage" (→ 35).

#### 4.7.3 Turning the terminal box with terminal board and anti-twist frame

The following figure shows a terminal box with anti-twist frame:

Terminal stud M6/M8 in aluminum or gray cast iron design

Terminal stud M12S in gray cast iron design

- [2] Terminal stud nut
- [111] Gasket
- [115/] Kit (1 anti-twist frame, 1 terminal board, 4 sleeves, 2 screws, 2 nuts)
- [1213]
- [117] Hex head screw for grounding inside
- [119] Terminal box retaining screws + lock washers (4 × each)
- [123] Terminal box cover retaining screws + lock washers (4 × each)
- [131] Gasket
- [140] Hex head screw for grounding outside
- [1222] Spacer bushing
- [a] Terminal strip 1
- [a1] Screw for option terminal/rectifier
- [a2] Flat head screw option terminal

Proceed as follows to turn the terminal box:

1. Loosen the screws [123] of the terminal box cover. Remove the terminal box cover.
2. If available, remove the terminals [262]/[615].
3. Remove the retaining screws [119] of the terminal box.

4. Clean the sealing surfaces at the stator shoulder, terminal box lower part and terminal box cover.
5. Check the gaskets [111] and [131] for damage.
6. Replace any damaged gaskets.
7. Loosen any cables that have already been connected to the terminal board.
8. Remove the terminal board with anti-twist frame from the terminal box.
9. **▲ DANGER!** Electric shock due to damaged cables. Severe or fatal injuries. When installing the terminal box lower part or the terminal board, make sure the cables are not crushed or twisted. Do not use sharp or pointed objects to align the cables.  
Turn the terminal box to the required position.
10. Make sure that the gasket [111] is positioned correctly.
11. Attach the terminal box lower part.
12. Turn the terminal board with anti-twist frame like the terminal box.
13. Install the spacer bushings [1222] below the terminal board.
14. Insert the terminal board with anti-twist frame again. The terminal board designations U1, V1 and W1 must be pointing towards the cable outputs afterwards.
15. Place the washers under the screws [119] and tighten the screws [119] of the lower part of the terminal box with the respective tightening torque.
16. Secure terminal [b] with screws [629]/[632].
17. Reconnect any removed cables according to the following table.

| Yellow | White | Brown | Black | Red   | Blue  |
|--------|-------|-------|-------|-------|-------|
| W2/T4  | U2/T5 | V2/T6 | U1/T1 | V1/T2 | W1/T3 |

18. Tighten the nuts of the terminal studs with the respective tightening torque.
19. Make sure that the gasket [131] is positioned correctly.
20. Attach the terminal box cover to the terminal box lower part.
21. Place the washers under the screws [123] and tighten the screws [123] of the terminal box cover with the respective tightening torque.
22. To make sure that the cables have not been damaged, perform an insulation test after reassembly, see chapter "Preliminary work after longer periods of storage" (→ 35).

#### 4.7.4 Turning the terminal box with and without anti-twist frame for EDR..250 – 315, EDRN250 – 315 motors

The following figure shows an example of the terminal box structure:

**M12S terminal stud with anti-twist frame in gray**    **M16 terminal stud without anti-twist frame in gray cast iron design**

- [2] Terminal stud nut
- [111] Gasket
- [117] Hex head screw for grounding inside
- [119] Terminal box retaining screws + lock washers (4 × each)
- [123] Terminal box cover retaining screws + lock washers (4 × each)
- [131] Gasket
- [140] Hex head screw for grounding outside
- [1222] Spacer bushing
- [a] Terminal strip 1
- [a1] Screw for option terminal/rectifier
- [b] Terminal strip
- [b1] Screw option terminal

Proceed as follows to turn the terminal box:

1. Loosen the screws [123] of the terminal box cover. Remove the terminal box cover.
2. If available, remove the terminals [262]/[615].
3. Remove the retaining screws [119] of the terminal box.

4. Clean the sealing surfaces at the stator shoulder, terminal box lower part and terminal box cover.
5. Check the gaskets [111] and [131] for damage.
6. Replace any damaged gaskets.
7. Loosen any cables that have already been connected to the terminal board.
8. **⚠ DANGER!** Electric shock due to damaged cables. Severe or fatal injuries. When installing the terminal box lower part or the terminal board, make sure the cables are not crushed or twisted. Do not use sharp or pointed objects to align the cables.  
Turn the terminal box to the required position.
9. Make sure that the gasket [111] is positioned correctly.
10. Attach the terminal box lower part.
11. Place the washers under the screws [119] and tighten the screws [119] of the lower part of the terminal box with the respective tightening torque.
12. Secure terminal [b] with screws [629]/[632].
13. Reconnect any removed cables according to the following table.

| Yellow | White | Brown | Black | Red   | Blue  |
|--------|-------|-------|-------|-------|-------|
| W2/T4  | U2/T5 | V2/T6 | U1/T1 | V1/T2 | W1/T3 |

14. Tighten the nuts of the terminal studs with the respective tightening torque.
15. Make sure that the gasket [131] is positioned correctly.
16. Attach the terminal box cover to the terminal box lower part.
17. Place the washers under the screws [123] and tighten the screws [123] of the terminal box cover with the respective tightening torque.
18. To make sure that the cables have not been damaged, perform an insulation test after reassembly, see chapter "Preliminary work after longer periods of storage" (→ 35).

#### 4.8 Coating

SEW-EURODRIVE delivers the drives with a painting that complies with the requirements for preventing electrostatic charging according to IEC 60079-0.

#### **⚠ WARNING**

Risk of explosion due to electrostatic charge and sparks caused by improper painting.

Severe or fatal injuries from explosion.

- If the motor is repainted, observe the requirements for painting to avoid electrostatic charge according to IEC 60079-0.
-

## 4.9 Retrofitting (option /F.A) or modifying (option /F.B) motor feet

### 4.9.1 EDRN63 – 132S motors

The following figure shows a motor with option /F.A (retrofit foot).

22845053579

- ✓ The contact surfaces at the foot [90] and stator [16] are painted.
- 1. Observe the following figure when selecting the contact surfaces. The figure illustrates the possible terminal box positions with reference to the retrofittable motor feet.

22845056011

- 2. Remove the paint from the stator [16] contact surface where the foot is to be screwed on.
- 3. Apply a thin layer of corrosion protection to the contact surfaces after the paint has been removed.
- 4. Remove the paint from the contact surfaces of the foot [90].

5. Apply a thin layer of corrosion protection to the contact surfaces after the paint has been removed.
6. Attach the foot [90] to the motor using the screws [94] and washers [91]. Tighten the screws in diametrically opposite sequence. The screws are micro-encapsulated. This is why you have to screw in and tighten the screws quickly.
7. If necessary, you can apply paint or corrosion protection at the joint after attaching the foot [90].

### Changing the motor foot position

For converting the motor foot to another position, observe the following points:

- After removing the screws [94], check for damage to the thread or other similar damage.
- When changing the position of the motor foot, apply corrosion protection to unpainted surfaces.

### Tightening torques

| Motor          | Screw | Tightening torque |
|----------------|-------|-------------------|
| EDRN63 – 90    | M6    | 11.3 Nm           |
| EDRN100 – 132S | M8    | 27.3 Nm           |

#### 4.9.2 EDR..250 – 315, EDRN225 – 315 motors

The following figure shows a motor with option /F.A (retrofit feet).

[90] Foot

Remove the paint from the marked surfaces.

- ✓ The tapped holes of the foot mounting surfaces are closed with set screws [1457]. The contact surfaces at the feet [90] and stator [16] are painted.
- 1. Observe the following figure when selecting the contact surfaces. The figure illustrates the possible terminal box positions with reference to the retrofittable motor feet.

- 2. Remove the set screws [1457] from those threads into which you will screw the foot screws [94].
  - ⇒ Size 225 – 280: 8 set screws
  - ⇒ Size 315: 12 set screws
- 3. Remove the paint from the contact surfaces of the stator [16] where the feet are to be screwed on.
  - ⇒ Size 225 – 280: 8 surfaces
  - ⇒ Size 315: 12 surfaces
- 4. Apply a thin layer of corrosion protection to the contact surfaces after the paint has been removed.
- 5. Remove the paint from the contact surfaces of the feet [90].
- 6. Apply a thin layer of corrosion protection to the contact surfaces after the paint has been removed.
- 7. Attach the feet [90] to the motor using the screws [94] and washers [93]. The screws are micro-encapsulated. This is why you have to screw in and tighten the screws quickly.
- 8. Apply paint or corrosion protection at the parting line after attaching the feet [90].

**Changing motor feet positions**

9007206996709387

[16] Stator

[90] Foot

[93] Washer

[94] Screw

For converting the motor feet to another position, observe the following points:

- After removing the screws [94], check for damage to the thread or other similar damage.
- Remove the old micro-encapsulation.
- Clean the threads of the screws [94].
- Apply a high-strength thread locker to the screw threads [94] before inserting the screws again.
- The set screws removed from the new mounting position can be reused for the bores of the old mounting position. After inserting the set screw [1457] into the open tapped holes in the stator [16], paint or corrosion protection can be applied on the bare joining surfaces of the stator.
- When the position of the motor feet is changed, apply corrosion protection to the unpainted surfaces.

**Tightening torques**

| Motor            | Screw | Tightening torque |
|------------------|-------|-------------------|
| EDRN225          | M16   | 230 Nm            |
| EDR..250/EDRN250 | M20   | 464 Nm            |
| EDR..280/EDRN280 | M20   | 464 Nm            |
| EDR..315/EDRN315 | M20   | 464 Nm            |

## 4.10 Options

### 4.10.1 /HR, /HF Manual brake release

The option manual brake release /HR, /HF is preinstalled and set at the factory for some brake sizes. If your drive was not delivered with manual brake release and you wish to retrofit it, observe the instructions in chapter "Retrofitting the /HR, /HF manual brake release" (→ 211).

#### Activating and loosening the /HF manual brake release

#### **⚠ WARNING**

No brake function due to activated manual brake release.

Severe or fatal injuries.

- Before startup, make sure that the hand lever has been removed or secured against unintentional activation to prevent unintentional brake release during operation.

You can use the option /HF (lockable manual brake release) to continuously mechanically release the BE.. brake with a set screw and a releasing lever.

On delivery, the set screw is inserted far enough to not fall out and to not affect the brake performance. The set screw is self-locking. This prevents it from unintended turning in or from falling out.

In case of BE03 brakes, the set screw is stored in the grommets between the stator fins.

#### *Activating the /HF manual brake release with BE03 brake*

Proceed as follows:

1. Screw in the set screw until there is no more clearance at the releasing lever.
2. To release the brake manually, screw in the set screw by 1/2 – 1 turn.

#### *Activating the /HF manual brake release with BE05 – BE122 brake*

Proceed as follows:

1. Screw in the set screw until there is no more clearance at the releasing lever.
2. To release the brake manually, screw in the set screw by 1/4 – 1/2 turn.

#### *Loosening the /HF manual brake release with BE03 brake*

Proceed as follows:

1. Remove the set screw completely from the thread.
2. Fasten the set screw between the stator fins with both grommets.

#### *Loosening the /HF manual brake release with BE05 – BE122 brake*

Proceed as follows:

1. Loosen the set screw at least until the floating clearance of the manual brake release has completely returned, see chapter "Retrofitting the /HR, /HF manual brake release".

**Activating and loosening the /HR manual brake release****▲ WARNING**

No brake function due to activated manual brake release.

Severe or fatal injuries.

- Before startup, make sure that the hand lever has been removed or secured against unintentional activation to prevent unintentional brake release during operation.

You can use the option /HF manual brake release to mechanically release the BE.. brake for a short time via a combination of releasing lever and hand lever. It is designed with a spring mechanism, so that it reengages automatically.

During assembly, the mechanics inside the fan guard is preset at the factory. A hand lever is included in the delivery that is attached to the stator housing.

**Activating the /HR manual brake release**

Proceed as follows:

1. Remove the hand lever from the stator housing.
2. Screw the thread of the hand lever completely into the thread of the releasing lever.
3. To release the brake, pull the hand lever in the direction away from the terminal box. The correct direction of use is indicated by an arrow symbol on the fan guard or on the closing part on the fan guard opening.

**Loosening the /HR manual brake release****INFORMATION**

The releasing procedure can be performed with usual force application, do not apply too much force to the lever to avoid damage to the drive.

Proceed as follows:

1. Let go of the lever in the actuated state. The lever automatically reengages to the initial position and the brake is applied.
2. Screw out the hand lever and keep it safe. With motors of sizes 63 – 280, you can attach the hand lever to the stator housing with the provided grommets or clamps.

**4.10.2 2nd shaft end with optional cover**

SEW-EURODRIVE delivers motors with the 2nd shaft end option /2W with the key inserted and secured by transport protection. This transport protection is not suitable for operation.

**▲ WARNING**

Rotating shaft end or attachments.

Severe or fatal injuries.

- Only start the motor with installed protective cover at the second shaft end.

### ⚠ WARNING

Unsecured key skidding out of the keyway.

Severe or fatal injuries due to flying parts.

- Only operate the motor with attached customer output element (e.g. gear unit), or with a suitably secured key.

### ⚠ WARNING

Generating of sparks due to unsecured key.

Severe or fatal injuries from explosion.

- Only operate the motor with attached customer output element (e.g. gear unit), or with a suitably secured key.

## INFORMATION

Observe the impact resistance requirements according to IEC 60079-0 for selection and mounting the customer-provided cover.

A cover for the second shaft end is not included in the delivery as standard. The cover can be ordered optionally for EDR..71 – 280, EDRN63 – 280 motors. If no optional cover is selected, the customer must provide a protection cover to ensure a suitable touch guard.

The following figure shows the dimensions of the optional cover. The optional cover is standard for EDR..71 – 132 and EDR..250 – 280, EDRN63 – 132S, EDRN250 – 280, and optional for EDR..160 – 225, EDRN132M – 225 motors.

| EDR..250 – 280     | EDRN250 to 280     | 55 | 110 | 3   | 243.5 |
| EDR..250 – 280 /BE | EDRN250 – 280 /BE  |    |     |     |       |

## 5 Electrical installation

### 5.1 General information

#### **⚠ WARNING**

Electric shock due to incorrect installation.

Severe or fatal injuries.

- Use switch contacts in utilization category AC-3 IEC 60947-4-1 for switching the motor.
- When motors are powered by inverters, you must adhere to the wiring instructions in the frequency inverter operating instructions.

### 5.2 Additional regulations

The generally applicable installation regulations for low-voltage electric equipment (such as DIN IEC 60364, DIN EN 50110) must be complied with when setting up electrical machinery.

### 5.3 Wiring diagrams and terminal assignment diagrams

Connect the motor as shown in the wiring connection diagrams provided with the motor. You can obtain the valid wiring diagrams free of charge from SEW-EURODRIVE.

#### **INFORMATION**

Do not connect or start up the motor if the wiring diagram is missing.

## 5.4 Cable entries

The terminal boxes have metric threaded holes according to EN 50262 or NPT threaded holes according to ANSI B1.20.1-1983. All bores are equipped with explosion-protected closing plugs upon delivery.

For a correct cable entry, replace the closing plugs by cable glands with strain relief that are certified for use in the respective hazardous location. Select the cable gland according to the outer diameter of the cable used. For the tightening torque of the cable entry, refer to the operating/installation instructions or the IECEx Certificate of Conformity of the cable glands. The IP degree of protection of the cable entry must be at least as high as the IP degree of protection of the motor.

Only use connection glands with screw heads that fit into the existing countersink.

The following table shows the sizes of the flat bottom counter sinking with the corresponding screw sizes:

| Counter sinking in mm | 19  | 24  | 30  | 35  | 45  | 56  | 64  | 75  |
|-----------------------|-----|-----|-----|-----|-----|-----|-----|-----|
| Screw fitting         | M12 | M16 | M20 | M25 | M32 | M40 | M50 | M63 |

All cable entries that are not required must be sealed off with a closing plug after completion of the installation in order to maintain the degree of protection. A closing plug may only be replaced with another explosion-protected closing plug.

## 5.5 Equipotential bonding

In accordance with IEC 60079-14, the unit must be connected to an equipotential bonding system. A second grounding screw is available for this connection on the outside of the terminal box. Observe chapter "Improving the grounding (EMC), HF grounding" (→ 66).

## 5.6 Wiring notes

During installation observe the safety notes in chapter 2 and 5.

### 5.6.1 Protecting the brake control system against interference

Brake cables must always be routed separately from other unshielded power cables with phased currents to prevent interference with brake control. In particular, power cables with phased currents include:

- Output cables from frequency inverters and servo inverters, soft start units and brake units
- Supply cables for braking resistors and similar options

For line-operated motors and when using AC and DC circuit cut-off, the connection between the brake rectifier and the external switch contact must be in a different power cable that is separate from the motor power supply.

### 5.6.2 Protecting the motor protection devices against interference

Adhere to the following points to protect motor protection devices by SEW-EURODRIVE against interference:

- You may route separately shielded supply cables together with power cables in one cable.
- Do not route unshielded supply cables together with power lines in one cable.

## 5.7 Special aspects for operation with a frequency inverter

When motors are powered from inverters, you must observe the wiring instructions issued by the inverter manufacturer. It is essential to observe chapter "Duty types and limit values" (→ 95) and the operating instructions of the frequency inverter.

If a drive has an earth leakage current higher than AC or DC 10 mA on a line connection, one or more of the following requirements must be met for the protective earth system:

- The PE must have a minimum cross section over its entire length of 10 mm<sup>2</sup> with copper or 16 mm<sup>2</sup> with aluminum.
- Where the PE has a cross section of less than 10 mm<sup>2</sup> with copper or 16 mm<sup>2</sup> with aluminum, a second PE with at least the same cross section is required to the point where the PE has a cross section of not less than 10 mm<sup>2</sup> with copper or 16 mm<sup>2</sup> with aluminum.

The drive might need to be equipped with a separate connection for a second PE.

### 5.8 Exterior grounding at the terminal box, LF grounding

In addition to the interior PE connection, an NF grounding can be installed on the outside of the terminal box for an improved, low-impedance grounding in case of low frequencies. Installed as standard.

The option can be combined with "Improving the grounding (EMC), HF grounding" (→ 66).

#### EDRN63 motor

32631576971

- [1] Use of the pre-cast bore at the stator housing
- [2] Serrated lock washer
- [3] Disk ISO 7093
- [4] Self-tapping screw DIN 7500 M × 16, tightening torque 5 Nm

[1] LF grounding at the terminal box

## 5.9 Improving the grounding (EMC), HF grounding

For improved, low-impedance grounding at high frequencies, we recommend using the following connections with corrosion protected connection elements:

HF grounding is not installed as standard.

The HF grounding option can be combined with LF grounding at the terminal box.

If you require LF grounding in addition to HF grounding, you can connect the conductor to the same point.

The HF grounding option can be ordered as follows:

- Completely pre-assembled at the factory
- As "grounding terminal" kit for customer installation; part numbers listed in the following table.

| Motors                                                      | Part number of "Grounding terminal" kit |
|-------------------------------------------------------------|-----------------------------------------|
| EDRN63                                                      | 21014817                                |

### INFORMATION

If 2 or more ground straps are used, you must attach them with a longer screw. The specified tightening torques refer to a strap thickness of  $t \leq 3$  mm.

#### 5.9.1 EDRN63 motors with HF (+NF) grounding

22297406859

- |                                                    |                                                                 |

- |                                                    |                                                                  |
|----------------------------------------------------|------------------------------------------------------------------|
| [1] Use of the pre-cast bore at the stator housing | [4] Ground strap (not included in the delivery)                  |
| [2] Serrated lock washer                           | [5] Self-tapping screw DIN 7500 M6 × 16, tightening torque 10 Nm |
| [3] Washer ISO 7093                                |                                                                  |

## 5.9.5 EDRE100L – 132, EDRN100L – 132S motors with HF (+LF) grounding

18014402064551947

- |                                         |                                                              |
|-----------------------------------------|--------------------------------------------------------------|
| [1] Use of tapped hole for lifting eyes | [4] Ground strap (not included in the delivery)              |
| [2] Serrated lock washer DIN 6798       | [5] Hex head screw ISO 4017 M8 × 18, tightening torque 10 Nm |
| [3] Washer ISO 7089/ISO 7090            |                                                              |

### 5.9.6 EDRE160 – 225, EDRN132M – 315 motors with HF (+LF) grounding

18014402076409099

- [1] Use of the tapped holes at the terminal box
- [2] Serrated lock washer DIN 6798
- [3] Washer ISO 7089/ISO 7090
- [4] Ground strap (not included in the delivery)
- [5]
  - Hex head screw ISO 4017 M8 × 18 (with aluminum terminal boxes of EDRE160 – 225, EDRN132M – 225 motors), tightening torque 10 Nm
  - Hex head screw ISO 4017 M10 × 25 (with gray cast iron terminal boxes of EDRE160 – 225, EDRN132M – 225 motors), tightening torque 10 Nm
  - Hex head screw ISO 4017 M12 × 30 (terminal boxes of EDRN250 – 315 motors), tightening torque 15.5 Nm

For EDRE160 – 225, EDRN132M – 225 motors with gray cast iron terminal boxes, the grounding is always pre-installed upon delivery.

### 5.10 Special aspects in switching operation

When the motors are used in switching operation, possible interference of the switchgear must be excluded by ensuring suitable wiring. According to IEC 60204 (electrical equipment of machines), motor windings must have interference suppression to protect the numerical or programmable logic controllers. As it is primarily switching operations that cause interference, SEW-EURODRIVE recommends installing protective circuitry in the switching devices.

## **5.11 Ambient conditions during operation**

### **5.11.1 Ambient temperature**

The temperature range of -20 °C to +40 °C must be ensured unless otherwise specified on the nameplate.

Motors intended for use in higher or lower ambient temperatures will have the respective designation on the nameplate.

If the motors are used at an ambient temperature above +40 °C (max. +60 °C), the cables and cable glands must be suitable for temperatures  $\geq 90$  °C.

Temperatures below -20 °C (max. -40 °C) require anti-condensation heating. In addition, the cables and screw fittings must be selected according to the relevant temperature.

### **5.11.2 Installation altitude**

The maximum installation altitude of the motors is 1000 m above sea level.

### **5.11.3 Hazardous radiation**

Motors must not be subjected to hazardous radiation (such as ionizing radiation). Consult SEW-EURODRIVE, if necessary.

### **5.11.4 Hazardous gases, vapors and dusts**

If used according to their designated use, explosion-protected motors are incapable of igniting explosive gases, vapors or dusts. However, explosion-protected motors may not be subjected to gases, vapors or dusts that endanger operational safety, for example through

- Corrosion
- Damage to the protective coating
- Damage to the sealing material, etc.

### **Gasket selection**

If the motor is operated in environments with high environmental impact, such as increased ozone values, the motors can be optionally equipped with gaskets of a higher quality. If you have doubts regarding the stability of the gaskets when subjected to the respective environmental impacts, contact SEW-EURODRIVE.

**5.12 Motors of design 2G-b, 2D-b, 2GD-b, 3G-c, 3D-c and 3GD-c**

The EDR../EDRN.. explosion-protected motors by SEW-EURODRIVE are designed for use in the following zones:

| Design | Protection type/<br>protection level | Usage                                                       |
|--------|--------------------------------------|-------------------------------------------------------------|
| /2G-b  | eb                                   | Can be used in zones 1 and 2                                |
| /2D-b  | tb                                   | Can be used in zones 21 and 22                              |
| /2GD-b | eb, tb                               | Can be used in zones 1 and 2, as well as in zones 21 and 22 |
| /3G-c  | ec                                   | Can be used in zone 2                                       |
| /3D-c  | tc                                   | Can be used in zone 22                                      |
| /3GD-c | ec, tc                               | Can be used in zones 2 and 22                               |

**5.12.1 Temperature classes**

|             |                                                                                                                                |
|-------------|--------------------------------------------------------------------------------------------------------------------------------|
| 3G-c, 3GD-c | For temperature classes of motor types 3G-c, 3GD-c, refer to the nameplate or the IECEx Certificate of Conformity (IECEx CoC). |
| 2G-b, 2GD-b | For temperature classes of motor types 2G-b, 2GD-b, refer to the nameplate or the IECEx Certificate of Conformity (IECEx CoC). |

**5.12.2 Surface temperatures**

|             |                                                                                                                                    |
|-------------|------------------------------------------------------------------------------------------------------------------------------------|
| 3D-c, 3GD-c | For surface temperatures of motor types 3D-c and 3GD-c, refer to the nameplate or the IECEx Certificate of Conformity (IECEx CoC). |
| 2D-b, 2GD-b | For surface temperatures of motors types 2D-b, 2GD-b, refer to the nameplate or the IECEx Certificate of Conformity (IECEx CoC).   |

### 5.12.3 Protection against excessively high surface temperatures

#### Protection exclusively with motor protection switch

Note the following when installing motors with S1 identification and motor circuit breaker according to IEC 60947:

- For types 2G-b and 2GD-b: With starting current ratio  $I_A/I_N$  listed on the nameplate, the response time of the motor circuit breaker must be less than the heating time  $t_E$  of the motor.
- The motor circuit breaker must disconnect all poles in the event of a phase failure.
- The motor circuit breaker must be approved by a notified body and provided with a corresponding marking of explosion protection..
- The motor circuit breaker must be adjusted to the rated motor current indicated on the nameplate. For types 2G-b, 2D-b, and 2GD-b, the permitted rated motor current is also specified in the IECEx Certificate of Conformity (IECEx CoC).

#### Protection exclusively with PTC thermistor (/TF)

Motors with S1, S4/50% identification that are equipped with a PTC thermistor: The PTC thermistor must be evaluated using a suitable device. Observe the applicable installation regulations.

#### **⚠ WARNING**

Destruction of the temperature sensor, resulting in risk of explosion due to impermissible heating of the motor.

Fatal or serious injuries caused by explosion.

- Do not connect a voltages > 30 V.

The PTC thermistors comply with DIN VDE V 0898-1-401.

Resistance measurement (measuring device with  $U \leq 2.5 \text{ V}$  or  $I < 1 \text{ mA}$ ):

- Standard measured values: 20 – 500  $\Omega$ , hot resistance > 4000  $\Omega$

The PTC thermistor (/TF) is required in order to maintain a safe isolation and for thermal monitoring.

The evaluation function of the temperature monitoring must be activated in connection with the temperature sensor measuring circuit and must become effective in the event of an overtemperature.

#### Protection with motor protection switch and additional PTC thermistor

The conditions stated for exclusive protection with motor circuit breaker also apply here. Protection with PTC thermistors (/TF) only represents a supplementary preventive measure which is irrelevant to certification for potentially explosive atmospheres.

### 5.13 Notes regarding the connection of the motor

#### ⚠ WARNING

Risk of explosion due to contaminated terminal box.

Severe or fatal injuries.

- Seal the terminal box and unused cable entries against dust and humidity.
- Remove foreign objects, dirt and humidity from the terminal box.

#### INFORMATION

It is essential to comply with the valid wiring diagram. Do not connect or start up the motor if this wiring diagram is missing. You can obtain the valid wiring diagrams free of charge from SEW-EURODRIVE.

Observe the following points when you connect the motor:

- Check the cable cross section.
- Arrange the terminal links correctly. see the chapters "Motor connection via terminal board" (→ 76) and "Connecting the motor via terminal strip" (→ 80).
- Tighten connections and protective earth securely.
- Make sure that the connection cables are not cramped to prevent the cable insulation from being damaged.
- Adhere to the air gaps, see chapter "Electrical installation".
- Check the winding connections in the terminal box and tighten them, if necessary.
- Connect the motors according to the enclosed wiring diagram.
- Avoid protruding wire ends.
- Connect the motor according to the specified direction of rotation.

#### 5.13.1 Wiring diagrams

The following wiring diagrams can be obtained from SEW-EURODRIVE by specifying the order number of the motor (see chapter "Nameplate" (→ 22)):

| Motors             | Number of poles | Connection | Corresponding wiring diagram (designation/number)<br>xx = placeholder for version |
|--------------------|-----------------|------------|-----------------------------------------------------------------------------------|
| EDR..71 – EDR..315 | 4               | △ / 人      | C13: 68184xx08                                                                    |
| EDRN71 – EDRN315   |                 |            | R13: 68001xx06                                                                    |
| EDRN63             |                 |            | A13: 68404xx17                                                                    |

### 5.13.2 Connection types

The motors are supplied and connected differently depending on the size and electrical design.

Comply with the connection type specified in the following table:

| Motors                                 | Connection                                                                                                                                                                                                                                                                          |
|----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EDRN63                                 | <ul style="list-style-type: none"> <li>Motor connection via cage clamp (terminal strip)</li> </ul>                                                                                                                                                                                  |
| EDR..71 – EDR..132,<br>EDRN71 – 132S   | <ul style="list-style-type: none"> <li>With <math>V &lt; 500\text{ V}</math> and <math>I &lt; 17\text{ A}</math>: Motor connection via cage clamp</li> <li>With <math>V &gt; 500\text{ V}</math> or <math>I &gt; 17\text{ A}</math>: Motor connection via terminal board</li> </ul> |
| EDR..160 – EDR..315,<br>EDRN132M – 315 | <ul style="list-style-type: none"> <li>Motor connection via terminal board</li> </ul>                                                                                                                                                                                               |

## 5.14 Motor connection via terminal board

### 5.14.1 Double-sided supply with high load currents

In case of high load currents, a double-sided supply must be realized for EDR../EDRN250 – 315 motors. This applies to load currents higher than the following values:

- M12: 213 A
- M16: 280 A

#### Arrangement of terminal links with $\Delta$ connection

EDR../EDRN250 – 315 motors  
(double-sided supply):

9007199734852747

- |                    |                                                       |
|--------------------|-------------------------------------------------------|
| [1] Terminal link  | [4] Terminal board                                    |
| [2] Terminal studs | [5] Customer connection with divided connection cable |
| [3] Flange nut     |                                                       |

### 5.14.2 Connection variants via terminal board

The motors are supplied and connected in different ways depending on the electrical design. Arrange the terminal links as shown in the wiring diagram and screw them on firmly. Observe the tightening torques specified in the following tables:

| EDR..71 – EDR..132, EDNR71 – 132S motors |                           |                        |        |                               |                                                  |                  |        |
|------------------------------------------|---------------------------|------------------------|--------|-------------------------------|--------------------------------------------------|------------------|--------|
| Terminal stud                            | Tightening torque hex nut | Connection by customer | Design | Connection type               | Scope of delivery (small connection accessories) | PE terminal stud | Design |
| Ø                                        |                           | Cross section          |        |                               |                                                  | Ø                |        |
| M6                                       | 3.0 Nm                    | ≤ 6 mm <sup>2</sup>    | 1      | Ring cable lug/<br>solid wire | Enclosed in bag                                  | M5               | 4      |

| M16                                       | 30 Nm                     | 35 mm <sup>2</sup>                      | 3      | Ring cable lug  | Enclosed in bag   | M12              | 2      |

The designs in bold print apply to S1 duty type for the standard voltages and standard frequencies according to the data in the catalog. Other designs may have different connections, for example, different terminal stud diameters and/or a different scope of delivery.

#### ⚠ WARNING

Risk of explosion due to incorrect tubular cable lugs.

Severe or fatal injuries.

- Do not use tubular cable lugs according to DIN 46235, as the air gaps may be less than the minimum permitted values.
- Use tubular cable lugs according to DIN 46234 and DIN 46237.

## Variant 1

The following figure shows the 2 possible customer connections:

Customer connection with ring cable lug:

9007203244266635

Customer connection with solid wire:

18014401143876491

- |                                                                                        |                                                                           |

| [1] | Hex nut                     | [4] | Serrated lock washer |
| [2] | Washer                      | [5] | Stud                 |
| [3] | PE conductor with cable lug | [6] | Terminal box         |

### Variant 3

9007199454382091

- |     |                                                                                           |     |                                        |
|-----|-------------------------------------------------------------------------------------------|-----|----------------------------------------|
| [1] | External connection with ring cable lug, according to DIN 46237 or DIN 46234, for example | [5] | Terminal link                          |
| [2] | Terminal stud                                                                             | [6] | Bottom nut                             |
| [3] | Upper nut                                                                                 | [7] | Winding connection with ring cable lug |
| [4] | Washer                                                                                    | [8] | Serrated lock washer                   |

## Variant 4

18014399649088651

- [1] Terminal box
- [2] Terminal clip
- [3] PE conductor

- [4] Lock washer
- [5] Hex head screw

## 5.15 Connecting the motor via terminal strip

### 5.15.1 According to wiring diagram A13 with terminal strip

1. Connect the motor according to the enclosed wiring diagram.
2. Check the maximum cable cross section.
  - ⇒ 2.5 mm<sup>2</sup> rigid
  - ⇒ 2.5 mm<sup>2</sup> flexible
  - ⇒ 1.5 mm<sup>2</sup> flexible with conductor end sleeve
3. The stripping length must be 8 – 9 mm.

### 5.15.2 According to wiring diagram C13 with terminal strip /KCC

1. Connect the motor according to the enclosed wiring diagram.
2. Check the maximum cable cross section.
  - ⇒ 4 mm<sup>2</sup> rigid
  - ⇒ 4 mm<sup>2</sup> flexible
  - ⇒ 2.5 mm<sup>2</sup> flexible with conductor end sleeve
3. Check the winding connections in the terminal box and tighten them, if necessary.
4. The stripping length must be 10 – 12 mm.

#### Arrangement of terminal links with $\perp$ connection

18014399506064139

#### Arrangement of terminal links with $\triangle$ connection

18014399506066059

## 5.16 Connecting the brake

BE.. brakes are powered by energized DC voltage and are released electrically. The brake is applied mechanically when the voltage supply is disconnected.

### ⚠ WARNING

Delayed brake application or unintentional brake release due to incorrect control or connection.

Severe or fatal injuries, e.g. due to falling hoist.

- Comply with the applicable regulations issued by the relevant employer's liability insurance association regarding phase failure protection and the associated circuit/circuit modification.
- Connect the brake according to the enclosed wiring diagram.
- In case of emergency off, always disconnect all poles of the brake control from the supply voltage.
- Only use suitable contactors with sufficient contact rating (utilization category according to IEC 60947-4-1/IEC 60947-5-1, see chapter "Brake voltage supply" (→ 84)).
- For contactor selection, observe the inductive load to switch, and the high current load while switching the brake.

### 5.16.1 Connecting the brake control

The brake is powered by a brake control system with protection circuit. For design 3D-c, the brake control can either be installed in the motor's terminal box or in the control cabinet. For designs 3G-c, 3GD-c, the control must be located in the control cabinet. If the motor is prepared for the brake control in the control cabinet, the brake supply cables are connected to a terminal strip in the motor terminal box.

Screw terminals are usually used as terminals on the brake control. The terminal strip is designed with cage clamps.

The connectable cable cross sections are restricted to 2.5 mm<sup>2</sup>. If you use larger cable cross sections due to application reasons, additional intermediate terminals must be used.

The brake is internally connected to the motor PE. An additional connection for the brake is not necessary.

### ⚠ WARNING

Delayed brake application or unintentional brake release due to incorrect control or connection.

Severe or fatal injuries, e.g. due to falling hoist.

- Observe the specifications of this documentation for connecting the brake.
- If you are uncertain about brake control, voltage supply type and design, or over-voltage and short circuit protection, contact the plant manufacturer or SEW-EURODRIVE.

## 5.16.2 Permitted brake controls

## INFORMATION

The following specifications refer to motors designed for operation at ambient temperatures of -20 °C to +40 °C, and with thermal class 130 (B) or 155 (F). Deviations may occur depending on the installed motor options.

In individual cases, always also observe the additional specifications in the order confirmation and on the motor nameplate.

The brake is designed for operation with AC voltage or DC voltage, depending on the design. A brake control by SEW-EURODRIVE is used that is either installed in the motor terminal box (design 3D-c) or in the control cabinet (design 3G-c, 3GD-c).

BE03 – 2 brakes can also be operated without brake control by SEW-EURODRIVE with DC voltage. Observe the information on the motor nameplate. In this case, a suitable overvoltage protection must be installed at the terminal strips in the terminal box using varistors. The varistors are not included in the delivery of the motor.

The following brake control types are not permitted:

- Operation with AC voltage without brake control by SEW-EURODRIVE with BE03 – BE122 brakes.
- Operation with DC voltage without brake control by SEW-EURODRIVE with BE5 – BE122 brakes.
- Operation with third-party brake control systems.

For an overview of available brake controls by SEW-EURODRIVE and of the technical data, refer to chapter "Brake control" (→ 228).

## ⚠ WARNING

Severe or fatal injuries

Great and unexpected elongation of the stopping distance.

- Operate each brake with a separate brake control.
- Observe the notes on dimensioning in the catalog, or contact SEW-EURODRIVE.

## 5.16.3 Optional separation of DC and AC circuits

In case of brakes operated with AC voltage, make sure the disconnection type designated by the manufacturer is applied correctly during the brake connection. The following types are distinguished:

- Cut-off in the AC circuit with normal application time
- Cut-off in AC circuit and DC circuit with shortened application time

The correct switch-off type must be ensured through appropriate wiring. Certain brake controls by SEW-EURODRIVE implement the same AC and DC cut-off via integrated switching relays (e.g. BMP1.5), or via mounted relays (e.g. BSR or BUR for design 3D-c).

The switch-off type is specified on the included wiring diagrams by a pictogram.

### ⚠ WARNING

Delayed brake application or unintentional ongoing brake release due to incorrect switch-off.

Severe or fatal injuries, e.g. due to falling hoist or extended coasting.

- During project planning, consider the required cut-off type and the effects on the expected stopping distance in particular.
- Only use the faster cut-off in the DC and AC circuit for hoists and hoist-like applications.
- If it is unclear whether the application is a hoist-like application, contact SEW-EURODRIVE.
- Make sure that the configured cut-off type (AC or AC-DC) is implemented correctly during startup, regardless of the type of application.

#### 5.16.4 Brake voltage supply

The brake voltage supply must match the values specified on the nameplate of the motor. The brake must be supplied via the designated brake control.

The specifications on the nameplate have a tolerance of  $\pm 5\%$  of the stated nominal value, or of the mean value of the stated connection range. Observe order-specific deviations.

Make sure the voltage supply is sufficiently stable by using cable cross sections and voltage sources that are dimensioned accordingly. Make sure the supply voltage does not drop below 90% of the nominal value during starting. This could be caused by an increased inrush current, see chapter "Operating currents" (→ 218).

In case of single-speed drives of design 3D-c with brake control in the terminal box that are operated directly at the supply system (meaning without frequency inverter or soft start devices), the brake supply voltage can also be picked off from the terminal board of the motor. Adhere to the following restrictions:

- The nominal brake voltage must either match the phase-to-neutral voltage, or the phase-to-phase voltage of the motor (observe nameplate and motor switching type).
- In case of hoists or hoist-like applications, the BSR.. brake control must be used for cut-off in the DC and AC circuits.
- For combinations with BMP3.1 brake control (BE60 – 122) a voltage supply via the terminal board is not permitted.

### INFORMATION

In variable-speed motors and motors operated with soft start devices, the brake voltage must not be picked up at the motor terminal board because the voltage there is not constant.

### 5.16.5 Switching equipment

The high current utilization during switching the brake (inductive load) requires suitable contactors/switch contacts, to obtain the correct function of the brake.

Depending on brake type and type design, the switch contacts must meet the specifications in the following utilization categories:

- Switch contacts for the supply voltage at AC voltage operation: AC-3 according to IEC 60947-4-1 or AC-15 according to IEC 60947-5-1.
- Switch contact for the supply voltage at DC voltage operation: Preferably AC-3 or DC-3 according to IEC 60947-4-1. As an alternative, contacts in utilization category DC-13 according to IEC 60947-5-1 are also permitted.
- Switch contacts for optional separation on DC side: AC-3 according to IEC 60947-4-1.

Observe the specifications on the provided wiring diagram.

Using a semi-conductor relay is not permitted.

### 5.16.6 Brake controls with functional control input

In addition to the voltage supply, the optional brake controls of the BMK., BMKB. and BMV. series offer a control input for a DC 24 V signal with which the brakes can be switched via a PLC.

It is a purely functional input that is not "functionally safe" with respect to safety technology.

Due to their operating principle, fault states can occur in these devices that lead to unintentional ongoing brake release, even if the control voltage has been switched off.

#### WARNING

Unintentional ongoing brake release due to unrecognized malfunction of the brake control.

Severe or fatal injuries, e.g. due to falling hoist or extended coasting.

- Always disconnect all poles of the supply and control voltage for hoists and hoist-like applications.
- Ensure that a malfunction of the control input can be detected through additional, suitable diagnostic measures e.g. by monitoring the braking current to meet increased safety and reliability requirements.
- For applications with functional safety, use a safety-related brake control e.g. the BST.. brake control.
- If you have any questions regarding the handling of the control input, contact SEW-EURODRIVE.

### 5.16.7 Damage protection against overvoltage and short circuit

To obtain protection against overvoltage damages (e.g. due to short circuit), a sufficiently dimensioned fusing must be used at the supply cables.

Observe the notes on dimensioning in the catalog, or contact SEW-EURODRIVE.

## 5.17 Connecting the encoder

### 5.17.1 Overview of add-on encoders

Refer to the wiring connection diagrams on information on how to connect incremental encoders:

| En-coders | Motors                         | Encoder type   | Mounting type   | Supply    | Signal                            | Wiring diagram |
|-----------|--------------------------------|----------------|-----------------|-----------|-----------------------------------|----------------|
|           |                                |                |                 | DC V      |                                   |                |

### 5.17.2 Installation notes

For cable routing, use only cables and cable glands that meet the following criteria:

- The clamping range is suitable for the cables used.
- The IP degree of protection and operating temperature range of the encoder connection corresponds to at least the IP degree of protection and operating temperature range of the encoder.

If you use cables with a different diameter, replace the supplied cable gland with a suitable cable gland.

Depending on the encoder design, observe the following requirements for the cable gland:

| Encoder                    | Clamping range in mm | Tightening torque in Nm |
|----------------------------|----------------------|-------------------------|
| .K8., .V8.                 | 5 – 9.5              | 2 <sup>1)</sup>         |
| .S7., .V7., .G7. with SW17 | 5 – 9                | 3                       |
| .S7., .V7., .G7. with SW20 | 5 – 10               | 3                       |

1) For cables from SEW-EURODRIVE with a diameter of 8.5 – 9 mm, 5 cable pairs, shielded, PU coated.  
For other cables or operation subject to strong vibration, use adapted tightening torques.

Encoders .K8./V8.

Specifications regarding the connection cover with prefabricated cable (provided by the customer):

- Connect the M23 connector only outside of the explosion-protected area, or connect it to a device that meets explosion-protection requirements.
- Connect the D-sub connector only outside of the explosion-protected area, or connect it to a device that meets explosion-protection requirements.
- If you use a cable carrier installation, adhere to the minimum ambient temperature of -20 °C.

### 5.17.3 Connecting .8K./.V8. encoders

1. Loosen the screws of the connection cover [619] and remove it.
2. Connect the encoder as shown in the wiring diagram. Observe the stripping length of 8 mm when connecting the encoder to the terminal block in the connection cover [1164].
3. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
4. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.
5. Tighten the cable gland. For tightening torques, refer to the preceding table.
6. Provide a strain relief in accordance with IEC 60079-14. Do not damage the signal cables.

### 5.17.4 Connecting .S7./.V7./.G7. encoders

1. Remove the safety cover [361], or the forced cooling fan if required.
2. Loosen the screws of the connection cover [619] and remove it.
3. Connect the encoder as shown in the wiring diagram.
4. Screw on the connection cover [619].
  - ⇒ Tightening torque 2.25 Nm
5. Tighten the cable gland. For tightening torques, refer to the preceding table.
6. Provide a strain relief in accordance with IEC 60079-14. Do not damage the signal cables.
7. Mount the safety cover [361] onto the forced cooling fan.

### 5.17.5 Connecting third-party encoders

When using third-party encoders, observe the installation requirements of the supplied manufacturer's operating instructions.

## 5.18 Options

Connect options as shown in the wiring diagram(s) provided with the motor. Do not connect any options if the wiring diagram is missing. You can obtain the valid wiring diagrams free of charge from SEW-EURODRIVE.

The following options are not available for every equipment protection level /EPL, see the following table:

| Option                    | EPL Gb, Db | EPL Gc, Dc |
|---------------------------|------------|------------|
| Temperature sensor /TF    | x          | x          |
| Temperature detection /KY | x          | x          |
| Temperature detection /PK | x          | x          |
| Temperature detection /PT | x          | x          |
| Forced cooling fan /VE    | –          | x          |
| Add-on encoder            | –          | x          |
| Anti-condensation heating | x          | x          |

## 5.18.1 Temperature sensor /TF

**▲ WARNING**

Explosion caused by impermissible heating of the motor due to defective temperature sensor /TF.

Severe or fatal injuries.

- Do not connect any voltages > 30 V to the temperature sensor /TF.
- Observe the provided wiring diagram for the connection of the temperature sensor /TF.

The PTC thermistors comply with DIN VDE V 0898-1-401.

Resistance measurement (measuring instrument with  $V \leq 2.5 \text{ V}$  or  $I < 1 \text{ mA}$ ):

- Standard measured values: 20 – 500  $\Omega$ , hot resistance > 4000  $\Omega$

When using the temperature sensor for thermal monitoring, the evaluation function must be activated to maintain reliable isolation of the temperature sensor circuit. The thermal protection function must become active in case of overtemperature.

If there is a second terminal box for the temperature sensor /TF, this is where you must connect the temperature sensor.

Observe the provided wiring diagram for connecting the temperature sensor /TF. If the wiring diagram is not enclosed, you can obtain it from SEW-EURODRIVE free of charge.

The below figure shows the characteristic curve of /TF with reference to the nominal response temperature (referred to as  $T_{NF}$ ).

9007204724894475

31555454/EN – 11/2023

5.18.2 Temperature detection /KY (KTY84 – 130)

NOTICE

- Excessive self-heating of the temperature sensor can damage the insulation of the temperature detection as well as the motor winding.
- The drive system might be damaged.
- Use currents > 3 mA in the KTY circuit.
  - Observe the correct connection of the KTY to ensure correct evaluation of the temperature detection.
  - Observe the polarity during connection.

The characteristic curve in the following figure shows the resistance curve subject to the motor temperature with a measuring current of 2 mA and correct pole connection:

1140975115

| Technical data                 | KTY84 – 130         |
|--------------------------------|---------------------|
| Connection                     | Red (+)<br>Blue (-) |
| Total resistance at 20 – 25 °C | 540 Ω < R < 640 Ω   |
| Test current                   | < 3 mA              |

5.18.3    Temperature detection /PK (PT1000)

NOTICE

Excessive self-heating of the temperature sensor can damage the insulation of the temperature detection as well as the motor winding.

The drive system might be damaged.

- Avoid currents > 3 mA in the circuit of the PT1000.
- Observe the correct connection of the PT1000 to ensure correct evaluation of the temperature detection.

The characteristic curve in the following figure shows the resistance curve subject to the motor temperature.

17535480203

| Technical data                      | PT1000              |
|-------------------------------------|---------------------|
| Connection                          | Black/red           |
| Resistance at 20 – 25 °C per PT1000 | 1077 Ω < R < 1098 Ω |
| Test current                        | < 3 mA              |

#### 5.18.4 Temperature sensor /PT (PT100)

##### NOTICE

Excessive self-heating of the temperature detection can damage the insulation of the temperature detection as well as the motor winding.

The drive system might be damaged.

- Avoid currents > 3 mA in the circuit of the PT100.
- Observe the correct connection of the PT100 to ensure correct evaluation of the temperature detection.

The characteristic curve in the following figure shows the resistance curve subject to the motor temperature.

1145838347

| Technical data                     | PT100                 |
|------------------------------------|-----------------------|
| Connection                         | Red/white             |
| Resistance at 20 – 25 °C per PT100 | 107.8 Ω < R < 109.7 Ω |
| Test current                       | < 3 mA                |

#### 5.18.5 Forced cooling fan /VE

Motors can be equipped with a forced cooling fan as an option. For information on connection and safe operation, refer to chapter "Operation and maintenance instructions for forced cooling fan /VE".

#### 5.18.6 Anti-condensation heating

If explosion-protected motors are operated at ambient temperatures below -20 °C, the use of an anti-condensation heating is required.

Anti-condensation heating can optionally be used for applications operated at ambient temperatures above -20 °C where moisture condensation is expected.

The strip heaters are controlled according to the following principle:

- Motor switched off → anti-condensation heating activated
- Motor switched on → anti-condensation heating deactivated

Observe the permitted voltage according to the nameplate and the enclosed terminal assignment diagram.

## 6 Duty types and limit values

### 6.1 Permitted duty types

#### 6.1.1 Permitted operating modes and protection concept for motors with EPL "Gb" and "Db"

1) Monitoring device for protecting explosion-protected drives (e.g. Directive 2014/34/EU).

2) The catalog designation for PTC thermistors is "/TF". Monitoring of the PTC thermistor by a thermistor "monitoring device for protecting explosion-protected drives" (e.g. Directive 2014/34/EU)

## INFORMATION

All motors must be protected from impermissible heating according to IEC 60079-14. Safety equipment required for safe operation is affected by these standards and must be certified for this reason.

## 6.2 Line operation

### 6.2.1 Motors with EPL "Gb" and "Db"

#### Continuous duty

The motors are designed for continuous duty at a constant power rating (S1) and are marked accordingly. This includes low load startup at a small number of starts per hour that cause hardly any additional heating.

Overload protection must be ensured using a time delayed, current-controlled overload protection device.

The protective device not only monitors the motor current, but also the stopped motor during the  $t_E$  time.

#### Switching operation

Operate motors marked with S1, S4/50% only in the duty types S1 and S4/50%.

S4 duty type takes account of start-up and load changes. S4 duty type is extended by the relative cyclic duration factor (cdf), the mass moment of inertia of the motor ( $J_M$ ) and mass moment of inertia of the load ( $J_{ext}$ ). Both mass moments of inertia refer to the motor shaft. The mass moments of inertia are indicated on the nameplate.

To calculate the permitted cycles per hour, use the formula for calculating the switching frequency.

The permitted no-load starting frequency ( $Z_0$ ) required for the calculation and referring to 50%, is specified in the IECEx Certificate of Conformity (IECEx CoC).

The evaluation of PTC thermistors (/TF) is the only measure to prevent overheating.

### 6.2.2 Motors with EPL "Gc" and "Dc"

#### Continuous duty

The motors are designed for continuous duty at a constant power rating (S1) and are marked accordingly. This includes low load startup at a small number of starts per hour that cause hardly any additional heating.

Overload protection must be ensured using a time delayed, current-controlled overload protection device.

#### Switching operation

In case of switching frequencies that are assigned to duty types S3, S4, and S6, the load changes must be considered in addition to start-up. This is ensured by calculating the permitted switching frequency.

To calculate the permitted cycles per hour, use the formula for calculating the switching frequency.

The evaluation of PTC thermistors (/TF) is the only measure to prevent overheating.

#### Important notes on the brake

In line operation, the brake is applied at rated speed of the motor when the drive is switched off or in case of an emergency stop. The braking work may not exceed the permitted maximum braking work per braking operation. Observe the information in the manual "Project Planning for BE.. Brakes – DR.., DRN.., DR2.., EDR.., EDRN.. AC Motors – Standard Brake/Safety Brake".

The evaluation of a PTC thermistor (/TF) is the only measure to prevent overheating. The brakemotors from SEW-EURODRIVE are equipped with PTC thermistors (/TF).

### 6.2.3 Calculating the starting frequency

You can determine the permitted switching frequency  $Z$  of the motor in cycles/hour using the following formula:

$$Z = Z_0 \times K_J \times K_M \times K_P$$

You can determine the factors  $K_J$ ,  $K_M$ , and  $K_P$  using the following diagrams:

Depending on the additional moment of inertia

19214810891

Depending on the counter-torque at startup

19214806027

Depending on the static power and the relative cyclic duration factor cdf

19214808459

|       |                                                                             |            |                                          |
|-------|-----------------------------------------------------------------------------|------------|------------------------------------------|
| $J_X$ | Total of all external mass moments of inertia in relation to the motor axis | $M_H$      | Acceleration torque of the motor         |
| $J_Z$ | Mass moment of inertia flywheel fan                                         | $P_{Stat}$ | Power demand after run-up (static power) |
| $J_M$ | Motor's mass moment of inertia                                              | $P_N$      | Rated motor power                        |
| $M_L$ | Counter-torque during startup                                               | $\% cdf$   | Relative cyclic duration factor          |

$Z_0$  is the no-load starting frequency defined by the manufacturer.

The permitted starting frequency  $Z$  of a motor is calculated using the formula for calculating the starting frequency.  $Z_0$  indicates the number of times per hour that the motor can accelerate the mass moment of inertia of its rotor up to nominal speed without counter-torque.

### 6.2.4 Soft starter/soft start units

Soft start devices are permitted for motors with EPL "Gc" and "Dc" when the motors are equipped with a /TF temperature sensor and meet the requirements of IEC 60079-14.

During startup, you must detect and document whether temperature monitoring is effective and whether the motor starts up correctly. When the protection device trips, disconnect the motor from the supply system.

6.3 Inverter operation

6.3.1 Permitted voltage stress in inverter operation

Operating motors from SEW-EURODRIVE on inverters is permitted if the pulse voltages at the motor terminals indicated in the following figure are not exceeded:

- [A] Permitted pulse  $U_{LL}$  in V
- [B] Rise time in  $\mu s$
- [1] Permitted pulse voltage for EDR../EDRN.. motors

INFORMATION

The permitted maximum PE voltage of 1200 V must not be exceeded in IT system operation even in the event of an error.

INFORMATION

If the permitted pulse voltage is exceeded, you have to provide for according measures to limit it. Consult the manufacturer of the inverter.

INFORMATION

The maximum permitted nominal motor voltage for inverter operation is 500 V.

**SEW-EURODRIVE frequency inverters**

When using frequency inverters from SEW-EURODRIVE at line voltages of up to 500 V and in non-regenerative operation, the maximally permitted limit values of the motors are met.

The pulse voltage at the motor terminals (caused by reflections) depends among others on the level of the DC link voltage and the cable length between frequency inverter and motor.

If regenerative operation cannot be ruled out, a braking resistor must be configured and connected to the frequency inverter to avoid an increased DC link voltage.

*Regenerative power supply*

The regenerative power supply module of MOVIDRIVE® or MOVIAXIS® with the necessary options can be used without restrictions. Regenerative power supply prevents high DC link voltages and ensures that the limit values are not exceeded.

**Frequency inverters from third-party manufacturers**

If the maximum permitted limit values cannot be met with frequency inverters from other manufacturers, you must take limiting measures. Contact the manufacturer of the frequency inverter for more information.

**IT system**

In an IT system, an insulation fault between a phase and ground is tolerated. The ground fault on the motor could mean that the maximum permitted limit value for phase/ground of 1200 V is exceeded in regenerative operation. To prevent this effectively, you have to install suitable protection elements between the frequency inverter and the motor. Usually, sine filters are installed between the frequency inverter and motor in this case. For detailed information about component selection and wiring, please contact the manufacturer of the frequency inverter.

## 6.4 Safe operation of motors with EPL "Gb" and "Db" on inverters

Project planning is the basic requirement for safe operation of explosion-protected motors. The following points have to be considered:

- Checking the conditions of the typical application.
- With deviations from the typical application: Calculate the motor terminal voltage.
- Adhere to the thermal torque limit characteristic curve.
- Adhere to the dynamic limit torque.
- Adhere to the motor limit frequency.
- Select a suitable frequency inverter, see chapter "Motor/inverter assignment for motors of type 2G-b, 2D-b and 2GD-b" (→ 102).
- Use a braking resistor if regenerative operation cannot be ruled out.
- Check the overhung and axial loads on the motor shaft of stand-alone motors.
- Observe the maximum gear unit input speed, see  $n_{\text{emax}}$  on the nameplate.
- Observe the maximum gear unit output torque, see  $M_{\text{amax}}$  on the nameplate.

### 6.4.1 Motor terminal voltage

The calculation of the motor terminal voltage is an important component of project planning.

If the conditions differ from the typical application, you have to calculate the start of field weakening  $f_{\text{D}}$  and the torque  $M_{\text{E}}$ , see chapter "Special application" (→ 125).

### 6.4.2 Maximum permitted torques

The thermal torque limit characteristic curve shows the permitted maximum torque for continuous operation of the motor.

If the effective operating point is below the thermal limit characteristic curve, the values may be exceeded briefly, see chapter "Typical application" (→ 121).

The permitted maximum dynamic limit torque is determined by the short-term current limitation (150%  $I_{\text{N motor}}$ ).

### 6.4.3 Maximum and minimum permitted frequencies

The maximum and minimum frequencies are indicated on the nameplate. The actual values may not exceed or fall below these specifications.

#### 6.4.4 Motor/inverter assignment for motors of type 2G-b, 2D-b and 2GD-b

MOVITRAC® B can be used for the basic control range and for the field weakening range.

MOVIDRIVE® B is only suitable for the basic setting range. This means the *maximum speed* parameter must be limited to the beginning of the field weakening range.

Only use frequency inverters which meet the requirements listed in the IECEx Certificate of Conformity (IECEx CoC).

Combinations for motor voltages other than 230/400 V can be requested from SEW-EURODRIVE.

### INFORMATION

The maximum speed values may be lower due to options and connection of a gear unit. Refer to the nameplate for the permitted values.

1) Only for design 2D-b.

2) Only for designs 2G-b, 2GD-b.

x = recommended      o = permitted      – = not permitted

For power ratings > 90 kW, contact SEW-EURODRIVE.

### 6.4.5 Notes for safe operation

#### General

Install the frequency inverter outside the potentially explosive atmosphere.

#### Thermal motor protection

Thermal motor protection is ensured by the following measures:

- Winding temperature monitoring through PTC thermistors (/TF) built into the winding. The /TF is monitored via an evaluation unit that complies with Directive 2014/34/EU and is labeled with the explosion protection identification II(2)GD/II(2)G.
- Monitoring of the motor current must comply with the IECEx Certificate of Conformity (IECEx CoC).
- Limitation of the motor torque must comply with the IECEx Certificate of Conformity (IECEx CoC).

#### Overvoltage at the motor terminals

When operating the motors on frequency inverters, observe chapter "Permitted voltage stress in inverter operation" (→ 99).

#### EMC measures

The following components are permitted for the MOVIDRIVE® and MOVITRAC® inverter series:

- Line filters of the NF... series
- Output chokes of the HD.. series
- Output filter (sine filter) HF..

When using an output filter, take account of the voltage drop via the filter. Observe chapter "Special application" (→ 125).

#### Gear unit according to Directive 2014/34/EU

When parameterizing frequency inverter controlled gearmotors, observe the  $n_{\text{emax}}$  and  $M_{\text{amax}}$  values of the gear unit.

In the following illustration, the values are inserted in the nameplate as an example:

20303627147

## 6.5 Safe operation of motors with EPL "Gc" and "Dc" on inverters

Project planning is the basic requirement for safe operation of explosion-protected motors. The following points have to be considered:

- Checking the conditions of the typical application.
- With deviations from the typical application: Calculate the motor terminal voltage.
- Adhere to the thermal torque limit characteristic curve.
- Adhere to the dynamic limit torque.
- Adhere to the motor limit frequency.
- Select a suitable frequency inverter, see chapter "Motor/inverter assignment for motors of design 3G-c, 3D-c and 3GD-c" (→ 112).
- Use a braking resistor if regenerative operation cannot be ruled out.
- Check the overhung and axial loads on the motor shaft of stand-alone motors.
- Observe the maximum gear unit input speed, see  $n_{\text{emax}}$  on the nameplate.
- Observe the maximum gear unit output torque, see  $M_{\text{amax}}$  on the nameplate.
- The maximum permitted braking work per emergency stop must be observed.

### 6.5.1 Motor terminal voltage

The calculation of the motor terminal voltage is an important component of project planning.

If the conditions differ from the typical application, you have to calculate the start of field weakening  $f_{\text{D}}$  and the torque  $M_{\text{E}}$ , see chapter "Special application" (→ 125).

### 6.5.2 Maximum permitted torques

The thermal torque limit characteristic curve shows the permitted maximum torque for continuous operation of the motor.

If the effective operating point is below the thermal limit characteristic curve, the values may be exceeded briefly, see chapter "Typical application" (→ 121).

The maximum dynamic limit torque of motors of equipment protection level c must not exceed 150% of  $M_{\text{N}}$ .

### 6.5.3 Maximum and minimum permitted frequencies

The maximum and minimum frequencies are indicated on the nameplate. The actual values may not exceed or fall below these specifications.

#### 6.5.4 Motor/inverter assignment for motors of design 3G-c, 3D-c and 3GD-c

Frequency inverters that have similar values with respect to output current and output voltage can also be used. For more information, refer to the standard IEC 60079-15 for EDR.. and IEC 60079-7 for EDRN.. motors.

Combinations for motor voltages other than 230/400 V can be requested from SEW-EURODRIVE.

### INFORMATION

The maximum speed values may be lower due to options and connection of a gear unit. Refer to the nameplate for the permitted values.

#### EDR.. motors in $\Delta$ connection at a motor voltage of 230/400 V, 50 Hz, 3D-c, 3GD-c

For power ratings > 90 kW, contact SEW-EURODRIVE.

## 6.5.5 Notes for safe operation

## General

Install the frequency inverter outside the potentially explosive atmosphere.

## Thermal motor protection

Only motors that are equipped with a PTC thermistor /TF are permitted for operation on an inverter to ensure that the permitted limit temperature is not exceeded. This must be evaluated using an appropriate device.

## Overvoltage at the motor terminals

When operating the motors on frequency inverters, observe chapter "Permitted voltage stress in inverter operation" (→ 99).

## EMC measures

The following components are permitted for the MOVIDRIVE® and MOVITRAC® inverter series:

- Line filters of the NF... series
- Output chokes of the HD.. series
- Output filter (sine filter) HF..

When using an output filter, take account of the voltage drop via the filter. Observe chapter "Special application" (→ 125).

## Gear unit to Directive 2014/34/EU

When parameterizing frequency inverter controlled gearmotors, observe the  $n_{\text{emax}}$  and  $M_{\text{amax}}$  values of the gear unit.

In the following illustration, the values are inserted in the nameplate as an example:

19547295243

## 6.6 Typical application

The following conditions must be met:

9007204712625163

- Supply system tolerance:  $\pm 5\%$
- Installation with and without external NF line filter
- Frequency inverter:
  - MOVITRAC® B
  - MOVIDRIVE® B
- Installation without line choke and without sine filter
- Installation of HD output choke
- Max. motor cable length 100 m  
Maximum permitted voltage drop: 10 V
- Rated motor voltage<sup>1)</sup>: 219 – 241 V /  
380 – 420 V or 230 / 400 V (here for  $V_{\text{line}} = 400 \text{ V}$ )

1) Choose the rated motor voltage depending on the line voltage.

### 6.6.1 Motor terminal voltage

The thermal torque limit curves are based on the assumption that all conditions of a typical application are fulfilled.

The motor terminal voltage must only be dimensioned if the conditions of a typical application are not met. For further information, refer to chapter "Calculating the motor terminal voltage" (→ 126).

### 6.6.2 Limit characteristic curves of EDR.., EDRN.. motors in inverter operation

The thermal torque limit curves show the permitted maximum torque ratings for continuous operation.

The maximum permitted dynamic limit torque is 150% of the rated motor torque.

If the effective operating point is below the thermal limit curve, the values may be exceeded briefly.

#### EPL "Gc" and "Dc"

The following diagram shows the typical limit characteristic curve for EDR..71 – 225, EDRN63 – 225 motors. Refer to the nameplate for the exact values.

36028800670915979

## Points A, B and C

These 3 points limit the torque in the lower speed range in order to protect the motor from overheating due to the reduced cooling. They do not have to be projected. The variables are included in the startup software and are automatically assigned the permitted values during startup.

## Points D, E

The two points illustrate the progress of the torque characteristic in the field weakening if the motor terminal voltage corresponds to the rated motor voltage (ideal case). Field weakening begins at point D. Point E is the permitted torque at limit speed.

Points D\*, E\*  
(typical application)

The typical application is characterized by the fact that due to the voltage drop the motor terminal board is not provided with the entire supply voltage. This causes a shift of the field weakening progress. The field weakening starts in point D\*.

For the limit speed, the shift of the characteristic results in a reduced torque E\*.

The startup software calculates both points D\* and E\* for the typical application and sets the respective parameters.

## 6.7 Special application

If the conditions of the typical application are not met, the motor terminal voltage can deviate and, as a result, the motor can heat up excessively.

The deviating motor terminal voltage changes the shape of the thermal characteristic curve. The calculation and observation of points D (field weakening  $f_{D^*}$ ) and E (current limit  $I_{E^*}$  and torque  $M_{E^*}$ ) during startup prevents the motor from overheating.

You have to calculate the current limit  $I_{E^*}$  only for drives with EPL "Gb" and "Db".

The project planning procedure is as follows:

- Calculate the motor terminal voltage
- Calculating the field weakening  $f_{D^*}$
- Calculate the torque characteristics  $M_{E^*}$
- Calculate the current limit  $I_{E^*}$  for motors of EPL b

### 6.7.1 Calculating the motor terminal voltage

The calculation of the motor terminal voltage is an important component of project planning. The results must be considered during startup and corrected, if necessary, to prevent excessive heating of the motor.

18014427511920779

|                    |                                        |
|--------------------|----------------------------------------|
| $U_{line}$         | Line voltage                           |
| $\Delta U_{ND}$    | Voltage drop at the line choke in V    |
| $\Delta U_{NF}$    | Voltage drop at the line filter in V   |
| $U_{I\_FI}$        | Inverter input voltage in V            |
| $U_{O\_FI}$        | Inverter output voltage in V           |
| $\Delta U_{HF}$    | Voltage drop at the output filter in V |
| $\Delta U_{cable}$ | Voltage drop at the motor cable in V   |

#### Line voltage $V_{line}$

The line voltage is determined via direct measurement with multimeter or by reading off the DC link voltage ( $V_{DC\ link}$ ) in the inverter ( $V_{line} = V_{DC\ link} / \sqrt{2}$ ).

**Voltage drop at the line choke  $\Delta U_{\text{line choke}}$** 

The voltage drop can be calculated in 2 ways:

- Calculation based on an equation
- Calculation based on table values

Both ways are illustrated below.

**Calculation based on an equation**

The extent of the voltage drop is determined by the main inductance and the ohmic share of the inductance.

**Typical connection pattern****Equation for calculating the voltage drop**

$$\Delta U_{ND} = I_{L\_FI} \times \sqrt{3} \times \sqrt{(2 \times \pi \times f \times L_{ND})^2 + R_{ND}^2}$$

$L_{ND}$  Inductance of the line choke in H  
 $R_{ND}$  Ohmic resistance of the line choke in  $\Omega$   
 $\Delta U_{ND}$  Voltage drop across line choke in V  
 $I_{L\_FI}$  Nominal input current of the inverter

For the inductance L and the ohmic resistance R of the inductance, refer to the documents for the line choke.

**Calculation based on table values**

The following table shows the voltage drop of the line voltage when using a line choke.

| Inverter power | Nominal supply system current inverter | Line choke | Voltage drop |
|----------------|----------------------------------------|------------|--------------|
| kW             | A                                      |            | % $U_N$      |
| 0.25           | 0.9                                    | ND020-013  | 0            |

### Voltage drop at the line filter $\Delta U_{NF}$

The line filter consists of current-compensated radio interference suppression chokes. The current flows through the winding of the chokes and the resulting magnetic fields compensate each other.

This is why the inverter current that flows through the line filter is only dampened by the ohmic share of the inductance and by the leakage inductance. The leakage inductance is very low compared to the main inductance. The voltage drop across the line filter can therefore be neglected.

#### Typical connection pattern

#### Equation for calculating the voltage drop

$$\Delta U_{NF} = I_{I\_FI} \times \sqrt{3} \times \sqrt{(2 \times \pi \times f \times L_{Leak})^2 + R_{NF}^2}$$

|                 |                                            |
|-----------------|--------------------------------------------|
| $\Delta U_{NF}$ | Voltage drop across line filter, in V      |
| $I_{I\_FI}$     | Nominal input current of the inverter in A |
| $L_{leak}$      | Leakage inductance in H                    |
| $R_{NF}$        | Ohmic resistance in $\Omega$               |

### Determining the inverter input voltage $\Delta U_{I\_FI}$

The inverter input voltage is determined by doing the following:

- Measuring the line voltage
- Calculating the voltage according to the formula

$$U_{I\_FI} = V_{Line} - \Delta U_{ND} - \Delta U_{NF}$$

- Reading-off the DC link voltage in the inverter

### Determining the inverter output voltage $\Delta U_{O\_FI}$

The voltage drop at the inverter is determined by the following:

- Voltages across the rectifier path
- Voltages at the output stage transistors
- The principle of converting supply voltage into DC link voltage and into the rotating field voltage
- Anti-overlap times resulting from the clocking of the output stage and the missing voltage-time areas
- Modulation process
- Load state and energy dissipation of the DC link capacitors

## INFORMATION

To simplify the calculation, use the value of 7.5% of the nominal input voltage. This value is to be taken as the maximum possible voltage drop at the inverter. This allows for a reliable project planning.  $U_{O\_FI} = 0.925 \times U_{I\_FI}$ .

If you use an inverter of another manufacturer, ask the manufacturer for the voltage drop.

### Voltage drop at the output filter $\Delta U_{HF}$

The voltage drop at the output filter is proportional to the modulated fundamental output frequency and the motor current. It must be requested from the manufacturer of the output filter in individual cases. The voltage drop of SEW output filters can be read from the table.

$$\Delta V_{Outp.Filter} = I \times \sqrt{3} \times \sqrt{(2 \times \pi \times f \times L)^2 + R^2}$$

9007199524175499

Since the resistance R is small enough to be neglected compared to the inductance L, the equation can be simplified to:

$$\Delta V_{Outp.Filter} = I \times \sqrt{3} \times 2 \times \pi \times f \times L$$

### HD.. output chokes

The voltage drop is negligible (current-compensated) for SEW-EURODRIVE output chokes (HD..).

**Voltage drop at the motor cable  $\Delta U_{\text{cable}}$** 

The voltage drop of the motor cable depends on the motor current and the cross section, length and material of the cable. The voltage drop can be read from the following table.

| Cable cross section<br>mm <sup>2</sup> | Load with I<br>A                                                                    |     |                    |                    |                    |                    |                  |                    |                  |                  |

1) Load not permitted according to IEC 60364-5-52.

**INFORMATION**

The voltage drop at the cable is compensated by the IxR compensation. SEW-EURODRIVE frequency inverters adjust this value in the "Automatic calibration ON" mode every time the frequency inverter is started. In order to provide for a voltage reserve in the frequency inverter for this compensation, you have to take into account the voltage loss via the motor cable.

### 6.7.2 Calculating the field weakening $f_{D^*}$

The following diagram illustrates the S1 limit curve of the EDRE90L4 of equipment protection level b.

### Field weakening

The field weakening is calculated using the following formula:

$$f_{D^*} = \frac{U_{\text{Motor terminal voltage}}}{U_{\text{Nominal motor voltage}}} \times f_D$$

$f_D$  Beginning of field weakening (ideal case, motor terminal voltage = nominal motor voltage)

$f_{D^*}$  Beginning of field weakening (depending on the actual motor terminal voltage)

### 6.7.3 Calculating the torque curve $M_{E^*}$

The torque curve is calculated using the following formula:

$$M_{E^*} = M_{Nom} \times \frac{\left( \frac{f_{D^*}}{f_l} + \left( \frac{f_{D^*}}{f_l} \right)^2 \right)}{2}$$

9007204283228683

$f_{IN}$  Maximum frequency

$M_{E^*}$  Reduced torque at maximum speed (depending on the actual motor terminal voltage)

## INFORMATION

You have to calculate several auxiliary points to determine an exact curve progression.

### Maximum frequencies

1) Only available as motors with 60 Hz.

2) Values only available for delta connection

#### 6.7.4 Calculating the current limit $I_{E^*}$ for motors of category 2/EPL .b

The current limit  $I_{E^*}$  is calculated using the following formula:

$$I_{E^*} = I_E \times \frac{M_{E^*}}{M_E}$$

26589305867

$I_E$  Current (ideal case, motor terminal voltage = rated motor voltage)

$I_{E^*}$  Current (depending on the actual motor terminal voltage)

$M_E$  Torque at maximum frequency (ideal case, motor terminal voltage = rated motor voltage)

Torque  $M_E$  and current  $I_E$

## 6.8 Group drive

Group drive means that several motors are operated simultaneously on one inverter.

### INFORMATION

Only EDR../EDRN.. motors with EPL "Dc" may be operated as group drive.

Motors in 3D-c design may be used as group drives in zone 22 if each individual motor of the group has been configured, designed, and identified for inverter operation.

The following restrictions apply:

- For applications, the individual motors must be connected slip-free, non-positive, or positive.
- Only identical motors may be used, which means motors with the same rated data (power, speed, voltage, and frequency).
- The following condition must be met:  
Nominal output current of inverter  $\leq 1.5 \times$  sum of nominal motor currents.
- Each motor must be designed with a thermal motor protection (PTC thermistor).
- Each individual temperature sensor must be externally monitored by a separate evaluation unit.
- If one evaluation unit trips, all motors of the group must be stopped.

## 7 Startup

### 7.1 General information

#### ⚠ WARNING

Electric shock due to incorrect installation.

Severe or fatal injuries.

- Use switch contacts in utilization category AC-3 according to EN 60947-4-1 for switching the motor.
- When motors are powered by inverters, you must adhere to the wiring instructions in the frequency inverter operating instructions.

#### INFORMATION

Limit the maximum speed at the inverter. For information on the procedure, refer to the documentation of the inverter.

#### ⚠ CAUTION

The surfaces on the drive can be very hot during operation.

Risk of burns.

- Let the motor cool down sufficiently before you start working on it.

### 7.2 Before startup

Prior to startup make sure that:

- The drive is undamaged and not blocked.
- Any transport locks have been removed.
- The measures stipulated in chapter "Preliminary work after longer periods of storage" (→ 35) are performed after storage periods longer than 9 months.
- All connections have been made correctly.
- The direction of rotation of the motor/gearmotor is correct.
  - Motor rotating clockwise: U, V, W (T1, T2, T3) to L1, L2, L3
- All protective covers are installed correctly.
- All motor protection equipment is active and set for the rated motor current.
- There are no other sources of danger.
- Loose elements like keys are appropriately secured.
- The brake is not manually released.
  - The set screw of /HF option is loosened correctly.
  - The hand lever of the /HR option has been removed and correctly attached to the stator using the designated clamps.

## 7.3 Parameter setting: Frequency inverters for motors with EPL "Gb" and "Db"

### INFORMATION

When you start up the frequency inverter, observe the operating instructions of the respective frequency inverter as well as the operating instructions of the gear unit if you use a gearmotor.

#### 7.3.1 Before startup

Prior to startup, check that all the conditions for the typical application are met, see chapter "Typical application" (→ 121). In the event of deviations from these conditions, you have to calculate the maximum terminal voltage, the field weakening range, and the torque characteristics prior to startup. The effective operating point must be below the new thermal characteristic curve.

#### 7.3.2 Startup procedure for MOVITRAC® 07B

Observe the following points during startup:

- Use the latest MOVITOOLS® MotionStudio software version for guided startup.
- Startup can only be activated in parameter set 1 due to the current limiting function for motors with EPL "Gb" and "Db".
- The system configuration allows only single drives.
- As the control mode, you can set both "V/f" and "vector controlled" (VFC).
- Only speed control can be selected for the application. The options "Hoist", "DC braking" or "Flying start function" must not be used.
- The operating mode must always be set to "4-quadrant operation".
- Select the matching motor series in the "Motor type" window.
- In the "Motor selection" window, choose the equipment category, the line voltage, the motor voltage, the connection type, and the type of plant configuration in addition to the motor.

#### Current limit

In guided startup, the *current limit* parameter is set to 150%  $I_{N\text{ Mot}}$  in the application window. This value must be reduced according to the permitted maximum output torque at the gear unit  $M_{\text{amax}}$ .

### Current monitoring

The parameters that need to be set for monitoring the current depend on the motor.

18014401599876235

|       |                                         |               |                  |
|-------|-----------------------------------------|---------------|------------------|
| $I_n$ | Nominal current in A                    | X             | Current limiting |
| $I_1$ | Permitted max. current in A             | f             | Frequency in Hz  |
| $I_2$ | Permitted continuous current range in A | A, B, C, D, E | Limiting points  |
| $I_0$ | Overload current in A                   |               |                  |

After motor startup, current limitation  $I_1$  is active. Current limitation  $I_2$  determines the current that is permanently permitted. The Ex-e motor current limiting function is activated automatically during startup for SEW-EURODRIVE motors with EPL "Gb" and "Db".

The speed-dependent current limit is activated by the according motor selection and all the parameters of group P560 are set for points A to E, see the following parameter table.

Additionally, the values are listed in the IECEx Certificate of Conformity (CoC).

| Parameter                       | Point A              | Point B | Point C | Point D | Point E |
|---------------------------------|----------------------|---------|---------|---------|---------|
| Frequency in Hz                 | P561                 | P563    | P565    | P567    | P570    |
| Calculation                     | Via startup software |         |         |         |         |
| Current limit in % of $I_{NFI}$ | P562                 | P564    | P566    | P568    | P571    |
| Calculation                     | Via startup software |         |         |         |         |

In the event of deviations from the typical application, you have to recalculate and manually adapt the parameters for points D (field weakening  $f_D$ ) and E (current limit  $I_E$ ), see the following table:

| Parameter                       | Point A              | Point B | Point C | Point D                               | Point E              |
|---------------------------------|----------------------|---------|---------|---------------------------------------|----------------------|
| Frequency in Hz                 | P561                 | P563    | P565    | P567                                  | P570                 |
| Calculation                     | Via startup software |         |         | Is required + manual input of $f_D^*$ | Via startup software |
| Current limit in % of $I_{NFI}$ | P562                 | P564    | P566    | P568                                  | P571                 |

| Parameter   | Point A              | Point B | Point C | Point D | Point E                                                                       |
|-------------|----------------------|---------|---------|---------|-------------------------------------------------------------------------------|
| Calculation | Via startup software |         |         |         | Is required + manual input of $f_{E^*}$<br>$I_{E^*} = I_E \times M_{E^*}/M_E$ |

### Maximum motor speed

The maximum motor speed must be limited in the "System limits" window. Observe the following when you set the parameter *maximum speed*:

- Maximum speed  $\leq$  start of field weakening
- Maximum speed  $\leq$  motor limit speed
- Maximum speed  $\leq$  maximum gear unit input speed  $n_{\text{emax}}$  (see gear unit nameplate) if you use a gear unit according to Directive 2014/34/EU.

### Automatic adjustment

The *automatic adjustment* parameter is activated via guided startup. Thus, the frequency inverter sets parameter *IxR value* with each enable signal. A manual change is not permitted.

### 7.3.3 Startup procedure for MOVIDRIVE® B

## INFORMATION

MOVIDRIVE® B devices are only suited for operation in the basic control range, i.e. the connected motor of equipment protection level "Gb" and "Db" must not be operated in the field weakening range. Otherwise the approval for operation in explosion-protected areas becomes void.

Observe the following points during startup:

- Use the latest MOVITOOLS® MotionStudio software version for guided startup.
- Startup can only be activated in parameter set 1 due to the current limiting function for motors with EPL "Gb" and "Db".
- The first startup must always be a complete startup.
- As the control mode, you can set both "V/f" and "vector controlled" (VFC).
- Select the matching motor series in the "Motor type" window.
- In the "Motor selection" window, choose the equipment category, the line voltage, the motor voltage, the connection type, and the type of plant configuration in addition to the motor.
- Only speed control can be selected for the application. The options "Hoist", "DC braking" or "Flying start function" must not be used.
- The operating mode must always be set to "4-quadrant operation".

### Current limit

In guided startup, the *current limit* parameter is set to 150%  $I_{N \text{ Mot}}$  in the application window. This value must be reduced according to the permitted maximum output torque at the gear unit  $M_{\text{amax}}$ .

## Current monitoring

The parameters that need to be set for monitoring the current depend on the motor.

18014402587324043

|       |                                         |         |                  |
|-------|-----------------------------------------|---------|------------------|
| $I_n$ | Nominal current in A                    | X       | Current limiting |
| $I_1$ | Permitted max. current in A             | f       | Frequency in Hz  |
| $I_2$ | Permitted continuous current range in A | A, B, C | Limiting points  |
| $I_0$ | Overload current in A                   |         |                  |

After motor startup, current limitation  $I_1$  is active. Current limitation  $I_2$  determines the current that is permanently permitted. The Ex-e motor current limiting function is activated automatically during startup for SEW-EURODRIVE motors with EPL "Gb" and "Db".

The characteristic curve for MOVIDRIVE® B is defined by operating points A, B, and C. The parameters of group P560 are preset during startup, see the following table. Additionally, the values are listed in the IECEx Certificate of Conformity (CoC).

| Parameter                       | Point A | Point B | Point C |
|---------------------------------|---------|---------|---------|
| Frequency in Hz                 | P561    | P563    | P565    |
| Current limit in % of $I_{NFI}$ | P562    | P564    | P566    |

## Maximum motor speed

The maximum motor speed must be limited in the "System limits" window. Observe the following when you set the parameter *maximum speed*:

- Maximum speed  $\leq$  start of field weakening
- Maximum speed  $\leq$  motor limit speed
- Maximum speed  $\leq$  maximum gear unit input speed  $n_{\text{emax}}$  (see gear unit nameplate) if you use a gear unit according to Directive 2014/34/EU.

## Automatic adjustment

The parameter *automatic adjustment* is activated via guided startup. Thus, the frequency inverter sets parameter *IXR value* with each enable signal. A manual change is not permitted.

Monitoring function:

A 24 V backup mode prevents that the current-time monitoring is reset in case of a disconnection from the supply system, see chapter "Overload protection".

## INFORMATION

If the mains is switched off without 24 V backup mode, the monitoring function is re-set completely.

In this case the approval for operation in explosion-protected areas becomes invalid.

### 7.3.4 Overload protection

The requirements for the overload protection of the motor are defined in the IECEx Certificate of Conformity (IECEx CoC). The following section describes the overload protection implemented in MOVITRAC® B and MOVIDRIVE® B inverters.

Operation above the permitted current range is permitted for 60 seconds. After about 50 seconds, the current is reduced to the permitted value along a ramp within 10 seconds to prevent a sudden reduction of the current limitation and thus torque shocks. The current can exceed the permitted range again after a recovery time of 10 minutes. Operation below 5 Hz is permitted for 60 seconds. After this time has elapsed, the unit switches off with fault F110 "Ex e protection" and performs an emergency stop as fault response.

The digital inputs P62\_ can be parameterized to "Ex e current limitation active".

Conditions for the output being set ("1" signal):

- Current limit 1 exceeded
- Recovery time not yet elapsed
- Operation < 5 Hz longer than 60 seconds

The current-time monitoring is not reset by a fault reset.

The current-time monitoring is active for both mains operation and 24 V backup mode.

## INFORMATION

Third-party inverters must comply with the overload protection requirements in the IECEx Certificate of Conformity (IECEx CoC).

## 7.4 Parameter setting: Frequency inverters for motors with EPL "Gc" and "Dc"

### INFORMATION

When you start up the frequency inverter, observe the operating instructions of the respective frequency inverter as well as the operating instructions of the gear unit if you use a gearmotor.

#### 7.4.1 Before startup

Prior to startup, check that all the conditions for the typical application are met, see chapter "Typical application" (→ 121). In the event of deviations from these conditions, you have to calculate the maximum terminal voltage, the field weakening range, and the torque characteristics prior to startup. The effective operating point must be below the new thermal characteristic curve.

#### 7.4.2 Startup procedure for MOVITRAC® 07B

Observe the following points during startup:

- Use the latest MOVITOOLS® MotionStudio software version for guided startup.
- Startup and operation of motors with EPL "Gc" and "Dc" is possible in parameter sets 1 and 2.
- As the control mode, you can set both "V/f" and "vector controlled" (VFC).
- For the application, you can only select speed control and hoist application. Do not use the options "DC braking" or "Flying start function".
- The operating mode must always be set to "4-quadrant operation".
- Select the matching motor series in the "Motor type" window.
- In the "Motor selection" window, choose the equipment category, the line voltage, the motor voltage, the connection type, and the type of plant configuration in addition to the motor.

#### Current limit

In guided startup, the *current limit* parameter is set to 150%  $I_{N\text{ Mot}}$  in the application window. This value must be reduced according to the permitted maximum output torque at the gear unit  $M_{\text{amax}}$ .

#### Maximum motor speed

The maximum motor speed must be limited in the "System limits" window. Observe the following when you set the parameter *maximum speed*:

- Maximum speed  $\leq$  motor limit speed
- Maximum speed  $\leq$  maximum gear unit input speed  $n_{\text{emax}}$  (see gear unit nameplate) if you use a gear unit according to Directive 2014/34/EU.

#### Automatic adjustment

The *automatic adjustment* parameter is activated via guided startup. Thus, the frequency inverter sets parameter *lxR value* with each enable signal. A manual change is not permitted.

### 7.4.3 Startup procedure for MOVIDRIVE® B

Observe the following points during startup:

- Use the latest MOVITOOLS® MotionStudio software version for guided startup.
- Startup and operation of motors with EPL "Gc" and "Dc" is possible in parameter sets 1 and 2.
- The first startup must always be a complete startup.
- As the control mode, you can set both "V/f" and "vector controlled" (VFC).
- Select the matching motor series in the "Motor type" window.
- In the "Motor selection" window, choose the equipment category, the line voltage, the motor voltage, the connection type, and the type of plant configuration in addition to the motor.
- For the application, you can only select speed control and hoist application. Do not use the options "DC braking" or "Flying start function".
- The operating mode must always be set to "4-quadrant operation".

#### Current limit

In guided startup, the *current limit* parameter is set to 150%  $I_{N\text{ Mot}}$  in the application window. This value must be reduced according to the permitted maximum output torque at the gear unit  $M_{\text{amax}}$ .

#### Maximum motor speed

The maximum motor speed must be limited in the "System limits" window. Observe the following when you set the parameter *maximum speed*:

- Maximum speed  $\leq$  start of field weakening
- Maximum speed  $\leq$  motor limit speed
- Maximum speed  $\leq$  maximum gear unit input speed  $n_{\text{emax}}$  (see gear unit nameplate) if you use a gear unit according to Directive 2014/34/EU.

#### Automatic adjustment

The *automatic adjustment* parameter is activated via guided startup. Thus, the frequency inverter sets parameter *IxR value* with each enable signal. A manual change is not permitted.

## 7.5 Motors with backstop /RS

An /RS backstop is used to block/prevent a direction of rotation of the motor. The direction of rotation is indicated by an arrow on the fan guard of the motor or on the device housing.

Observe the direction of rotation of the end shaft and the number of stages when you mount the motor to the gear unit. Do not start up the motor in blocking direction (note the correct phase angle when connecting the motor). For inspection purposes, you can operate the backstop once with half the motor voltage in blocking direction.

If a conversion is required to change the blocking direction, follow the instructions in chapter "Altering the blocking direction on motors with a backstop" (→ 212).

### 7.5.1 Limit speed of the backstop

If a motor is equipped with a backstop, the sprag lift-off speed represents the lower speed limit during operation on an inverter.

| Motors      |              | Locking torque | Lift-off speed of clamping parts | Maximum speed     |
|-------------|--------------|----------------|----------------------------------|-------------------|
|             |              | Nm             | min <sup>-1</sup>                | min <sup>-1</sup> |
| –           | EDRN63       | 95             | 890                              | 5000              |
| EDRS71      | EDRN71       | 95             | 890                              | 5000              |
| EDR..80     | EDRN80       | 130            | 860                              | 5000              |
| EDRE90/100  | EDRN90/100   | 370            | 750                              | 5000              |
| EDRE112/132 | EDRN112/132S | 490            | 730                              | 5000              |

## 8 Inspection/maintenance

### 8.1 General information

#### ⚠ WARNING

Risk of injury if the drive starts up unintentionally.

Severe or fatal injuries.

- Before you start working on the unit, disconnect the motor and all connected options from the power supply.
- Secure the motor against unintended power-up.

#### ⚠ CAUTION

Inhalation and swallowing brake abrasion when releasing the brake.

Irritation of the respiratory tract and respiratory organs.

- ✓ Wear a respirator of class FFP2 during the maintenance of brakemotors.
- Avoid swirling of the brake abrasion.
- Remove the brake abrasion with suitable extraction systems or damp cloths that bind dust.
- Make sure that there is adequate ventilation in the work environment.

#### ⚠ CAUTION

The surfaces on the drive can be very hot during operation.

Risk of burns.

- Let the motor cool down sufficiently before you start working on it.

#### NOTICE

Damage to the oil seals if the temperature is too low during installation.

Possible damage to the oil seals.

- Before assembly, make sure that the ambient temperature and the temperature of the oil seal are not below 0 °C.

#### INFORMATION

Apply grease with a grease depot to the lip of the oil seal before assembly. For further information on lubricants, refer to chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).

## INFORMATION

- Only use genuine spare parts in accordance with the valid spare and wearing parts list, otherwise the approval for use in explosion-protected areas becomes void.
- The routine test must be repeated whenever motor parts relating to explosion protection are replaced.
- Ensure that the motor is assembled correctly and all openings have been plugged after service and maintenance work.
- If the motor is opened during inspection/maintenance, it must be cleaned before closing it again.
- Clean motors in explosion-protected areas regularly. Prevent dust from building up higher than 5 mm. Do not use processes for cleaning that cause strong electrical charge.
- Explosion protection largely depends on the IP degree of protection. Therefore, always check that the seals are fitted correctly and are in perfect condition when performing any work on the machine.
- Explosion protection can only be ensured if motors are serviced and maintained correctly.
- If you repaint motors or gearmotors, observe the requirements for preventing electrostatic charging according to IEC 60079-0.

## INFORMATION

Safe operation requires regular maintenance. The user is responsible for maintenance of the drive. Adhere to the Industrial Safety Regulation, as well as to IEC 60079-17.

### Repairs

If you repair explosion-protected units, strictly observe the country-specific standards. In Germany, the operating safety regulations (BetrSichV) and the Product Safety Act (ProdSG) apply.

In case of a repair, observe the important information on checking and maintaining electrical systems as well as on repairs and maintenance of electrical devices provided in the standards IEC 60079-17 and IEC 60079-19. Only the SEW-EURODRIVE Service or repair workshops that have the necessary expertise may repair the motor.

## 8.2 Inspection and maintenance intervals

The following table lists the inspection and maintenance intervals:

| Device/part of device | Time interval                                                                                                                                                                                                                                                      | What to do?                                                                                                                                                                                                                                                                                                                                                                          |
|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

1) Wear times are subject to many factors and can be quite short. The system manufacturer must calculate the required inspection/maintenance intervals individually in accordance with the project planning documents.

2) For EDRN225 – 315 motors with relubrication device, note the shortened relubrication periods in chapter "Bearing lubrication for EDRN225 – 315 motors with relubrication device /NS".

3) The interval depends on outer influences and can be very short, e.g. in the event of high dust concentration in the environment.

## 8.2.1 Sealing points

Perform the maintenance of seals according to the following table:

| Sealing point   |                                                                        |                |                                                                                                                                                                                                                                                                                                                           |
|-----------------|------------------------------------------------------------------------|----------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Item no.        | Position                                                               | Use            | Maintenance/inspection                                                                                                                                                                                                                                                                                                    |
| [26]            | Shield ring                                                            | EDR..200 – 315 | <ul style="list-style-type: none"> <li>• Exchange during each disassembly</li> </ul>                                                                                                                                                                                                                                      |

1) The interval depends on outer influences and can be very short, e.g. in the event of high dust concentration in the environment.

### 8.3 Bearing lubrication

#### 8.3.1 Bearing lubrication for EDR..71 – 280, EDRN63 – 280 motors

In standard design, the bearings are lubricated for life.

#### 8.3.2 Bearing lubrication for EDRE250 – 280, EDRN225 – 315 motors with relubrication device /NS

EDRE250 – 280, EDRN225 – 315 motors can be equipped with a relubrication device. The following figure shows the positions of the lubrication devices.

9007199630094091

[1] Relubrication device in type A according to DIN 71412

Under normal operating conditions and at an ambient temperature between -20 °C to +40 °C, SEW-EURODRIVE uses Mobil Polyrex EM (K2P-20 DIN 51825), a polyurea-based mineral high-performance, high-temperature grease for initial lubrication.

For motors in the low temperature range up to -40 °C SEW-EURODRIVE uses SKF GXN or LGHP2, which is also a polyurea-based mineral grease.

### Relubrication

The grease can be purchased from SEW-EURODRIVE in 400 g cartridges. For the relevant order information, refer to chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).

### INFORMATION

Only mix lubricants of the same thickness type, the same base oil and the same consistency (NLGI class).

Grease the motor bearings in accordance with the information on the lubricant plate. The used grease collects inside the motor and should be removed every 6 to 8 relubrication cycles during an inspection. Each time you relubricate the bearings, ensure that the bearing is two-thirds full.

Start up the motors slowly after lubrication so that the grease is distributed evenly.

The relubrication channels leading the grease from the grease nipples to the bearings must always be filled with grease. This is usually ensured by adhering to the relubrication intervals. During maintenance work, the grease may remain in the channels and does not need to be removed.

## Re-lubrication period

For the relubrication intervals of the bearings, adhere to the requirements stated in the table:

- Ambient temperature: -20 °C to +40 °C
- Rated speed that corresponds to that of a 4-pole AC motor
- Normal load

In case of higher ambient temperatures, higher speeds, or larger loads, the relubrication intervals are shorter. Use 1.5 times of the stated quantity for the initial filling.

The relubrication channels leading the grease from the grease nipples to the bearings must always be filled with grease. This is usually ensured by adhering to the relubrication intervals. During maintenance work, the grease may remain in the channels and does not need to be removed.

| Motors                                                         | Horizontal mounting position |          | Vertical mounting position |          |

## 8.4 Reinforced bearings

### ▲ WARNING

Risk of explosion due to impermissible heating of bearing and motor.

Severe or fatal injuries.

- Do not operate cylindrical roller bearings without overhung load.

In the /ERF (reinforced bearing) option, cylindrical rolling bearings are installed on the A-side. The reinforced bearings must have overhung load applied to them and must never be operated without overhung load.

The reinforced bearings are only offered with the /NS (relubrication) option so as to facilitate optimal lubrication of the bearing.

For lubricating the bearings, observe the notes in chapter "Bearing lubrication for EDRE250 – 280, EDRN225 – 315 motors with relubrication device /NS" (→ 152).

## 8.5 Motor and brake maintenance – preliminary work

### ⚠ WARNING

Risk of injury if the drive starts up unintentionally.

Severe or fatal injuries.

- Before you start working on the unit, disconnect the motor and all connected options from the power supply.
- Secure the motor against unintended power-up.

### 8.5.1 Removing rotary encoders from EDR..71 – 132, EDRN80 – 132S motors

The following figure illustrates the disassembly procedure using the ES7. rotary encoder as an example:

[34] Tapping screw

[35] Fan guard

[220] Encoder

[361] Safety cover

[362] Expansion anchor

[619] Connection cover

[A] Retaining screws on the torque bracket

[B] Central retaining screw

[D] Cone

[F] Bore

[G] Tooth lock washer

### Disassembling ES7./AS7.encoders

1. Remove the safety cover [361], or the forced cooling fan if required.
2. Loosen the screws of the connection cover [619] and remove it. Do not disconnect the encoder cable.
3. Make sure the cone [D] does not fall out while the central retaining screw [B] is loosened. Loosen the central retaining screw [B] by 2 – 3 turns. Loosen the cone [D] by tapping lightly onto the screw head.
4. To loosen the expansion anchor [362], remove the retaining screw of the torque bracket [A]. Carefully pull the encoder [220] from the rotor bore.

### Reassembly

1. Apply a contact corrosion prevention compound, e.g. NOCO® fluid to the encoder pin.
2. Attach the expansion anchor [362] to the torque bracket of the encoder.
3. Push the encoder into the bore in the shaft end to the stop.
4. Tighten the central retaining screw [B] with the inserted tooth lock washer [G].  
⇒ Tightening torque 2.75 Nm.
5. Press the expansion anchor [362] into the fan guard [35] and check if it is seated correctly.
6. Screw the retaining screws of the torque bracket [A] into the expansion anchor [362] up to the stop. Tighten the retaining screws of the torque bracket [A].  
⇒ Tightening torque 2.25 Nm.
7. Screw on the connection cover [619].  
⇒ Tightening torque 2.25 Nm.
8. Mount the safety cover [361] onto the forced cooling fan.

### 8.5.2 Installing/removing rotary encoders from EDR..160 – 280, EDRN132M – 280 motors

The following figure illustrates the disassembly procedure using the EG7. rotary encoder as an example:

|       |               |       |                         |
|-------|---------------|-------|-------------------------|
| [1]   | Rotor         | [367] | Retaining screw         |
| [34]  | Tapping screw | [619] | Connection cover        |
| [35]  | Fan guard     | [657] | Canopy                  |
| [220] | Encoder       | [706] | Spacer bolt             |
| [232] | Screws        | [707] | Screws                  |
| [361] | Safety cover  | [715] | Screws                  |
|       |               | [B]   | Central retaining screw |

### Removing EG7., AG7. encoders

1. Proceed as follows, depending on the design:
  - ⇒ **With canopy:** Remove the screws [707] to disassemble the canopy [657]. If required, counter using a hexagon wrench SW13 on the spacer bolt [706].
  - ⇒ **Without canopy:** Remove the screws [34] to disassemble the safety cover [361].
2. Remove the forced cooling fan if required.
3. Loosen the screws of the connection cover [619] and remove it. Do not disconnect the encoder cable.
4. Remove the retaining screws of the torque bracket [232].
5. Loosen the central retaining screw [B] by 2 – 3 turns to pull off the encoder [220].

### Reassembly

1. Apply a contact corrosion prevention compound, e.g. NOCO® fluid to the encoder pin.
2. Push the encoder into the bore in the shaft end to the stop.
3. Tighten the central retaining screw [B] with the inserted tooth lock washer [G].
  - ⇒ Tightening torque 8 Nm.
4. Tighten the retaining screws of the torque bracket [232].
  - ⇒ Tightening torque 6 Nm
5. Screw on the connection cover [619].
  - ⇒ Tightening torque 2.25 Nm
6. Mount the safety cover [361] onto the forced cooling fan.
7. Mount the canopy [657] if necessary.

### 8.5.3 Removing the rotary encoders from EDR..160 – 225, EDRN132M – 225 motors with forced cooling fan option /VE

The following figure illustrates the disassembly procedure using the EG7. rotary encoder as an example:

|       |                          |       |                |
|-------|--------------------------|-------|----------------|
| [22]  | Screw                    | [935] | Torque arm     |
| [170] | Forced cooling fan guard | [936] | Screw          |
| [232] | Screws                   | [934] | Spacer bushing |
| [269] | Grommet                  | [A]   | Encoder        |

#### Removing EG7., AG7. encoders

1. Remove the screws [22] to disassemble the forced cooling fan [170].
2. Remove the cable grommet [269] with the encoder cable from the forced cooling fan [170].
3. Remove the screws [232] and [936] to disassemble the torque bracket [935].
4. Loosen the screws of the connection cover [619] and remove it. Do not disconnect the encoder cable.
5. Loosen the central retaining screw [B] by 2 – 3 turns to pull off the encoder [220].

## Reassembly

1. Apply a contact corrosion prevention compound, e.g. NOCO® fluid to the encoder pin.
2. Push the encoder into the bore in the shaft end to the stop.
3. Tighten the central retaining screw [B] with the inserted tooth lock washer [G].  
⇒ Tightening torque 8 Nm.
4. Place the torque bracket [935] onto the spacer bushing [934] and tighten the screws [936].  
⇒ Tightening torque 11 Nm.
5. Tighten the retaining screws of the torque bracket [232].  
⇒ Tightening torque 6 Nm
6. Insert the cable grommet [269] into the forced cooling fan [170].
7. Mount the forced cooling fan [170] and tighten the screws [22].  
⇒ Tightening torque 28 Nm.

#### 8.5.4 Removing the rotary encoder from EDR..315, EDRN 315 motors

The following figure illustrates the disassembly procedure using the EH7. and AH7. rotary encoders as an example:

|       |                 |       |       |
|-------|-----------------|-------|-------|
| [35]  | Fan guard       | [659] | Screw |
| [220] | Encoder         | [734] | Nut   |
| [367] | Retaining screw | [748] | Screw |
| [657] | Cover plate     |       |       |

#### Removing EH7., AH7. encoders

1. Remove the screws [659] to disassemble the cover plate [657].
2. Depending on the design, remove the encoder [220] from the fan guard [35] as follows:
  - ⇒ **EH7.:** Remove the nut [734].
  - ⇒ **AH7.:** Remove screw [748].
3. Loosen the central retaining screw [B] by 2 – 3 turns to pull off the encoder [220].

## Reassembly

1. Push the encoder into the bore in the shaft end to the stop.
2. Tighten the central retaining screw [B].
  - ⇒ **EH7.:** Tightening torque 3 Nm.
  - ⇒ **AH7.:** Tightening torque 2 Nm.
3. Proceed as follows, depending on the encoder:
  - ⇒ **EH7.:** Install the nut [734].
  - ⇒ **AH7.:** Insert and tighten the screw [748].
4. Mount the cover plate [657] using the screws [659].

### 8.5.5 Mounting/removing rotary encoders with XV../EV../AV.. mounting adapter for EDR..71 – 225, EDRN80 – 225

The following figure illustrates the disassembly procedure using a third-party encoder as an example:

9007202887906699

|       |                                                      |       |                                            |
|-------|------------------------------------------------------|-------|--------------------------------------------|
| [22]  | Screw                                                | [361] | Safety cover (normal/long)                 |
| [170] | Forced cooling fan guard                             | [269] | Grommet                                    |
| [212] | Fan guard with encoder mount                         | [A]   | Adapter                                    |
| [220] | Encoder                                              | [B]   | Clamping screw                             |
| [225] | Intermediate flange (not with XV1A)                  | [D]   | Coupling (spread- or solid shaft coupling) |
| [232] | Screws (enclosed with XV1A and XV2A)                 | [E]   | Clamping screw                             |
| [251] | Conical spring washers (enclosed with XV1A and XV2A) |       |                                            |

#### Removing XV.., EV.., AV.. encoders

1. Remove the safety cover [361], or the forced cooling fan if required.
2. Loosen the retaining screws [232] and turn the conical spring washers [251] outwards.
3. Loosen the clamping screw [E] of the coupling.
4. Remove adapter [A] and encoder [220].

#### Reassembly

1. Proceed as described in chapter "Encoder mounting adapter" (→ 41) to mount the encoder.

### 8.5.6 Mounting/removing rotary encoders with XV../EV../AV.. mounting adapter for EDR..250 – 280, EDRN250 – 280

The following figure illustrates the disassembly procedure using a third-party encoder as an example:

18014406225445899

|       |                                                      |        |                            |
|-------|------------------------------------------------------|--------|----------------------------|
| [22]  | Screw                                                | [361]  | Safety cover (normal/long) |
| [33]  | Washer                                               | [1458] | Screw                      |
| [34]  | Screw                                                | [1459] | Cage nut                   |
| [35]  | Fan guard                                            | [1460] | Serrated lock washer       |
| [220] | Encoder                                              | [1461] | Washer                     |
| [225] | Intermediate flange (optional)                       | [1462] | Screw                      |
| [226] | Screw                                                | [1489] | Ground strap               |
| [232] | Screws (enclosed with .V1A and .V2A)                 | [1496] | Serrated lock washer       |
| [233] | Coupling                                             | [1497] | Washer                     |
| [251] | Conical spring washers (enclosed with .V1A and .V2A) | [1498] | Screw                      |
| [269] | Grommet                                              | [A]    | Encoder mounting adapter   |

#### Removing the encoder mounting adapter

1. Remove the screws [34] to disassemble the safety cover [361].
2. Remove the encoder [220], see chapter "Removing EV.., AV.. encoders" (→ 164).
3. In order to remove the ground strap [1489] from the encoder mounting adapter [A], loosen the serrated lock washer [1496], washer [1497], and screw [1498].

4. Remove the screws [22] to disassemble the fan guard [35].
5. Loosen the screw [1458] to remove the encoder mounting adapter [A].
  - ⇒ **If the encoder mounting adapter cannot easily be removed:** Screw an M6 set screw (length 20 – 35 mm) hand tight in the rotor bore. Screw an M8 set screw (length > 10 mm) into the same bore and push the encoder mounting adapter [A] off the rotor [1]. Remove the M6 set screw from the rotor bore.

#### Removing EV.., AV.. encoders

1. Remove the screws [34] to disassemble the safety cover [361].
2. Pull out the cable grommet [269] together with the encoder cable from the safety cover [361].
3. Loosen the retaining screws [232] and turn the conical spring washers [251] outwards.
4. Loosen the screw at the coupling clamping hub [233] at the encoder end, the screw can be accessed through the slots of the encoder mounting adapter [A].
5. Remove the encoder [220] from the encoder mounting adapter [A] or the intermediate flange [225].

#### Reassembly

1. Proceed as described in chapter "Encoder mounting adapter" (→  41) to mount the encoder.

### 8.5.7 Mounting/removing rotary encoders with EV../AV../XV.. encoder mounting adapter for EDR..250 – 280, EDRN250 – 280 motors with forced cooling fan option /VE

The following figure illustrates the disassembly procedure using a non-SEW encoder as an example:

7715965835

|       |                                                      |        |                          |
|-------|------------------------------------------------------|--------|--------------------------|
| [22]  | Screw                                                | [269]  | Grommet                  |
| [170] | Forced cooling fan guard                             | [934]  | Spacer bushing           |
| [220] | Encoder                                              | [935]  | Torque arm               |
| [225] | Intermediate flange (optional)                       | [936]  | Screw                    |
| [226] | Screw                                                | [1458] | Screw                    |
| [232] | Screws (enclosed with .V1A and .V2A)                 | [1463] | Screw                    |
| [233] | Coupling                                             | [A]    | Encoder mounting adapter |
| [251] | Conical spring washers (enclosed with .V1A and .V2A) |        |                          |

#### Removing the encoder mounting adapter

1. Loosen the screws [22] and remove the forced cooling fan guard [170].
2. Remove the cable grommet [269] from the fan guard [170].
3. Loosen the screws [232] and turn the conical spring washers [251] to the side. Loosen the screw of the coupling clamping hub [233] on the encoder end and remove the encoder [220]. The intermediate flange [225] and screws [226] can remain at the encoder mounting adapter [A].
4. Loosen the screws [1458] and [936] and remove the encoder mounting adapter [A]. The torque brackets [935] and screws [1463] can remain at the encoder mounting adapter [A].
  - If the encoder mounting adapter [A] cannot easily be removed: Screw in a set screw M6 with 20 – 35 mm length into the rotor bore (bore for screw [1458]) and tighten it finger-tight. Screw in a set screw M8 with > 10 mm length or a screw M8 with min. 80 mm length into the same bore and push out the encoder mounting adapter [A] from the rotor [1]. Then remove the set screw M6 from the rotor again.

**Removing EV., AV., and XV. encoders**

1. Loosen the screws [22] and remove the forced cooling fan guard [170].
2. Remove the cable grommet [269] with encoder cable from the forced cooling fan guard [170].
3. Turn the conical spring washers of the encoder [220] outwards and loosen the screws [232]. Loosen the screw of the coupling clamping hub [233] on the encoder end.
4. Remove the encoder [220] from the encoder mounting adapter [A] or intermediate flange [225].

**Reassembly**

1. Proceed as described in chapter "Encoder mounting adapter" (→  41) to mount the encoder.

### 8.5.8 Removing and mounting cone shaft encoders of EDRN71 – 132S motors

9007227774284811

|       |                      |        |                    |
|-------|----------------------|--------|--------------------|
| [1]   | Rotor                | [1164] | Connection adapter |
| [22]  | Screw (hexagonal)    | [1889] | Torque arm         |
| [33]  | Washer               | [1900] | Cable retainer     |
| [34]  | Screw (cross recess) | [1901] | Accessory bag      |
| [35]  | Fan guard            | [1902] | Threaded sleeve    |
| [42]  | Rear endshield       | [1927] | Set screw          |
| [170] | Forced cooling fan   | [A]    | Screw plug         |
| [220] | Encoder              | [B]    | T-slot nut         |
| [232] | Screw (hexalobular)  | [C]    | Lower part         |
| [361] | Safety cover         | [D]    | Screw              |
| [619] | Connection cover     | [E]    | Screw              |

#### Removing encoder EK8./AK8.

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].
3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the safety cover [361].
4. Unscrew the screws [34].

5. Remove the safety cover [361] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
6. Unscrew the screws [232].
7. Unscrew the screws [22].
8. Remove the fan guard [35] over the encoder [220]. Guide the connection adapter [1164] with the signal cable through the cutout of the fan guard [35].
9. Unscrew the central screw plug [A] of the encoder [220].
10. Loosen the central retaining screw of the encoder [220].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, counter-tighten the spanner flat SW10 of the encoder shaft.
11. Loosen the cone connection.
  - ⇒ Encoder EK8., AK8W, AK8Y: To loosen the cone connection, continue turning the central retaining screw of the encoder [220] counterclockwise.
  - ⇒ Encoder AK8H: Continue turning the central retaining screw of the encoder [220] counterclockwise. To loosen the cones, screw an M6 screw ( $\geq 70$  mm long) into the bore.
12. Remove the encoder [220] from the rotor [1].

#### Mounting encoder EK8./AK8.

1. Clean the cone of the encoder [220] and the rotor [1].
2. Remove the central screw plug [A].
3. Insert the encoder [220] into the conical bore of the rotor [1].
4. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Counter-tighten the spanner flat SW10 of the insulation coupling.
  - ⇒ Tightening torque 3.3 Nm
5. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
6. Mount the fan guard [35] over the encoder [220]. When doing this, guide the connection adapter [1164] with the signal cable through the central grille cutout of the fan guard [35].
7. Use the screws [22] to secure the fan guard [35] to the rear endshield or brake endshield [42] of the motor.
  - ⇒ For metal hoods: Tightening torque 3.3 Nm.
  - ⇒ For plastic hoods: Tightening torque 2 Nm.
8. Screw the screws [232] through the grille of the fan guard [35] and into the nuts of the torque arm [1889].
  - ⇒ If you need to turn the encoder [220] in order for the screws to reach the nuts of the torque arm, turn the encoder [220] clockwise.
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the safety cover [361].
  - ⇒ Tightening torque 3.3 Nm
9. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.

10. Place the safety cover [361] onto the fan guard [35].
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
11. Fasten the safety cover [361] with the screws [34] and washers [33].
  - ⇒ Tightening torque 2 Nm
12. Turn the connection adapter [1164] clockwise up to the stop.
13. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Secure the screws [D] in place with medium-strength thread locker. Tightening torque 2 Nm.
14. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
15. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.

#### Removing encoder EK8./AK8. with optional forced cooling fan

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].
3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the forced cooling fan [170].
4. Loosen the screws [22].
5. Unscrew the screws [34].
6. Remove the forced cooling fan [170] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
7. Unscrew the screws [232].
8. Remove the signal cable from the slot of the cable retainer [1900].
9. Unscrew the screws [22].
10. Remove the fan guard [35] over the encoder [220]. Guide the connection adapter [1164] with the signal cable through the cutout of the fan guard [35].
11. Unscrew the central screw plug [A] of the encoder [220].
12. Loosen the central retaining screw of the encoder [220].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, counter-tighten the spanner flat SW10 of the encoder shaft.
13. Loosen the cone connection.
  - ⇒ Encoder EK8., AK8W, AK8Y: To loosen the cone connection, continue turning the central retaining screw of the encoder [220] counterclockwise.

- ⇒ Encoder AK8H: Continue turning the central retaining screw of the encoder [220] counterclockwise. To loosen the cones, screw an M6 screw ( $\geq 70$  mm long) into the bore.
- 14. Remove the encoder [220] from the rotor [1].

#### Mounting encoder EK8./AK8. with optional forced cooling fan

1. Clean the cone of the encoder [220] and the rotor [1].
2. Remove the central screw plug [A].
3. Insert the encoder [220] into the conical bore of the rotor [1].
4. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Counter-tighten the spanner flat SW10 of the encoder shaft.
  - ⇒ Tightening torque 3.3 Nm
5. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
6. Mount the fan guard [35] over the encoder [220]. When doing this, guide the connection adapter [1164] with the signal cable through the central grille cutout of the fan guard [35].
7. Position the screws [22] of the fan guard [35] on the rear or brake endshield [42] of the motor.
8. Screw the screws [232] through the grille of the fan guard [35] and into the nuts of the torque arm [1889].
  - ⇒ If you need to turn the encoder [220] in order for the screws to reach the nuts of the torque arm, turn the encoder [220] clockwise.
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the forced cooling fan [170].
  - ⇒ Tightening torque 3.3 Nm
9. **⚠ CAUTION!**  
Improper mounting can cause damage to the equipment. Damage to the signal cable. Insert the signal cable of the encoder [220] into the curve of the cable support [1900] so that the signal cable does not touch the rotating forced cooling fan.
10. To turn the cable retainer [1900], loosen the set screw [1927].
11. To secure the cable retainer [1900] in place, tighten the set screw [1927].
  - ⇒ Tightening torque 1.8 Nm
12. Place the forced cooling fan [170] onto the fan guard [35].
13. Insert the connection adapter [1164] into the recess of the forced cooling fan [170]. The standard alignment of the recess points towards the terminal box.
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
14. Use the screws [22] to secure the fan guard [35] to the rear endshield or brake endshield [42] of the motor.
  - ⇒ For metal hoods: Tightening torque 3.3 Nm.

- ⇒ For plastic hoods: Tightening torque 2 Nm.
- 15. Fasten the forced cooling fan with the screws [34] and washers [33].
  - ⇒ Tightening torque 2 Nm
- 16. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.
- 17. Turn the connection adapter [1164] clockwise up to the stop.
- 18. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Secure the screws [D] in place with medium-strength thread locker. Tightening torque 2 Nm.
- 19. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
- 20. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.

### 8.5.9 Removing and mounting cone shaft encoders of EDRN132M – 315 motors

9007227788914699

|       |                      |        |                 |

| [1889] | Torque arm           | [E]    | Screw                  |

### Removing encoder EK8./AK8.

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].

3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the safety cover [361].
4. Unscrew the screws [34].
5. Remove the safety cover [361] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
6. Unscrew the screws [232].
7. Unscrew the screws [22].
8. Remove the fan guard [35] over the encoder [220]. Guide the connection adapter [1164] with the signal cable through the cutout of the fan guard [35].
9. Unscrew the central screw plug [A] of the encoder [220].
10. Loosen the central retaining screw of the encoder [220].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, counter-tighten the spanner flat SW10 of the encoder shaft.
11. Loosen the cone connection.
  - ⇒ Encoder EK8., AK8W, AK8Y: To loosen the cone connection, continue turning the central retaining screw of the encoder [220] counterclockwise.
  - ⇒ Encoder AK8H: Continue turning the central retaining screw of the encoder [220] counterclockwise. To loosen the cones, screw an M6 screw ( $\geq 70$  mm long) into the bore.
12. Remove the encoder [220] from the rotor [1].
13. For optional insulation coupling: Remove the encoder [220] from the insulation coupling [1891].

### Mounting encoder EK8./AK8.

1. Clean the cone of the encoder [220] and the rotor [1].
2. For optional insulation coupling: Clean the cones of the insulation coupling [1891].
3. Remove the central screw plug [A].
4. For optional insulation coupling: The insulation coupling [1891] must be mounted before the encoder is mounted. Insert the insulation coupling [1891] into the conical bore of the rotor [1]. To secure the insulation coupling in place, tighten the central retaining screw.
  - ⇒ Counter-tighten the spanner flat SW10 of the insulation coupling.
  - ⇒ Tightening torque 3.3 Nm
5. Insert the encoder [220] into the conical bore of the rotor [1].
6. In the case of the insulation coupling option: Insert the encoder [220] into the conical bore of the insulation coupling [1891].
7. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Counter-tighten the spanner flat SW10 of the encoder shaft.
  - ⇒ Tightening torque 3.3 Nm
8. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm

9. Mount the fan guard [35] over the encoder [220]. When doing this, guide the connection adapter [1164] with the signal cable through the central grille cutout of the fan guard [35].
10. Use the screws [22] to secure the fan guard [35] to the rear endshield or brake endshield [42] of the motor.
  - ⇒ EDRN132M – L: Tightening torque 11.3 Nm
  - ⇒ EDRN160M – L: Tightening torque 27.3 Nm
  - ⇒ EDRN315: Secure the screws [22] using a medium-strength thread locker. Tightening torque 5 Nm.
11. Screw the screws [232] through the support ring/spacer ring [1895] or the grille on the fan guard [35] into the nuts on the torque arm [1889].
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the safety cover [361].
  - ⇒ Tightening torque 3.3 Nm
12. Place the safety cover [361] onto the fan guard [35].
  - ⇒ The standard alignment of the recess points towards the terminal box.
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
13. Fasten the safety cover [361] with the screws [34] and washers [33].
  - ⇒ Tightening torque 4.5 Nm
14. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.
15. Turn the connection adapter [1164] clockwise up to the stop.
16. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Secure the screws [D] in place with medium-strength thread locker. Tightening torque 2 Nm.
17. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
18. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.

#### Removing encoder EK8./AK8. with optional forced cooling fan

1. In motors of sizes 250 – 315: If the screws [1893] are available, unscrew the screws. Remove the supporting plate [1892]. Push the sealing profile [1310]/[1965] out of the cutout.
2. Unscrew the screws [E].
3. Remove the connection cover [619] from the connection adapter [1164].

4. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the forced cooling fan [170].
5. Unscrew the screws [22].
6. Remove the forced cooling fan [170] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
7. Unscrew the screws [232].
8. Remove the signal cable from the slot of the cable retainer [1900].
9. To remove the torque bracket [935], loosen the screw [936]/hex nut [937]. Guide the connection adapter [1164] with the signal cable through the cutout of the torque bracket [935].
10. Loosen the central retaining screw of the encoder [220].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, counter-tighten the spanner flat SW10 of the encoder shaft.
11. Loosen the cone connection.
  - ⇒ Encoder EK8., AK8W, AK8Y: To loosen the cone connection, continue turning the central retaining screw of the encoder [220] counterclockwise.
  - ⇒ Encoder AK8H: Continue turning the central retaining screw of the encoder [220] counterclockwise. To loosen the cones, screw an M6 screw ( $\geq 70$  mm long) into the bore.
12. Remove the encoder [220] from the rotor [1].
13. For optional insulation coupling: Remove the encoder [220] from the insulation coupling [1891].

#### **Mounting encoder EK8./AK8. with optional forced cooling fan**

1. Clean the cone of the encoder [220] and the rotor [1].
2. For optional insulation coupling: Clean the cones of the insulation coupling [1891].
3. Remove the central screw plug [A].
4. For optional insulation coupling: The insulation coupling [1891] must be mounted before the encoder is mounted. Insert the insulation coupling [1891] into the conical bore of the rotor [1]. To secure the insulation coupling in place, tighten the central retaining screw.
  - ⇒ Counter-tighten the spanner flat SW10 of the encoder shaft.
  - ⇒ Tightening torque 3.3 Nm
5. Insert the encoder [220] into the conical bore of the rotor [1].
6. In the case of the insulation coupling option: Insert the encoder [220] into the conical bore of the insulation coupling [1891].
7. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Counter-tighten the spanner flat SW10 of the encoder shaft.
  - ⇒ Tightening torque 3.3 Nm
8. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
9. Guide the torque arm [935] over the connection adapter [1164] and the encoder [220].

10. For optional insulation coupling: Mount the spacer bolt [1625].
  - ⇒ M6 screw: Tightening torque 11.3 Nm
  - ⇒ M8 screw: Tightening torque 27.3 Nm
11. When mounting the torque arm [935], make sure it is aligned centrally to the encoder [220]. Screw in the screw [936]/hex nut [937] with the spacer bushings [934].
  - ⇒ M6 screw: Tightening torque 11.3 Nm
  - ⇒ M8 screw: Tightening torque 27.3 Nm
12. **▲ CAUTION!**  
 Improper mounting can cause damage to the equipment. Damage to the signal cable. Insert the signal cable of the encoder [220] into the curve of the cable support [1900] so that the signal cable does not touch the rotating forced cooling fan.
13. To turn the cable retainer [1900], loosen the set screw [1927].
14. To secure the cable retainer [1900] in place, tighten the set screw [1927].
  - ⇒ Tightening torque 1.8 Nm
15. To secure the torque arm [1889] of the encoder in place, screw the screws [232] into the bores of the torque arm [935].
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the forced cooling fan [170].
16. Place the forced cooling fan [170] onto the rear endshield or brake endshield [42].
17. Insert the connection adapter [1164] into the recess of the forced cooling fan [170]. The standard alignment of the recess points towards the terminal box.
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
18. Fasten the forced cooling fan [170] with the screws [22] on the rear or brake endshield [42] of the motor.
  - ⇒ EDRN132M – L: Tightening torque 11.3 Nm
  - ⇒ EDRN160M – L: Tightening torque 27.3 Nm
  - ⇒ EDRN315: Secure the screws [22] using a medium-strength thread locker. Tightening torque 5 Nm.
19. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.
20. In motors of sizes 250 – 315: To fasten the supporting plate [1892], screw in the screws [1893]. Push the sealing profile [1310]/[1965] into the cutout.
21. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Secure the screws [D] in place with medium-strength thread locker. Tightening torque 2 Nm.

22. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
23. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.

### 8.5.10 Encoder mounting adapter EK8A

The EK8A... encoder mounting adapter

Content of the accessory bag [1634]

- Screws [232] for fastening the torque arm of the encoder [220]
- For size EDRN180 and larger: Insulation coupling [1891]

### Mounting the encoder mounting adapter EK8A

1. Unscrew the screws [22].
2. Remove the fan guard [35] from the motor.
3. Remove the protection cap [1143] from the recess of the fan guard [35].
  - ⇒ Dispose of the protection cap [1143].
4. Remove the closing plug [950] from the rotor [1].
  - ⇒ Dispose of the closing plug [950].

Then proceed with the installation process as described in chapter "Mounting cone shaft encoders EK8./AK8.".

### 8.5.11 EV8./AV8. encoder with coupling

#### Removing and mounting EV8./AV8. encoder with coupling from EDRN71 – 225 motors

*Removing encoder EV8./AV8. with coupling*

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].
3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the safety cover [361].
4. Unscrew the screws [22].
5. Remove the safety cover [361] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
6. Unscrew the screws [232].
7. Remove the eccentric disks [251] from the circumferential groove of the encoder [220].
8. Unscrew the central screw plug [A] of the encoder [220].
9. Loosen the central retaining screw of the encoder [220].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, exert counter-pressure at the Ø 4.1 mm bore of the rear coupling half.
10. Remove the encoder [220] from the coupling [233].

*Mounting encoder EV8./AV8. with coupling*

1. Remove the central screw plug [A].
2. If the closing plate [646] is present: Unscrew the screws [232] and remove the closing plate [646].
3. Clean the cone of the rotor [1], the encoder [220] and the coupling [233].
4. Insert the coupling [233] into the conical bore of the rotor.
5. To secure the coupling [233] in place, screw in the central retaining screw [F].
  - ⇒ Tightening torque 4 Nm
  - ⇒ Exert counter-pressure at the Ø 4.1 mm bore of the rear coupling half.
6. To remove the torque arm [1889] from the encoder, unscrew the screws [1888].
7. Remove the central screw plug [A].
  - ⇒ For size DRN132M/L: Place the spacer ring [225] between the encoder [220] and the fan guard with encoder mount [212].
8. Insert the encoder [220] into the coupling half with conical bore [233].
9. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Tightening torque 3.3 Nm
  - ⇒ Exert counter-pressure at the Ø 4.1 mm bore of the rear coupling half.
10. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
11. Insert the screws [232] to fasten the conical spring washers [251].
12. Tighten the screws [232] while turning the eccentric disks [251] in clockwise direction into the groove of the encoder [220].
  - ⇒ Tightening torque 3 Nm
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the safety cover [361].
13. Insert the connection adapter [1164] into the recess of the safety cover [361]. The standard alignment of the recess points towards the terminal box.
14. Place the safety cover [361] onto the fan guard [35].
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
15. Secure the safety cover [361] in place by using the screws [22].
  - ⇒ EDRN71 – 132S: Tightening torque 3.3 Nm
  - ⇒ EDRN132M – L: Tightening torque 11.3 Nm
  - ⇒ EDRN160M – L: Tightening torque 27.3 Nm
16. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.
17. Turn the connection adapter [1164] clockwise up to the stop.

18. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Secure the screws [D] in place with medium-strength thread locker. Tightening torque 2 Nm.
19. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
20. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.

#### *Removing encoder EV8./AV8. with coupling and optional forced cooling fan*

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].
3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the safety cover [361].
4. Loosen the screws [22].
5. Unscrew the screws [34].
6. Remove the forced cooling fan [170] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
7. Remove the signal cable from the slot of the cable retainer [1900].
8. Unscrew the screws [232].
9. Remove the eccentric disks [251] from the circumferential groove of the encoder [220].
10. Unscrew the central screw plug [A] of the encoder [220].
11. Loosen the central retaining screw of the encoder [220].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, exert counter-pressure at the Ø 4.1 mm bore of the rear coupling half.
12. Remove the encoder [220] from the coupling [233].

#### *Mounting encoder EV8./AV8. with coupling and optional forced cooling fan*

1. Remove the central screw plug [A].
2. If the closing plate [646] is present: Unscrew the screws [232] and remove the closing plate [646].
3. Clean the cone of the rotor [1], the encoder [220] and the coupling [233].
4. Insert the coupling [233] into the conical bore of the rotor.
5. To secure the coupling [233] in place, screw in the central retaining screw [F].
  - ⇒ Tightening torque 3.3 Nm
  - ⇒ Exert counter-pressure at the Ø 4.1 mm bore of the rear coupling half.
6. To remove the torque arm [1889] from the encoder, unscrew the screws [1888].

7. Remove the central screw plug [A].
  - ⇒ For size EDRN132M/L: Place the spacer ring [225] between the encoder [220] and the fan guard with encoder mount [212].
8. Insert the encoder [220] into the coupling half with conical bore [233].
9. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Tightening torque 3.3 Nm
  - ⇒ Exert counter-pressure at the Ø 4.1 mm bore of the rear coupling half.
10. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
11. Insert the screws [232] to fasten the conical spring washers [251].
12. Tighten the screws [232] while turning the eccentric disks [251] in clockwise direction into the groove of the encoder [220].
  - ⇒ Tightening torque 3 Nm
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the forced cooling fan [170].
13. **▲ CAUTION!**  
 Improper mounting can cause damage to the equipment. Damage to the signal cable. Insert the signal cable of the encoder [220] into the curve of the cable support [1900] so that the signal cable does not touch the rotating forced cooling fan.
14. To turn the cable retainer [1900], loosen the set screw [1927].
15. To secure the cable retainer [1900] in place, tighten the set screw [1927].
  - ⇒ Tightening torque 1.8 Nm
16. Place the forced cooling fan [170] onto the fan guard with encoder mount [212].
17. Insert the connection adapter [1164] into the recess of the forced cooling fan [170]. The standard alignment of the recess points towards the terminal box.
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
18. Use the screws [22] to secure the forced cooling fan [170] to the fan guard with encoder mount [212] of the motor.
  - ⇒ EDRN71 – 132S: Tightening torque 3.3 Nm
  - ⇒ EDRN132M – L: Tightening torque 11.3 Nm
  - ⇒ EDRN160M – L: Tightening torque 27.3 Nm
19. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.
20. Turn the connection adapter [1164] clockwise up to the stop.
21. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Secure the screws [D] in place with medium-strength thread locker. Tightening torque 2 Nm.

22. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
23. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Secure the screws [E] using a medium-strength thread locker. The tightening torque is 2.5 Nm.

### Removing and mounting encoder EV8./AV8. with coupling from EDRN250 – 280 motors

#### *Removing encoder EV8./AV8. with coupling*

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].
3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the safety cover [361].
4. Unscrew the screws [34].
5. Remove the safety cover [361] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
6. Unscrew the screws [232].
7. Remove the eccentric disks [251] from the circumferential groove of the encoder [220].
8. Remove the encoder [220] from the intermediate flange [225].
9. Unscrew the central screw plug [A] of the encoder [220].
10. Loosen the central retaining screw of the encoder [220].
11. Remove the encoder with the mounted rear coupling half [233] from the mounting adapter [1499].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, counter-tighten the spanner flat SW10 of the encoder shaft.
12. Remove the encoder [220] from the coupling [233].

#### *Mounting encoder EV8./AV8. with coupling*

1. Clean the cone of the rotor [1], the encoder mounting adapter [1499] and the coupling [233].
2. Insert the encoder mounting adapter [1499] into the conical bore of the rotor [1].
3. To secure the encoder mounting adapter [1499] in place, screw in the central retaining screw [1458].
  - ⇒ Tightening torque 3.3 Nm
4. Use the screws [22] to secure the fan guard [35] to the rear endshield or brake endshield [42] of the motor.
  - ⇒ While doing so, the plastic dampers [1486] of the torque arm for the encoder mounting adapter [1499] must engage into the grille of the fan guard [35].
  - ⇒ Tightening torque 27.3 Nm.

5. To secure the ground strap [1495] to the encoder mounting adapter [1499], screw in the screw [1498].
  - ⇒ Tightening torque 6.5 Nm
6. To secure the ground strap [1495] to the fan guard [35], screw the screw [1462] into the cage nut [1459].
  - ⇒ Tightening torque 11.3 Nm.
7. Place the coupling half with cylindrical internal bore [233] onto the inner pin of the encoder mounting adapter [1499].
8. To secure the coupling half with cylindrical internal bore [233] in place, screw the screw into the conical spring washer of the coupling [233].
  - ⇒ Tightening torque 3.3 Nm
9. To secure the intermediate flange [225] to the encoder mounting adapter [1499], screw in the screw [226].
  - ⇒ Tightening torque 3.3 Nm
10. To remove the torque arm [1889] from the encoder, unscrew the screws [1888].
11. Remove the central screw plug [A].
12. Insert the encoder [220] into the coupling half with conical bore [233].
13. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Tightening torque 3.3 Nm
  - ⇒ Counter-tighten the spanner flat SW10 of the encoder shaft.
14. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
15. Insert the encoder [220] with mounted coupling half into the centering of the intermediate flange [225]. The two coupling halves must interlock via the plastic coupling star.
16. Insert the screws [232] to fasten the conical spring washers [251].
17. Tighten the screws [232] while turning the eccentric disks [251] in clockwise direction into the groove of the encoder [220].
  - ⇒ Tightening torque 3 Nm
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the safety cover [361].
18. Insert the connection adapter [1164] into the recess of the safety cover [361]. The standard alignment of the recess points towards the terminal box.
19. Place the safety cover [361] onto the fan guard [35].
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].
  - ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
20. Fasten the safety cover [361] with the screws [34] and washers [33].
  - ⇒ Tightening torque 4.5 Nm
21. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.

22. Turn the connection adapter [1164] clockwise up to the stop.
23. Secure the connection adapter [1164] in place by tightening the screws [D].
  - ⇒ Tightening torque 2 Nm
24. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
25. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
  - ⇒ Tightening torque 2.5 Nm

#### *Removing encoder EV8./AV8. with coupling and optional forced cooling fan*

1. Unscrew the screws [E].
2. Remove the connection cover [619] from the connection adapter [1164].
3. Loosen the screws [D] in the lower part [C].
  - ⇒ Only unscrew the screws [D] to such an extent that the connection adapter [1164] can be moved in the recess of the forced cooling fan [170].
4. Unscrew the screws [22].
5. Remove the forced cooling fan [170] from the motor. When doing this, slide the connection adapter [1164] out of the recess.
6. If necessary, loosen the set screw [1927].
7. Remove the signal cable from the slot of the cable retainer [1900].
8. Unscrew the screws [232].
9. Remove the eccentric disks [251] from the circumferential groove of the encoder [220].
10. Remove the encoder [220] from the intermediate flange [225].
11. Unscrew the central screw plug [A] of the encoder [220].
12. Loosen the central retaining screw of the encoder [220].
13. Remove the encoder with the mounted rear coupling half [233] from the mounting adapter [1499].
  - ⇒ If the central retaining screw of the encoder [220] cannot be loosened, counter-tighten the spanner flat SW10 of the encoder shaft.
14. Remove the encoder [220] from the coupling [233].

#### *Mounting encoder EV8./AV8. with coupling and optional forced cooling fan*

1. Clean the cone of the rotor [1], the encoder mounting adapter [1499] and the coupling [233].
2. Insert the encoder mounting adapter [1499] into the conical bore of the rotor [1].
3. To secure the encoder mounting adapter [1499] in place, screw in the central retaining screw [1458].
  - ⇒ Tightening torque 3.3 Nm
4. Use the screws [1485] to secure the torque arm [935] to the mounting adapter [1499].
  - ⇒ Tightening torque 6 Nm

5. Use the sleeves [934], screws [936] and washers [1666] to secure the torque arm [935] to the rear endshield or brake endshield [42].
  - ⇒ Tightening torque 11.3 Nm.
6. Use the screws [22] to secure the fan guard [35] to the rear endshield or brake endshield [42] of the motor.
  - ⇒ While doing so, the plastic dampers [1486] of the torque arm for the encoder mounting adapter [1499] must engage into the grille of the fan guard [35].
  - ⇒ Tightening torque 27.3 Nm.
7. Place the coupling half with cylindrical internal bore [233] onto the inner pin of the encoder mounting adapter [1499].
8. To secure the coupling half with cylindrical internal bore [233] in place, screw the screw into the conical spring washer of the coupling [233].
  - ⇒ Tightening torque 3.3 Nm
9. To secure the intermediate flange [225] to the encoder mounting adapter [1499], screw in the screw [226].
  - ⇒ Tightening torque 3.3 Nm
10. To remove the torque arm [1889] from the encoder, unscrew the screws [1888].
11. Remove the central screw plug [A].
12. Insert the encoder [220] into the coupling half with conical bore [233].
13. To secure the encoder [220] in place, tighten the central retaining screw.
  - ⇒ Tightening torque 3.3 Nm
  - ⇒ Counter-tighten the spanner flat SW10 of the encoder shaft.
14. To seal the encoder [220], screw in the central screw plug [A].
  - ⇒ Tightening torque 1.8 Nm
15. Insert the encoder [220] with mounted coupling half into the centering of the intermediate flange [225]. The two coupling halves must interlock via the plastic coupling star.
16. Insert the screws [232] to fasten the conical spring washers [251].
17. Tighten the screws [232] while turning the eccentric disks [251] in clockwise direction into the groove of the encoder [220].
  - ⇒ Tightening torque 3 Nm
  - ⇒ Make sure the signal cable is of a sufficient length so that the connection adapter [1164] can be inserted into the recess of the safety cover [361].
18. **▲ CAUTION!**  
 Improper mounting can cause damage to the equipment. Damage to the signal cable. Insert the signal cable of the encoder [220] into the curve of the cable support [1900] so that the signal cable does not touch the rotating forced cooling fan.
19. To turn the cable retainer [1900], loosen the set screw [1927].
20. To secure the cable retainer [1900] in place, tighten the set screw [1927].
  - ⇒ Tightening torque 1.8 Nm
21. Insert the connection adapter [1164] into the recess of the forced cooling fan [170]. The standard alignment of the recess points towards the terminal box.
  - ⇒ The arrow that is cast in the lower part [C] of the connection adapter [1164] indicates the direction of the subsequent cable outlet for the connection cover [619].

- ⇒ If you wish to change the direction of the cable outlet: Unscrew the screws [D]. Twist the lower part [C] against the T-slot nut [B]. Screw in the screws [D]. When doing so, only tighten the screws [D] lightly.
- 22. Fasten the forced cooling fan [170] with the screws [22] on the rear or brake end-shield [42] of the motor.
- ⇒ Tightening torque 27.3 Nm.
- 23. Push the connection adapter [1164] into the cutout on the safety cover [361] as far as the end of the cutout on the forced cooling fan [170] that faces away from the motor.
- 24. In motors of sizes 250 – 315: To fasten the supporting plate [1892], screw in the screws [1893]. Push the sealing profile [1310]/[1965] into the cutout.
- 25. Secure the connection adapter [1164] in place by tightening the screws [D].
- ⇒ Tightening torque 2 Nm
- 26. **▲ WARNING!** Risk of explosion due to contamination. Fatal or serious injuries. Before you position the connection cover [619] make sure the wiring space is free from dust and humidity. Remove any dirt from the wiring space. Place the connection cover [619] onto the connection adapter [1164].
- 27. Screw the screws [E] through the bores on the connection cover [619] into the bores on the connection adapter [1164].
- ⇒ Tightening torque 2.5 Nm

### 8.5.12 Mounting the forced cooling fan /VE

The following figure shows a forced cooling fan /VE:

9007199576904075

[1] Forced cooling fan

1. Observe the operating instructions of the forced cooling fan in chapters "Operating and maintenance instructions for WISTRO forced cooling fan", "Operation and maintenance instructions for forced cooling fan /VE with part number groups 2097... and 2098..." (→ 269).
2. Before installing the forced cooling fan [170], check to see that the fan wheel and the fan motor are not damaged.
3. After installation, turn the fan wheel to make sure that the fan wheel does not rub in any place. The clearance between the fan wheel and fixed parts must be at least 1 mm.

## 8.6 Inspection/maintenance work for EDRN63 – 315 motors

### 8.6.1 Inspection steps for EDRN63 – 315 motors

#### ⚠ WARNING

Risk of crushing if the drive starts up unintentionally.

Severe or fatal injuries.

- Disconnect the motor and all connected options from the power supply before you start working.
- Secure the motor against unintended power-up.

1. For gearmotors: Remove the motor from the gear unit.  
Remove pinion and oil flinger [107].
2. Remove forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
3. Remove the fan guard [35] and fan [36].
4. Removing the stator:
  - **EDRN71 – 132S motors:** Remove cap screws [13] from flanged endshield [7] and rear endshield [42]. Remove stator [16] from flanged endshield [7].
  - **EDRN63, EDRN132M – 180 motors:** Loosen cap screws [19] and remove the rear endshield [42]. Loosen hex head screw [13]/[15] and remove the stator from the flanged endshield [7].
  - **EDRN200 motors**
    - Loosen hex head screw [15] and remove the flanged endshield [7] from the stator.
    - Loosen cap screws [19] and remove the complete rotor [1] together with the rear endshield [42].
    - Loosen cap screws [25] and remove the complete rotor [1] from the rear endshield [42].
  - **EDRN225 – 280 motors without /ERF or /NS option**
    - Loosen cap screws [15] and remove the flange [7].
    - Loosen cap screws [19] and remove the rear endshield [42] together with the rotor [1].
    - Loosen cap screws [25] and remove the rear endshield [42] from the rotor [1].
  - **EDRN225 – 280 motors with /ERF or /NS option, or EDRN315 motors**
    - Loosen cap screws [19] and [25] and remove the rear endshield [42].
    - Loosen cap screws [15] and remove the flange [7] together with the rotor [1].  
Apply tension or pressure to the rotor [1], carry the flange [7] evenly.
    - Loosen hex head screws [609] and remove the flange [7] from the rotor [1].
    - Before disassembly, protect the oil seal seat from damage using adhesive tape or a protective sleeve.
5. Visual inspection: Is there any moisture or gear oil inside the stator?
  - If not, proceed with step 7.
  - If there is moisture, proceed with step 6.

- If there is gear oil, have the motor repaired by a specialist workshop.
6. If there is moisture inside the stator:
    - For gearmotors: Remove the motor from the gear unit.
    - For motors without a gear unit: Remove the A-flange.
    - Remove the rotor [1].
    - Clean the winding, dry it and check it electrically, see chapter "Drying the electric cylinder" (→ 37).
  7. Replace the rolling bearing [11], [44] with permitted rolling bearing types, see chapter "Permitted rolling bearings" (→ 236).  
Apply tension or pressure to the inner ring of the bearings.
  8. **EDRN225 – 280 motors with /ERF or /NS option, or EDRN315 motors**
    - Fill the rolling bearing with grease until it is two-thirds full, see chapter "Bearing lubrication" (→ 152).
    - Notice: Place the oil seal flanges [608] and [21] onto the rotor shaft before installing the bearings.
    - Mount the motor vertically starting on the A-side.
    - Place the springs [105] and lubrication ring [604] into the bearing bore of the flange [7].
    - Hang the rotor [1] onto the B-side thread, and guide it into the flange [7].
    - Fasten the oil seal flange [608] to the flange [7] using the hex head screws [609].
  9. Resealing the shaft:
    - A-side: Replace the oil seal [106].
    - B-side: Replace the oil seal [30].

Coat the sealing lip with grease (Klüber Petamo GHY 133).
  10. Resealing the stator seat:
    - Seal the sealing surface with duroplastic sealing compound (operating temperature -40 °C to +180 °C), such as "SEW-L-Spezial".
    - For **EDRN63 – 132S** motors: Replace the seal [392].
    - For **EDRN63 – 132S** motors: Replace the O-ring [1480] if it is deformed or damaged. Instead of the O-ring, you can use "SEW-L-Spezial" for example.
  11. Install the motor and options.

## 8.7 Inspection/maintenance work EDR..71 – 315, EDRN63 – 315 brakemotors

### 8.7.1 Basic structure of EDR..71 – 80, EDRN63 – 80 brakemotors

9007227459873163

|      |                 |      |                  |       |                           |
|------|-----------------|------|------------------|-------|---------------------------|
| [1]  | Motor           | [51] | Hand lever (/HR) | [70]  | Driver                    |

| [32] | Retaining ring  | [58] | Hex nut          | [392] | Gasket                    |
| [35] | Fan guard       | [59] | Parallel pin     | [550] | Pre-assembled brake       |
| [36] | Fan wheel       | [62] | Retaining ring   | [900] | Screw                     |
| [42] | Brake endshield | [64] | Set screw (/HF)  | [901] | Flat gasket               |
| [46] | Clip            |      |                  |       |                           |

## 8.7.2 Basic structure of EDR..90 – 132, EDRN90 – 132S brakemotors

18014398689463947

|      |                                                                 |      |                 |       |                     |
|------|-----------------------------------------------------------------|------|-----------------|-------|---------------------|
| [1]  | Motor                                                           | [56] | Stud            | [71]  | Key                 |
| [22] | Hex head screw                                                  | [57] | Conical spring  | [95]  | Sealing ring        |
| [32] | Retaining ring                                                  | [58] | Hex nut         | [157] | Clamping strap      |
| [35] | Fan guard                                                       | [59] | Parallel pin    | [550] | Pre-assembled brake |
| [36] | Fan wheel                                                       | [62] | Retaining ring  | [900] | Screw               |
| [42] | Brake endshield                                                 | [64] | Set screw (/HF) | [901] | Gasket              |
| [46] | Clamp                                                           | [70] | Driver          |       |                     |
| [47] | O-ring                                                          |      |                 |       |                     |
| [51] | Hand lever (/HR)                                                |      |                 |       |                     |
| [53] | Releasing lever                                                 |      |                 |       |                     |
| [55] | Fan guard closing piece (EDR..112 – 132, EDRN112 – 132S motors) |      |                 |       |                     |

## 8.7.3 Basic structure of EDR..160 – 315, EDRN132M – 315 brakemotor

18932069899

|                                |                      |                                                           |
|--------------------------------|----------------------|-----------------------------------------------------------|
| [1] Motor with brake endshield | [53] Releasing lever | [95] Sealing ring                                         |
| [22] Hex head screw            | [55] Closing piece   | [157] Clamping strap                                      |
| [31] Key                       | [56] Stud            | [255] Conical seat                                        |
| [32] Retaining ring            | [57] Conical spring  | [256] Spherical washer                                    |
| [35] Fan guard                 | [58] Hex nut         | [390] O-ring (EDR..160 – 225, EDRN132M – 225 motors)      |
| [36] Fan                       | [58] Adjusting nut   | [418] Cable gland                                         |
| [42] Brake endshield           | [62] Retaining ring  | [550] Pre-assembled brake                                 |
| [46] Clamp                     | [64] Set screw (/HF) | [698] Connector complete (BE20 – BE122)                   |
| [47] O-ring                    | [70] Driver          | [900] Screw                                               |
| [51] Hand lever                | [71] Key             | [901] O-ring/seal (EDR..160 – 225, EDRN132M – 225 motors) |
|                                |                      | [1607] O-ring (EDR..250 – 280, EDRN250 – 280 motors)      |

## 8.7.4 Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors

### ▲ WARNING

Risk of crushing if the drive starts up unintentionally.

Severe or fatal injuries.

- Disconnect the motor and all connected options from the power supply before you start working.
- Secure the motor against unintended power-up.

1. With gearmotors: Remove the motor from the gear unit. Remove pinion and oil flinger [107].
2. Remove forced cooling fan and rotary encoder, if installed. See chapter "Motor and brake maintenance – preliminary work" (→ 154).
3. Remove the fan guard with encoder mount [212] or fan guard [35] and the fan fan impeller [36].
4. **EDR..90 – 315, EDRN63 – 315 motors:** Remove the brake cpl. [550] (if applicable) with mounted /HR, /HF option manual brake release.
  - **BE03 – 11:** Remove the terminal box cover and loosen the brake cable from the connection terminals.
  - **BE20 – 122:** Loosen locking screws of the brake plug connector [698] and remove plug connector.
  - Loosen screws [13]/[19]/[900], press brake [550] off the endshield [42], and carefully lift off the brake.
5. Remove stator:
  - **EDR..71 – 132, EDRN63 – 132S motors:** Remove cap screws [13] from flanged endshield [7] and B-side endshield [42]. Remove stator [16] from flanged endshield [7].
  - **EDR..160 – 180, EDRN132M – 180 motors:** Loosen hex head screw [19] and remove B-side endshield [42]. Loosen hex head screw [13]/[15] and remove stator from flanged endshield [7].
  - **EDR..200 – 225, EDRN200 – 225 motors**
    - Loosen hex head screw [15] and remove flanged endshield [7] from stator.
    - Loosen cap screws [19] and remove the complete rotor [1] together with the B-side endshield [42].
    - Loosen cap screws [25] and remove the complete rotor [1] from the B-side endshield [42].
  - **EDR..250 – 280, EDRN225 – 280 motors without /ERF or /NS option**
    - Loosen cap screws [15] and remove the flange [7].
    - Push or pull the rotor [1] and take the flange [7] along evenly.
    - Loosen cap screws [19] and remove the B-side endshield [42] together with the rotor [1].
    - Loosen cap screws [25] and remove the B-side endshield [42] from the rotor [1].
  - **EDR..250 – 280, EDRN225 – 280 motors with /ERF or /NS option, or EDR../EDRN315 motors**
    - Loosen cap screws [19] and [25] and remove the B-side endshield [42].

- Loosen cap screws [15] and remove the flange [7] together with the rotor [1]. Push or pull the rotor [1] and take the flange [7] along evenly.
  - Loosen hex head screws [609] and remove the flange [7] from the rotor [1].
  - Before disassembly, preferably protect the oil seal seat from damage using adhesive tape or a protective sleeve.
6. Pull the stator back by approx. 3 to 4 cm.
  7. Visual inspection: Is there any moisture or gear unit oil inside the stator?
    - If not, proceed with step 10.
    - If there is moisture, proceed with step 9.
    - If there is gear oil, have the motor repaired by a specialist workshop.
  8. If there is moisture inside the stator:
    - With gearmotors: Remove the motor from the gear unit
    - With motors without a gear unit: Remove the A-flange
    - Remove the rotor [1]
    - Clean the winding, dry it and check it electrically, see chapter "Drying the electric cylinder" (→ 37).
  9. Remove retaining ring [62]. Preheat the driver [70] and remove it using suitable tools. Remove key [71].
  10. Replace the rolling bearing [11], [44] with permitted rolling bearing types, see chapter "Permitted rolling bearings" (→ 236).  
Push or pull the inner ring of the bearings.
  11. Install key [71] and driver [70]:
    - Preheat the driver to allow for easier installation (joining temperature +85 °C to +115 °C).
    - **EDR..71, EDRN63 – 71 motors:** Clean the driver seat at the rotor [1] before installation. Glue in the driver using Loctite 649. Join the retaining ring [62] flush to the driver. Protect the sealing surface for the oil seal from scratches.
    - **EDR..80 – 315, EDRN80 – 315 motors:** Clean the driver at the rotor [1] and coat with anti-corrosion agent NOCO® fluid before fitting. Next mount the retaining ring [62].
  12. Seal the stator again and install it:
    - **EDR..71 – 132, EDRN63 – 132S motors:** Replace gasket [392]
    - **EDR..160 – 225, EDRN63, EDRN132M – 225 motors:** Replace O-ring [390].
    - **EDR..160 – 315, EDRN132M – 315 motors:** Seal the sealing surfaces with duroplastic sealing compound (operating temperature -40 °C to +180 °C), such as "SEW-L-Spezial".
  13. **EDR..250 – 280, EDRN225 – 280 motors with /ERF or /NS option, or with EDR../EDRN315 motors**
    - Fill the rolling bearing with grease until it is two-thirds full, see chapter "Bearing lubrication" (→ 152).
    - Notice: Place the oil seal flange [608], [21] onto the rotor shaft before installing the bearings.
    - Mount the motor vertically starting on the A-side.
    - Place the springs [105] and lubrication ring [604] into the bearing bore of the flange [7].

- Hang the rotor [1] onto the B-side thread, and guide it into the flange [7].
- Fasten the oil seal flange [608] to the flange [7] using the hex head screws [609].
- Screw in the stator [16] and flange [7] with screws [15].  
Notice: Protect the winding overhang from damage.
- Before mounting the B-side endshield, screw in the M8 set screw (approximately 200 mm) into the oil seal flange [21].
- Before mounting the B-side endshield [42], insert the set screw in through a bore for the screw [25]. Screw B-side endshield to stator [16] using cap screws [19] and hex nuts [17]. Lift the oil seal flange [21] with the set screw, and fasten using 2 screws [25]. Remove the set screw and screw in the remaining screws [25].

#### 14. Reseal the shaft:

- Replace the oil seal [106] on the A-side.
- **EDR..315, EDRN315 motors with /FG option:** Replace the oil seal [250] on the A-side.
- **EDR..250 – 315, EDRN225 – 315 motors with /NS option:** Replace the oil seal [30] on the B-side.
- Apply suitable grease to the sealing lip, see chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).

#### 15. Seal the friction disk of the brake [550] again at the brake endshield [42]:

- **EDRN63 – 71 motors with BE03:** Replace flat gasket [901].
- **EDR..71 – 132, EDRN71 – 132S motors:** Replace the seal [901].
- **EDR..160 – 280, EDRN132M – 280 motors:** Replace O-ring [901] or [1607].
- **EDR..315, EDRN315 motors:** Seal the sealing surface with duroplastic sealing compound (operating temperature -40 °C to +180 °C), such as "SEW-L-Spezial".

#### 16. Reinstall the brake [550]: Insert the brake cable into the terminal box when installing the brake. Install the brake. Observe the alignment of the brake. (Cams at the endshield, manual brake release position).

- **BE03 brake:** The self-tapping screws must be distributed around the brake and tightened evenly to avoid the brake from being tilted.
- **EDRN63 motors with BE03:** Tighten screw [19] M5x35 (self-tapping) with a tightening torque of 5 Nm. The screws can be re-used.
- **EDRN71 motors with BE03:** Tighten screws [900] M5x20 (self-tapping) with a tightening torque of 5 Nm. New screws must be used each time the brake is mounted again.
- **EDR..71 – 80, EDRN71 – 80 motors:** Install cap screws [13]. Tightening torque: 5 Nm
- **EDR..90 – 315, EDRN90 – 315 motors:** Install the cap screws [900].

| EDR..             | 90 – 100 | 112 – 160 | 180       | 200 – 225 | 250 – 315 |
|-------------------|----------|-----------|-----------|-----------|-----------|
| EDRN..            | 90 – 100 | 112 – 132 | 160 – 180 | 200 – 225 | 250 – 315 |
| Tightening torque | 10.3 Nm  | 25.5 Nm   | 50 Nm     | 87.3 Nm   | 230 Nm    |

#### 17. Connect the brake connection cable.

- **BE03 – 11:** Reconnect the brake cable according to the wiring diagram.

- **BE20 – 122:** Plug in the brake plug connector [698] again. Tighten the retaining screws again (tightening torque: 3 Nm)
18. Coat a new sealing ring [95] with a grease suitable for EPP material and fit in the sealing ring seat, see chapter "Order information for lubricants, anti-corrosion agents and sealants" (→  240).
  19. Install the fan [36] and the fan guard [35] or fan guard with encoder mount [212] and the available optional equipment.
  20. With gearmotors: Replace oil flinger [107] and install the pinion.

8.7.5 Basic structure of BE03 brakes

- |                      |                            |                     |

### 8.7.9 Basic structure of BE32, 62, 122 brakes

18234909451

|                            |                           |                           |
|----------------------------|---------------------------|---------------------------|
| [28] Closing cap           | [61] Hex nut              | [69a] Circular spring     |
| [49] Pressure plate        | [63] Pole sheet           | [69b] Circular spring     |
| [50] Brake spring (normal) | [66] Sealing strip        | [276] Brake spring (blue) |
| [52] Brake plate complete  | [67] Setting sleeve       | [702] Friction disk       |
| [54] Magnet body, complete | [68a] Complete brake disk |                           |
| [60] Stud                  | [68b] Complete brake disk |                           |

### 8.7.10 Measuring the wear of BE03 brakes

The working air gap of BE03 brakes cannot be adjusted. Check the stroke of the pressure plate during maintenance.

Replacing individual parts of the brake is not permitted.

✓ The motor and all connected options are disconnected from the power supply.

✓ The motor is protected against unintended restart.

1. Measure the dimension "X" at the stroke of the studs when the brake is released or applied using a depth gauge or slide gauge.

⇒ The difference between both values is the working air gap.

⇒ The maximum permitted working air gap is 0.65 mm. Replace the brake in case this value is exceeded.

23652168459

### 8.7.11 Setting the working air gap of BE05 – BE122 brakes

✓ The motor and all connected options are disconnected from the power supply.

✓ The motor is protected against unintended restart.

1. Disassemble the following parts:

⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).

⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]

2. To move the sealing strip [66], loosen the clamping strap [157].

3. Remove brake abrasion by suction.

4. Measure the brake lining carrier [68].

⇒ For the minimum thickness of the brake lining, see chapter "Technical data" (→ 215).

⇒ If necessary, replace the brake lining carrier, see chapter "Replacing the brake disk of BE05 – BE122 brakes" (→ 201).

5. **BE30 – 122:** To loosen the setting sleeves [67], turn the setting sleeves [67] towards the B-side endshield.

6. Measure the working air gap A with a feeler gauge according to the figure at 3 points offset by 120°.

⇒ **BE05 – 11:** between pressure plate [49] and damping plate [718].

⇒ **BE20 – 122:** between pressure plate [49] and magnet body [54].

27021597944201611

#### 7. Set the working air gap A.

- ⇒ **BE05 – 20:** Tighten the hex nuts [61] until the working air gap is set correctly, see chapter "Braking work, working air gap, and brake lining carrier thickness" (→ 217).
  - ⇒ **BE30 – 122:** Tighten the hex nuts [61] until the working air gap is 0.05 to 0.1 mm smaller than the desired setting value (for default values, see chapter "Braking work, working air gap, and brake lining carrier thickness" (→ 217)).
8. **BE30 – 122:** In order to position the setting sleeves [67] evenly against the friction disk [702], screw the setting sleeves [67] out of the magnet body [54].
- ⇒ Tighten the hex nuts [61] with the following tightening torque. Check the working air gap and adjust it if necessary.

| Brake         | Tightening torque |
|---------------|-------------------|
| BE30 – BE32   | 93 Nm             |
| BE60 – BE62   | 40 Nm             |
| BE120 – BE122 | 230 Nm            |

9. If you are mounting **BE32, BE62, BE122** in a vertical position, set the 3 springs of the brake plate [52] to the following dimension X:

| Brake | Dimension X in mm |
|-------|-------------------|
| BE32  | 7.3               |
| BE62  | 10.0              |
| BE122 | 10.0              |

10. **BE30 – 122:** Screw the setting sleeves [67] to the magnet body until the working air gap is set correctly, see chapter "Technical data" (→ 215).
11. Check the sealing strip [66] for plastic deformation and other damage. If necessary, replace the sealing strip [66]. Mount the clamping strap [157]. Make sure the sealing strip and clamping strap are positioned correctly.
12. Seal the hex nuts [61] with SEW-L-Spezial.
13. Install the disassembled parts of the motor.

### 8.7.12 Replacing the brake disk of BE05 – BE122 brakes

In addition to the brake elements listed in column "BE brake" (see chapter "Inspection and maintenance intervals" (→  149)), check the hex nuts [61] for wear when you replace the brake disk. Always replace the hex nuts [61] when you replace the brake lining carrier.

## INFORMATION

- With EDR..71 – 80, EDRN80 motor with BE05 – 2, the brake cannot be removed from the motor because the /BE brake is directly installed on the brake endshield of the motor.
- 
1. Before starting to perform any work on the motor, disconnect the motor and all mounted options from the power supply before and secure the motor against unintentional power-up.
  2. Remove the following:
    - Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→  154).
    - Fan guard with encoder mount or fan guard [35], retaining ring [32], and fan [36]
  3. Remove the brake cable
    - **BE05 – 11:** Loosen the terminal box cover and unfasten the brake cable from the rectifier.
    - **BE20 – 122:** Loosen locking screws of the brake plug connector [698] and remove plug connector.
  4. Remove the clamping strap [157] and sealing strip [66].
  5. Remove manual brake release if necessary.
    - Adjusting nuts [58], conical springs [57], studs [56], releasing lever [53], conical seat [255], spherical washer [256]
  6. Loosen the hex nuts [61], carefully pull off the magnet body [54] (brake cable!) and remove the brake springs [50]/[276]/[1312].
  7. **BE05 – 11:** Remove the damping plate [718], pressure plate [49] and brake disk [68]  
**BE20, BE30, BE60, BE120:** Remove the pressure plate [49], pole sheet [63] and brake disk [68]  
**BE32, BE62, BE122:** Remove the pressure plate [49], brake disk [68a] and [68b], as well as the brake plate [52].
  8. Clean the brake components.
  9. Install new brake lining carrier(s).
  10. Assemble the brake parts again as described in chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→  191).
    - Use the new hex nuts [61] and clean the contact surfaces of the nuts at the magnet body of any residues of sealing compound.
    - Do so except for the fan [36] and the fan guard [35] because the working air gap has to be set first, see chapter "Setting the working air gap of BE05 – BE122 brakes" (→  198).
    - After having set the working air gap, make sure the areas at sealing strip [66] and hex nuts [61] are correctly sealed.

11. In case of manual brake release: Use the adjusting nuts to adjust the floating clearance "s" between the conical springs (pressed flat) and the adjusting nuts (see chapter "Retrofitting the /HR, /HF manual brake release" (→ 211).

### **⚠ WARNING**

No braking due to incorrectly set floating clearance "s".

Severe or fatal injuries.

- Make sure the floating clearance "s" is correctly set, so that the pressure plate can move up as the brake lining wears.

12. Assemble the remaining parts of the motor you have removed before.

### **INFORMATION**

After replacing the brake disk, the maximum braking torque is reached only after several cycles.

#### **8.7.13 Changing the braking torque of BE05 – BE122 brakes**

You can alter the braking torque in stages. This can be done in various ways:

- By changing the type and number of brake springs.
- By changing the complete magnet body (only possible for BE05 and BE1).
- By changing the brake (for motor size 90 and larger)
- By changing to a double disk brake (only possible for BE30, BE60, BE120)

For possible braking torque steps, refer to chapter "Technical data" (→ 215).

### 8.7.14 Changing the brake spring of BE05 – BE122 brakes

#### ▲ WARNING

Risk of crushing if the drive starts up unintentionally.

Severe or fatal injuries.

- Disconnect the motor and all connected options from the power supply before you start working.
- Secure the motor against unintended power-up.

1. Remove the following:
  - Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
  - Fan guard with encoder mount or fan guard [35], retaining ring [32]/[62], and fan [36]
2. Remove the brake cable.
  - **BE05 – 11:** Remove the terminal box cover. Remove the brake cable from the rectifier.
  - **BE20 – 122:** Loosen the locking screws of the brake plug connector [698]. Remove the plug connector.
3. Remove the clamping strap [157] and sealing strip [66].
4. Remove manual brake release if necessary.
  - Adjusting nuts [58], conical springs [57], studs [56], releasing lever [53], conical seat [255], spherical washer [256]
5. Unfasten the hex nuts [61] and pull off the magnet body [54]
  - By approx. 50 mm (watch the brake cable!)
6. Replace or add brake springs [50/276/1312]
  - Arrange brake springs symmetrically
7. Assemble the brake parts again as described in chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→ 191).
  - Use the new hex nuts [61] and clean the contact surfaces of the nuts at the magnet body of any residues of sealing compound.
  - Do so except for the fan [36] and the fan guard [35] because the working air gap has to be set first, see chapter "Setting the working air gap of BE05 – BE122 brakes" (→ 198).
  - After having set the working air gap, make sure the areas at sealing strip [66] and hex nuts [61] are correctly sealed.
8. In case of manual brake release: Use the adjusting nuts to adjust the floating clearance "s" between the conical springs (pressed flat) and the adjusting nuts (see chapter "Retrofitting the /HR, /HF manual brake release" (→ 211).

#### ▲ WARNING

No braking due to incorrectly set floating clearance "s".

Severe or fatal injuries.

- Make sure the floating clearance "s" is correctly set, so that the pressure plate can move up as the brake lining wears.

9. Assemble the remaining parts of the motor you have removed before.

## INFORMATION

Replace the setting sleeves [58] if the removal procedure is repeated.

### 8.7.15 Changing the magnet body of BE05 – BE122 brakes

#### ⚠ WARNING

Risk of crushing if the drive starts up unintentionally.

Severe or fatal injuries.

- Disconnect the motor and all connected options from the power supply before you start working.
- Secure the motor against unintended power-up.

1. Remove the following:
  - Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
  - Fan guard with encoder mount or fan guard [35], retaining ring [32], and fan [36]
2. Remove the brake cable.
  - **BE05 – 11:** Remove the terminal box cover. Remove the brake cable from the rectifier.
  - **BE20 – 122:** Loosen the locking screws of the brake plug connector [698]. Remove the plug connector.
3. Remove the clamping strap [157] and sealing strip [66].
4. Loosen hex nuts [61], remove complete magnet body [54], remove brake springs [50]/[276]/[1312].
5. Install new magnet body with brake springs. For possible braking torque steps, refer to chapter "Technical data" (→ 215).
6. Mount the parts of the brake again as described in chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→ 191).
  - Use the new hex nuts [61] and clean the contact surfaces of the nuts at the magnet body of any residues of sealing compound.
  - Do so except for the fan [36] and the fan guard [35] because the working air gap has to be set first, see chapter "Setting the working air gap of BE05 – BE122 brakes" (→ 198).
  - After having set the working air gap, make sure the areas at sealing strip [66] and hex nuts [61] are correctly sealed.
7. In case of manual brake release: Use the adjusting nuts to adjust the floating clearance "s" between the conical springs (pressed flat) and the adjusting nuts (see chapter "Retrofitting the /HR, /HF manual brake release" (→ 211).

### **▲ WARNING**

No braking due to incorrectly set floating clearance "s".

Severe or fatal injuries.

- Make sure the floating clearance "s" is correctly set, so that the pressure plate can move up as the brake lining wears.

8. Assemble the remaining parts of the motor you have removed before.
9. Replace the brake control in the event of an interturn short circuit or a short circuit to frame.

### **INFORMATION**

Replace the setting sleeves [58] if the removal procedure is repeated.

#### **8.7.16 Replacing BE03 brakes of EDRN63 – 71 motors**

- ✓ The motor and all connected options are disconnected from the power supply.
  - ✓ The motor is protected against unintended restart.
1. Disassemble the following parts:
    - ⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
    - ⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]
  2. Remove the terminal box cover and loosen the brake cable from the brake control/terminals. Attach trailing wire to brake cables, if necessary.
  3. Remove the screws and brake (with brake endshield if necessary) from the stator.
    - ⇒ EDRN63 motor: Screws [19]
    - ⇒ EDRN71 motor: Screws [900]
  4. Replace the gasket [901]. Observe the alignment of the gasket, if necessary.
  5. If necessary, replace driver [70], key [71], and retaining ring [62], see chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→ 191)
  6. Insert the brake cable of the new brake into the terminal box.
  7. Position the new brake. Make sure the cable outlet and brake lining carrier gearing are correctly aligned.
  8. Fasten the brake using screws [19] or [900]. Distribute the screws around the brake and tighten them one after the other.
    - ⇒ EDRN63 motor: The screws [19] can be reused. Tightening torque 5 Nm, tolerance  $\pm 10\%$
    - ⇒ EDRN71 motor: Use new screws [900]. Tightening torque 5 Nm, tolerance  $\pm 10\%$
  9. Seal the shaft.
  10. Replace the sealing ring [95].
  11. Apply grease to the sealing lip, see chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).

12. **▲ DANGER!** No braking due to incorrectly set floating clearance "s". Severe or fatal injuries. Make sure the floating clearance "s" is set correctly so that the pressure plate can move up as the brake lining wears.  
Manual brake release option: Set the floating clearance "s" using the adjusting nuts, see chapter "Retrofitting the /HR, /HF manual brake release" (→  211).
13. Install the disassembled parts of the motor.

**8.7.17 Replacing BE05 – 2 brakes of EDR..71 – 80, EDRN71 – 80 motors**

- ✓ The motor and all connected options are disconnected from the power supply.
  - ✓ The motor is protected against unintended restart.
1. Disassemble the following parts:
    - ⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
    - ⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]
  2. Remove the terminal box cover and loosen the brake cable from the brake control/terminals. Attach trailing wire to brake cables, if necessary.
  3. Remove the screws and brake (with brake endshield if necessary) from the stator.
    - ⇒ EDR..71 – 80, EDRN71 – 80 motors: Cap screws [13]
  4. Replace gasket [392]. Observe the alignment of the gasket.
  5. If necessary, replace driver [70], key [71], and retaining ring [62], see chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→ 191)
  6. Insert the brake cable of the new brake into the terminal box.
  7. Position the new brake. Make sure the cable outlet and brake lining carrier gearing are correctly aligned.
  8. Refasten the brake using the screws.
    - ⇒ Cap screws [13]
    - ⇒ Tightening torque 5 Nm.
    - ⇒ Tolerance  $\pm 10\%$ .
  9. Seal the sealing ring seat with SEW-L-Spezial. For motors with the /HF or /HR option, additionally install O-rings [47].
  10. Seal the shaft.
  11. Replace the sealing ring [95].
  12. Apply grease to the sealing lip, see chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).
  13. Remove the clamping strap [157] of the old brake. Attach the clamping strip [157] to the sealing strip [66] of the new brake. Make sure that sealing strip and clamping strap are positioned correctly.
  14. **▲ DANGER!** No braking due to incorrectly set floating clearance "s". Severe or fatal injuries. Make sure the floating clearance "s" is set correctly so that the pressure plate can move up as the brake lining wears.  
Manual brake release option: Set the floating clearance "s" using the adjusting nuts, see chapter "Retrofitting the /HR, /HF manual brake release" (→ 211).
  15. Install the disassembled parts of the motor.

**8.7.18 Replacing BE05 – 62 brakes of EDR..90 – 225, EDRN90 – 225 motors**

- ✓ The motor and all connected options are disconnected from the power supply.
- ✓ The motor is protected against unintended restart.
- 1. Disassemble the following parts:
  - ⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
  - ⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]
- 2. Loosen the brake cable.
  - ⇒ BE05 – 11: Remove the terminal box cover and loosen the brake cable from the brake control/terminals.
  - ⇒ BE20 – 62: Loosen locking screws of the brake plug connector [698] and remove plug connector.
- 3. Remove the screws and brake (with brake endshield if necessary) from the stator.
- 4. Replace the gasket [901]. Observe the alignment of the gasket, if necessary.
- 5. If necessary, replace driver [70], key [71], and retaining ring [62], see chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→ 191)
- 6. BE05 – 11: Insert the brake cable of the new brake into the terminal box.
- 7. Position the new brake. Make sure the cable outlet and brake lining carrier gearing are correctly aligned.
  - ⇒ BE20 – 62 with manual brake release option: It is important that the manual brake release is positioned properly.
- 8. Refasten the brake using the screws.
  - ⇒ Cap screws [900]
  - ⇒ Tightening torque EDR..90 – 100, EDRN90 – 100: 10.3 Nm
  - ⇒ Tightening torque EDR..112 – 160, EDRN112 – 132: 25.5 Nm
  - ⇒ Tightening torque EDR..180, EDRN160 – 180: 50 Nm
  - ⇒ Tightening torque EDR..200 – 225, EDRN200 – 225: 87.3 Nm
  - ⇒ Tolerance  $\pm 10\%$ .
- 9. Seal the sealing ring seat with SEW-L-Spezial. For motors with the /HF or /HR option, additionally install O-rings [47].
- 10. Seal the shaft.
- 11. Replace the sealing ring [95].
- 12. Apply grease to the sealing lip, see chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).
- 13. BE20 – 62: Insert the plug connector [698] into the brake and fasten using screws.
  - ⇒ Tightening torque 3 Nm
- 14. Remove the clamping strap [157] of the old brake. Attach the clamping strip [157] to the sealing strip [66] of the new brake. Make sure that sealing strip and clamping strap are positioned correctly.

15. **▲ DANGER!** No braking due to incorrectly set floating clearance "s". Severe or fatal injuries. Make sure the floating clearance "s" is set correctly so that the pressure plate can move up as the brake lining wears.  
Manual brake release option: Set the floating clearance "s" using the adjusting nuts, see chapter "Retrofitting the /HR, /HF manual brake release" (→  211).
16. Install the disassembled parts of the motor.

### 8.7.19 Replacing BE60 – 122 brakes of EDR..250 – 315, EDRN250 – 315 motors

- ✓ The motor and all connected options are disconnected from the power supply.
- ✓ The motor is protected against unintended restart.
- 1. Disassemble the following parts:
  - ⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
  - ⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]
- 2. Unscrew the locking screws of the brake plug connector [698] and remove the plug connector.
- 3. Remove the screws and brake (with brake endshield if necessary) from the stator.
  - ⇒ EDR..250 – 280, EDRN250 – 280 motors: Replace the O ring [1607].
- 4. If necessary, replace driver [70], key [71], and retaining ring [62], see chapter "Inspection steps for EDR..71 – 315, EDRN63 – 315 brakemotors" (→ 191)
- 5. Seal the shaft.
- 6. Replace the sealing ring [95].
- 7. Apply grease to the sealing lip, see chapter "Order information for lubricants, anti-corrosion agents and sealants" (→ 240).
- 8. Position the new brake. Make sure the cable outlet and brake lining carrier gearing are correctly aligned.
  - ⇒ Manual brake release option: It is important that the manual brake release is positioned properly.
- 9. Refasten the brake using the screws.
  - ⇒ Cap screws [900]
  - ⇒ Tightening torque: 230 Nm
  - ⇒ Tolerance  $\pm 10\%$ .
- 10. Insert plug connector [698] in the brake and fasten using screws.
  - ⇒ Tightening torque 3 Nm
- 11. Remove the clamping strap [157] of the old brake. Attach the clamping strip [157] to the sealing strip [66] of the new brake. Make sure that sealing strip and clamping strap are positioned correctly.
- 12. **▲ DANGER!** No braking due to incorrectly set floating clearance "s". Severe or fatal injuries. Make sure the floating clearance "s" is set correctly so that the pressure plate can move up as the brake lining wears.  
Manual brake release option: Set the floating clearance "s" using the adjusting nuts, see chapter "Retrofitting the /HR, /HF manual brake release" (→ 211).
- 13. Install the disassembled parts of the motor.

### 8.7.20 Retrofitting the /HR, /HF manual brake release

- ✓ The motor and all connected options are disconnected from the power supply.
  - ✓ The motor is protected against unintended restart.
1. Disassemble the following parts:
    - ⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
    - ⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]
  2. Mount the manual brake release.
    - ⇒ BE03: Position the releasing lever [53] and the spring plate [53] correctly. Mount the flange nut [58]. Attach the hand lever [51]/set screw [64] to the stator using the grommets.
    - ⇒ BE05 – BE11: Remove the old sealing ring [95]. Screw in the studs [56] and glue them. Insert the sealing rings for the manual brake release [95]. Hammer in the parallel pin [59]. Install the releasing lever [53], the conical springs [57] and the adjusting nuts [58].
    - ⇒ BE20 – BE62: Insert O-rings [47] into the magnet body. Screw in the studs [56] and glue them. Install the releasing lever [53], the conical springs [57] and the adjusting nuts [58].
    - ⇒ BE120 – BE122: Insert O-rings [47] in the magnet body. Screw in the studs [56] and glue them.
  3. **▲ DANGER!** No braking due to incorrectly set floating clearance "s". Severe or fatal injuries. Make sure the floating clearance "s" is set correctly so that the pressure plate can move up as the brake lining wears. Set the floating clearance "s" using the adjusting nuts or flange nuts.
    - ⇒ BE03: Between releasing lever and flange nut (see following illustration).
    - ⇒ BE05 – 122: Between conical springs (pressed flat) and adjusting nuts (see following illustration).

| BE03                                                                                | BE05 – 122                                                                            |

## 8.8.2 Basic structure of EDR..90 – 315, EDRN63, EDRN90 – 315 motors with backstop

18014399652338315

|      |                                           |        |                                                    |
|------|-------------------------------------------|--------|----------------------------------------------------|
| [1]  | Motor                                     | [74]   | Backstop                                           |
| [30] | Sealing ring (EDR../EDRN250 – 315 motors) | [78]   | Information sign for direction of rotation         |
| [35] | Fan guard                                 | [702]  | Backstop housing                                   |
| [36] | Fan wheel                                 | [703]  | Cap screw                                          |
| [37] | Sealing ring                              | [376]  | Screw plug (EDR..160 – 315, EDRN132M – 315 motors) |
| [42] | Brake endshield                           | [390]  | O-ring (EDR..160 – 225, EDRN132M – 225 motors)     |
| [48] | Spacing ring                              | [392]  | Seal (EDR..90 – 132, EDRN90 – 132S motors)         |
| [55] | Closing piece                             | [901]  | Seal (EDR../EDRN90 – 225 motors)                   |
| [62] | Retaining ring                            | [1406] | Spacing ring (EDR../EDRN250 – 315 motors)          |
| [71] | Key                                       | [1607] | O-ring (EDR../EDRN250 – 280 motors)                |

### 8.8.3 Changing the blocking direction

Proceed as follows to change the blocking direction:

- ✓ The motor and all connected options are disconnected from the power supply.
  - ✓ The motor is protected against unintended restart.
1. Disassemble the following parts:
    - ⇒ Forced cooling fan and rotary encoder, if installed, see chapter "Motor and brake maintenance – preliminary work" (→ 154).
    - ⇒ Fan guard with encoder mount [212] or fan guard [35], retaining ring [32]/[62] and fan [36]
    - ⇒ **EDR..71 – 80, EDRN71 – 80 motors:** Sealing flange [75].
    - ⇒ **EDR..90 – 315, EDRN63, 90 – 315 motors:** Backstop housing, complete [702].
  2. Remove the retaining ring [62] and, if necessary, the spacing ring [1406].
  3. Dismount the backstop [74] using a puller.
  4. To alter the blocking direction, turn around the backstop [74].
  5. Check the old grease. If necessary, replace the grease as specified below.
    - ⇒ **EDRN63 – 71 motors:** Glue in the backstop [74] with Loctite 648/649.
    - ⇒ **EDR..71 – 315, EDRN80 – 315 motors:** Press on the backstop [74].
  6. Mount the retaining ring [62].
  7. Mount the following parts:
    - ⇒ **EDR..71 – 80, EDRN71 – 80 motors:** Apply SEW-L-Spezial sealant to the sealing flange [75]. Mount the sealing flange [75].
    - ⇒ **EDR..90 – 315, EDRN63, 90 – 315 motors:** Replace the seals [901], [1607], and if necessary [37]. Mount the complete backstop housing [702].
  8. Install the disassembled parts of the motor.
  9. Replace the label [78] indicating the direction of rotation.

### Lubricating the backstop

The backstop is greased at the factory with the corrosion protection low-viscosity grease LBZ 1. If you want to use another grease, make sure it complies with NLGI class 00/000 with a base oil viscosity of 42 mm<sup>2</sup>/s at 40 °C on a lithium saponified and mineral oil base. The application temperature range is from -50 °C to +90 °C. See the following table for the amount of grease required:

| EDR..                 | 71    | 80 | 90/100 | 112/132  | 160    | 180     | 200/225 | 250/280 | 315 |
|-----------------------|-------|----|--------|----------|--------|---------|---------|---------|-----|
| EDRN..                | 63/71 | 80 | 90/100 | 112/132S | 132M/L | 160/180 | 200/225 | 250/280 | 315 |
| Amount of grease in g | 9     | 11 | 15     | 20       | 30     | 45      | 80      | 80      | 120 |

The tolerance regarding the grease level is ± 30%.

## 9 Technical data

### 9.1 Braking torques

The following table shows the possible braking torque combinations for various sizes of the BE05 – 122 brake. For BE03 brakes, the braking torques of each brake are pre-set at the factory and cannot be adjusted.

#### ⚠ WARNING

Insufficient or excessive braking torque due to impermissible spring pack.

Severe or fatal injuries.

- Maintenance work may only be performed by a trained specialist.
- In case of a conversion, make sure the selected spring set generates nominal braking torques that are permitted for your drive combination and are suitable for the application.
- Observe the project planning note in the manual "Project Planning for BE.. Brakes – DR.., DRN.., DR2.., EDR.., EDRN.. AC Motors – Standard Brake/Safety Brake", or contact SEW-EURODRIVE.

| 6 springs                                                                           | 4 + 2 springs                                                                       | 3 + 3 springs                                                                       | 4 springs                                                                            | 3 springs                                                                             |                                                                                       |
|  |  |  |  |  |                                                                                       |
| BE30 – 122:                                                                         |                                                                                     |                                                                                     |                                                                                      |                                                                                       |                                                                                       |
| 8 springs                                                                           | 4 + 4 springs                                                                       | 6 + 2 springs                                                                       | 6 springs                                                                            | 4 springs                                                                             |                                                                                       |
|  |  |  |  |  |                                                                                       |

## 9.2 Braking work, working air gap, and brake lining carrier thickness

If the brake is used in combination with a safety encoder, or if the brake is designed as safety brake, the maximum values for the working air gap and for the braking work until maintenance are reduced. For the new values, refer to the addendum to the operating instructions for safety brakes and safety encoders.

| Brake | Braking work until maintenance <sup>1)</sup> | Working air gap    |         | Brake lining carrier |
|-------|----------------------------------------------|--------------------|---------|----------------------|
|       |                                              | min. <sup>2)</sup> | Maximum | Minimum              |
|       | 10 <sup>6</sup> J                            | mm                 | mm      | mm                   |
| BE03  | 200                                          | 0.25               | 0.65    | — <sup>3)</sup>      |
| BE05  | 120                                          | 0.25               | 0.6     | 11.0                 |
| BE1   | 120                                          | 0.25               | 0.6     | 11.0                 |
| BE2   | 180                                          | 0.25               | 0.6     | 11.0                 |
| BE5   | 390                                          | 0.25               | 0.9     | 11.0                 |
| BE11  | 640                                          | 0.3                | 1.2     | 12.5                 |
| BE20  | 1000                                         | 0.3                | 1.2     | 12.5                 |
| BE30  | 1500                                         | 0.3                | 1.2     | 12.5                 |
| BE32  | 1500                                         | 0.4                | 1.2     | 12.5                 |
| BE60  | 2500                                         | 0.3                | 1.2     | 14.0                 |
| BE62  | 2500                                         | 0.4                | 1.2     | 14.0                 |
| BE120 | 390                                          | 0.6                | 1.2     | 14.0                 |
| BE122 | 390                                          | 0.8                | 1.2     | 14.0                 |

1) The specified values are nominal values that were determined during rating operation. The actual braking work that can be reached before maintenance may vary depending on the actual load during operation.

2) When checking the working air gap, note: After a test run, parallelism tolerances on the brake lining carrier may give rise to deviations of ±0.15 mm.

3) The brake lining carrier cannot be replaced. When the minimum brake lining carrier thickness/maximum working air gap is reached, the brake must be replaced.

### INFORMATION

In case of drives with BE32, BE62, or BE122 brake in pivoted mounting position, the specified value may be reduced by up to 50%, depending on the pivoting angle.

### 9.3 Operating currents

#### 9.3.1 General information on determining operating currents

The tables in this chapter list the operating currents of BE.. brakes at different voltages.

The acceleration current  $I_B$  (= inrush current) flows only for a short time (approx. 160 ms for BE03 – BE62, 400 ms for BE60 – BE122 with BMP3.1 brake control) when the brake is released. No increased inrush current occurs when using BG.., BS24 or BMS.. brake control and direct DC voltage supply without control unit (only possible with brake size BE03 – BE2).

The values for the holding currents  $I_H$  are rms values. Only use current measurement units that are designed to measure rms values.

#### INFORMATION

The following operating currents and power consumption values are nominal values. They refer to a coil temperature of +20 °C.

Operating currents and power consumption usually decrease during normal operation due to heating of the brake coil.

Note that the actual operating currents can be higher by up to 25% depending on the ambient temperature and with coil temperatures below +20 °C.

#### 9.3.2 Legend

The following tables list the operating currents of the brakes at different voltages.

The following values are specified:

|              |                                                                                                                             |
|--------------|-----------------------------------------------------------------------------------------------------------------------------|
| $P_B$        | Nominal value of the electric power consumption in the brake coil in watt.                                                  |
| $U_N$        | Nominal voltage (rated voltage range) of the brake in V (AC or DC).                                                         |
| $I_H$        | Nominal holding current in A (AC). rms value of the braking current in the supply cable to the SEW-EURODRIVE brake control. |
| $I_{DC}$     | Nominal holding current in A (DC) in the brake cable with direct DC voltage supply                                          |
|              | or                                                                                                                          |
|              | Nominal holding current in A (DC) in the brake cable with DC 24 V supply via BS24, BSG, or BMV.                             |
| $I_B$        | Acceleration current in ampere (AC or DC) when operated with SEW brake control for high-speed excitation.                   |
| $I_B/I_H$    | Inrush current ratio ESV.                                                                                                   |
| $I_B/I_{DC}$ | Inrush current ratio ESV for DC 24 V supply with BSG or BMV.                                                                |

### 9.3.3 BE03, BE05, BE1, BE2 brakes

|                               | BE03 | BE05/BE1 | BE2 |
|-------------------------------|------|----------|-----|
| Nominal power brake coil in W | 19.5 | 25       | 34  |
| Inrush current ratio ESV      | 4    | 4        | 4   |

| Nominal voltage (rated voltage range) V <sub>N</sub> |                  | BE03           |                 | BE05, BE1      |                 | BE2            |                 |
|------------------------------------------------------|------------------|----------------|-----------------|----------------|-----------------|----------------|-----------------|

## 9.4 Resistors

The depicted values apply to the standard temperature range of -20 to +40 °C. Deviating resistances may occur in other temperature ranges, especially in case of drives with permitted temperature above +60 °C, or in case of non-ventilated drives, due to modified winding configurations. The values are available from SEW-EURODRIVE on request.

### 9.4.1 Resistance measurement BE03 – BE122

#### INFORMATION

The colored cores of the brake coil must be removed from their terminals for the resistance measurement; otherwise, this could lead to incorrect measurement results.

For drives in design 3G-c, 3GD-c, the brake controller must always be installed in the control cabinet.

#### Brake control system in the control cabinet

The following figure shows the brake coil resistance measurement at the auxiliary terminal strip in the terminal box when the brake controller is installed in the control cabinet:

$R_B$  Accelerator coil resistance at 20 °C in  $\Omega$   
 $R_T$  Coil section resistance at 20 °C in  $\Omega$

RD Red  
 WH White  
 BU Blue

#### Brake controller in the terminal box

The following figure shows the resistance measurement when the brake controller is installed in the terminal box (cut-off in the AC circuit):

9007199497350795

The following figure shows the resistance measurement when the brake controller is installed in the terminal box (cut-off in the DC and AC circuit):

18014398752093451

$R_B$  Accelerator coil resistance at 20 °C in  $\Omega$   
 $R_T$  Coil section resistance at 20 °C in  $\Omega$

RD Red  
WH White  
BU Blue

## 9.4.2 BE03, BE05, BE1, BE2, BE5 brakes

| 184 (174-193)                                        | 80   | 78.1           | 241            | 62             | 187            | 45.5           | 139            | 27.5           | 132            |
| 208 (194-217)                                        | 90   | 96             | 296            | 78             | 235            | 58             | 174            | 34.5           | 166            |
| 230 (218-243)                                        | 96   | 119            | 367            | 98             | 295            | 72             | 220            | 43.5           | 210            |
| 254 (244-273)                                        | 110  | 150            | 462            | 124            | 375            | 91             | 275            | 55             | 265            |
| 290 (274-306)                                        | 125  | 191            | 589            | 156            | 470            | 115            | 350            | 69             | 330            |
| 330 (307-343)                                        | 140  | 247            | 762            | 196            | 590            | 144            | 440            | 87             | 420            |
| 360 (344-379)                                        | 160  | 326            | 1004           | 245            | 750            | 182            | 550            | 110            | 530            |
| 400 (380-431)                                        | 180  | 412            | 1270           | 310            | 940            | 230            | 690            | 138            | 660            |
| 460 (432-484)                                        | 200  | 512            | 1580           | 390            | 1180           | 280            | 860            | 174            | 830            |
| 500 (485-542)                                        | 220  | 645            | 1989           | 490            | 1490           | 355            | 1080           | 220            | 1050           |

### 9.4.3 Resistance measurement BE120, BE122

The following illustration shows how to measure resistance with BMP 3.1.

BS Accelerator coil  
TS Coil section  
 $R_B$  Accelerator coil resistance at 20 °C in  $\Omega$   
 $R_T$  Coil section resistance at 20 °C in  $\Omega$   
 $V_N$  Nominal voltage (rated voltage range)

RD Red  
WH White  
BU Blue

### INFORMATION

When measuring the resistance of the coil section ( $R_T$ ) or the acceleration coil ( $R_B$ ), remove the white conductor from the brake rectifier; if it remains connected, the internal resistance of the brake rectifier will cause erroneous results.

## 9.4.4 Brakes BE11, BE20, BE30, BE32, BE60, BE62

|                               | BE11 | BE20 | BE30, BE32 | BE60, BE62 |
|-------------------------------|------|------|------------|------------|
| Nominal power brake coil in W | 61   | 79   | 96         | 155        |
| Inrush current ratio ESV      | 6.7  | 7.7  | 8.5        | 9.2        |

| Nominal voltage (rated voltage range) $V_N$ | BE11  |       | BE20  |       | BE30, BE32 |       | BE60, BE62 |       |
|---------------------------------------------|-------|-------|-------|-------|------------|-------|------------|-------|
| AC V                                        | $R_B$ | $R_T$ | $R_B$ | $R_T$ | $R_B$      | $R_T$ | $R_B$      | $R_T$ |
| 60 (57-63)                                  | 1.54  | 8.7   | 1.06  | 7.2   | –          | –     | –          | –     |
| 120 (111-123)                               | 6.2   | 34.5  | 4.25  | 28.5  | 2.9        | 21.5  | –          | –     |

| 230 (218-243)                                        | 97             | 47             |
| 254 (244-273)                                        | 12.2           | 59             |
| 290 (274-306)                                        | 15.4           | 74             |
| 330 (307-343)                                        | 19.4           | 93             |
| 360 (344-379)                                        | 24.5           | 118            |
| 400 (380-431)                                        | 30.5           | 148            |
| 460 (432-484)                                        | 38.5           | 187            |
| 500 (485-542)                                        | 48.5           | 235            |

## 9.5 Brake control

### INFORMATION

For EDR../EDRN.. motors in design 3G-c and 3GD-c, brake controllers are not permitted in the wiring space.

For EDR../EDRN.. motors in design 3D-c, brake controllers can be installed in the wiring space of the motor and in the control cabinet.

#### 9.5.1 Installation in a control cabinet

The table below shows the standard and optional combinations of brakes and brake rectifiers for installation in control cabinets:

|       | BE03 | BE05 | BE1 | BE2 | BE5 | BE11 | BE20 | BE30,<br>BE32 | BE60,<br>BE62 | BE120,<br>BE122 |
|-------|------|------|-----|-----|-----|------|------|---------------|---------------|-----------------|
| BMS.. | x    | x    | x   | x   | –   | –    | –    | –             | –             | –               |
| BME.. | •    | •    | •   | •   | x   | x    | x    | x             | x             | –               |
| BMH.. | •    | •    | •   | •   | •   | •    | •    | •             | –             | –               |
| BMP.. | •    | •    | •   | •   | •   | •    | •    | •             | –             | x               |
| BMK.. | •    | •    | •   | •   | •   | •    | •    | •             | –             | –               |
| BMV.. | •    | x    | x   | x   | x   | x    | x    | –             | –             | –               |

- Can be selected
- x Standard for design 3G-c, 3D-c, 3GD-c
- Not permitted

#### Control cabinet

The following tables list the technical data of brake control systems for installation in the control cabinet. The different housings have different colors (= color code) to make them easier to distinguish.

##### BMS..

Half-wave rectifier without electronic switching.

| Type   | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code     |
|--------|-----------------|---------------------------------|-------------|----------------|
| BMS1.5 | AC 150 – 500 V  | DC 1.5 A                        | 08258023    | Tar black      |
| BMS3   | AC 42 – 150 V   | DC 3.0 A                        | 08258031    | Mahogany brown |

##### BME..

Half-wave rectifier with electronic switching.

| Type   | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|--------|-----------------|---------------------------------|-------------|------------|
| BME1.5 | AC 150 – 500 V  | DC 1.5 A                        | 08257221    | Vermilion  |

| Type | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|------|-----------------|---------------------------------|-------------|------------|
| BME3 | AC 42 – 150 V   | DC 3.0 A                        | 0825723X    | Light blue |

#### BMH..

Half-wave rectifier with electronic switching and heating function

| Type   | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code   |
|--------|-----------------|---------------------------------|-------------|--------------|
| BMH1.5 | AC 150 – 500 V  | DC 1.5 A                        | 0825818X    | Signal green |
| BMH3   | AC 42 – 150 V   | DC 3.0 A                        | 08258198    | Zinc yellow  |

#### BMP..

Half-wave rectifier with electronic switching and integrated voltage relay for cut-off in the DC circuit.

| Type   | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code  |
|--------|-----------------|---------------------------------|-------------|-------------|
| BMP1.5 | AC 150 – 500 V  | DC 1.5 A                        | 08256853    | Light gray  |
| BMP3   | AC 42 – 150 V   | DC 3.0 A                        | 08265666    | Light green |
| BMP3.1 | AC 230 – 575 V  | DC 2.8 A                        | 08295077    | –           |

#### BMK..

Half-wave rectifier with electronic switching, DC 24 V control input, and cut-off in the DC circuit.

| Type   | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|--------|-----------------|---------------------------------|-------------|------------|
| BMK1.5 | AC 150 – 500 V  | DC 1.5 A                        | 08264635    | Water blue |
| BMK3   | AC 42 – 150 V   | DC 3.0 A                        | 08265674    | Light pink |

#### BMV..

Brake control unit with electronic switching, DC 24 V control input and fast cut-off.

| Type | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|------|-----------------|---------------------------------|-------------|------------|
| BMV5 | DC 24 V         | DC 5.0 A                        | 13000063    | Pure white |

### 9.5.2 Installation in the motor terminal box

The table below shows the standard and optional combinations of brakes and brake rectifiers for installation in the wiring space of the motor:

|       | BE03 with EDRN63 | BE03 | BE05 | BE1 | BE2 | BE5 |
|-------|------------------|------|------|-----|-----|-----|
| BG..  | x                | x    | x    | x   | x   | —   |
| BGE.. | -                | •    | •    | •   | •   | x   |
| BS..  | -                | x    | x    | x   | x   | —   |
| BSG.. | -                | •    | •    | •   | •   | x   |

|       | BE11 | BE20 | BE30, BE32 | BE60, BE62 | BE120, BE122 |
|-------|------|------|------------|------------|--------------|

#### Motor terminal box

The following table shows the technical data of the brake controls for installation in the terminal box. The different housings have different colors (= color code) to make them easier to distinguish.

#### BG..

Half-wave rectifier without electronic switching.

| Type  | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code     |
|-------|-----------------|---------------------------------|-------------|----------------|
| BG1.2 | AC 90 – 500 V   | DC 1.2 A                        | 08269920    | Jet black      |
| BG2.4 | AC 24 – 90 V    | DC 2.4 A                        | 08270198    | Mahogany brown |
| BG1.5 | AC 150 – 500 V  | DC 1.5 A                        | 08253846    | Jet black      |
| BG3   | AC 24 – 500 V   | DC 2.8 A                        | 08253862    | Mahogany brown |

#### BGE..

Half-wave rectifier with electronic switching.

| Type   | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|--------|-----------------|---------------------------------|-------------|------------|
| BGE1.5 | AC 150 – 500 V  | DC 1.5 A                        | 08253854    | Vermilion  |
| BGE3   | AC 42 – 150 V   | DC 2.8 A                        | 08253870    | Light blue |

## BS24

Varistor overvoltage protection.

| Type | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|------|-----------------|---------------------------------|-------------|------------|
| BS24 | DC 24 V         | DC 5.0 A                        | 08267634    | Water blue |

## BSG..

Electronic switching.

| Type | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|------|-----------------|---------------------------------|-------------|------------|
| BSG  | DC 24 V         | DC 5.0 A                        | 08254591    | Pure white |

## BMP..

Half-wave rectifier with electronic switching and integrated voltage relay for cut-off in the DC circuit.

| Type                 | Nominal voltage | Nominal output current<br>$I_L$ | Part number | Color code |
|----------------------|-----------------|---------------------------------|-------------|------------|
| BMP3.1 <sup>1)</sup> | AC 230 – 575 V  | DC 2.8 A                        | 08295077    | —          |

1) Only sizes 250 – 315

## Installation in motor terminal box with additional switching relay BSR, BUR

The following tables show the technical data of the BSR.. and BUR.. brake controls, each with BGE.. brake control and SR.R current relay or UR.E voltage relay. The relays are used for the cut-off in the AC and DC circuits without additional switching contacts in the control cabinet.

The BSR.. brake control picks off the supply voltage for the brake directly from the motor terminal board. This is the reason why it may only be used with drives operated on the supply system (constant voltage). BUR brake control can also be used with variable speed drives (frequency inverter operation).

### BSR brake control

#### Assignment

SR.E is assigned according to the nominal motor current in  $\Delta$  connection:

The following table shows the allocation of the SR.. current relay to the nominal motor current  $I_N$  in  $\Delta$  connection and the maximum holding current of the brake  $I_{Hmax}$ .

$$I_{Hmax} = I_H \times 1.3 A_{Ac}$$

EDR..71 – 132,  
EDRN63– 132S

| Current relay | Nominal motor current $I_N$<br>in $\Delta$ connection | Max. holding current of the<br>brake $I_{Hmax}$ |
|---------------|-------------------------------------------------------|-------------------------------------------------|
|               | A                                                     | A                                               |
| SR10E         | 0.075 – 0.6                                           | 1                                               |

EDR..160 – 225,  
EDRN132M – 225

| Current relay | Nominal motor current $I_N$<br>in $\Delta$ connection | Max. holding current of the<br>brake $I_{Hmax}$ |
|---------------|-------------------------------------------------------|-------------------------------------------------|
|               | A                                                     | A                                               |
| SR11E         | 0.6 – 10                                              | 1                                               |
| SR15E         | 10 – 50                                               | 1                                               |

*BUR.. brake control**Assignment*

The BUR.. brake control combines the BGE.. control unit with an electronic voltage relay. The BGE.. control unit has a separate voltage supply because the voltage at the motor terminal board is not constant (motor operated on frequency inverter).

With a cut-off in the AC circuit, the UR.E voltage relay triggers a cut-off in the DC circuit of the brake coil almost instantaneously and the brake is applied extremely fast.

The brake voltage is defined automatically on the basis of the motor phase voltage without further customer data. Optionally, other brake voltages can be defined in accordance with the following table.

| Brake | BUR.. (BGE.. + UR.E) for brake control in AC V |           |           |           |           |           |           |           |           |           |           |           |
|-------|------------------------------------------------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|-----------|
|       | 79 – 123                                       | 124 – 138 | 139 – 193 | 194 – 217 | 218 – 243 | 244 – 273 | 274 – 306 | 307 – 343 | 344 – 379 | 380 – 431 | 432 – 484 | 485 – 542 |
| BE03  |                                                |           |           |           |           |           |           |           |           |           |           |           |
| BE05  |                                                |           |           |           |           |           |           |           |           |           |           |           |

### 9.5.3 Parallel operation of several brakes with one controller

For EDR../EDRN.. motors, parallel voltage supply of two or more brakes via a single brake controller is not permitted due to the stricter requirements of explosion protection. This means a separate brake controller must be used for each brake.

## 9.6 Permitted rolling bearings

### 9.6.1 Rolling bearing types for EDR..71 – 280 motors

| Motors         | A-side bearing |            | B-side bearing |             |
|----------------|----------------|------------|----------------|-------------|
|                | AC motor       | Gearmotor  | AC motor       | Brakemotor  |
| EDR..71        | 6204-2Z-C3     | 6303-2Z-C3 | 6203-2Z-C3     | 6203-2RS-C3 |
| EDR..80        | 6205-2Z-C3     | 6304-2Z-C3 | 6304-2Z-C3     | 6304-2RS-C3 |
| EDR..90 – 100  | 6306-2Z-C3     |            | 6205-2Z-C3     | 6205-2RS-C3 |
| EDR..112 – 132 | 6308-2Z-C3     |            | 6207-2Z-C3     | 6207-2RS-C3 |
| EDR..160       | 6309-2Z-C3     |            | 6209-2Z-C3     | 6209-2RS-C3 |
| EDR..180       | 6312-2Z-C3     |            | 6213-2Z-C3     | 6213-2RS-C3 |
| EDR..200 – 225 | 6314-2Z-C3     |            | 6314-2Z-C3     | 6314-2RS-C3 |
| EDR..250 – 280 | 6317-2Z-C4     |            | 6315-2Z-C3     | 6315-2RS-C3 |

### 9.6.2 Rolling bearing types for EDRN63 – 280 motors

| Motors        | A-side bearing |            | B-side bearing |             |
|---------------|----------------|------------|----------------|-------------|

## 9.7 Lubricant tables

### 9.7.1 Lubricant table for rolling bearings

#### INFORMATION

Use of wrong bearing grease can damage the bearings.

#### Motors with sealed bearings

The bearings are 2Z or 2RS closed bearings and cannot be re-lubricated. They are used for EDR..71 – 280, EDRN63 – 280 motors.

|                        | Ambient temperature | Manufacturer | Type                              | DIN designation |
|------------------------|---------------------|--------------|-----------------------------------|-----------------|
| Motor rolling bearings | -20 °C to +80 °C    | Mobil        | Polyrex EM <sup>1)</sup>          | K2P-20          |
|                        | +20 °C to +100 °C   | Klüber       | Klüberquiet BQ72-72 <sup>2)</sup> | KX2U            |
|                        | -40 °C to +60 °C    | Kyodo Yushi  | Multemp SRL <sup>2)</sup>         | KE2N-40         |
|                        | -20 °C to +60 °C    | SKF          | LHT23 <sup>2)</sup>               | KE2N-40         |

1) Mineral lubricant (= mineral-based bearing grease)

2) Synthetic lubricant (= synthetic-based bearing grease)

#### Motors with open bearings

Motors in size EDR..315 and EDRN315 always have open bearings. If EDR..250 – 280 and EDRN225 – 280 motors have the relubrication option /NS, these sizes also have open bearings.

|                 | Ambient temperature | Manufacturer | Type                     | DIN designation |
|-----------------|---------------------|--------------|--------------------------|-----------------|
| Rolling bearing | -20 °C to +80 °C    | Mobil        | Polyrex EM <sup>1)</sup> | K2P-20          |
|                 | -40 °C to +60 °C    | SKF          | LGHP 2 <sup>1)</sup>     | K2N-40          |

1) Mineral lubricant (= mineral-based bearing grease)

### 9.8 Order information for lubricants, anti-corrosion agents and sealants

Lubricants, anti-corrosion agents, and sealants can be obtained directly from SEW-EURODRIVE using the following order numbers.

| Usage                              | Manufacturer    | Type                   | Quantity | Purchase order number |
|------------------------------------|-----------------|------------------------|----------|-----------------------|
| Lubricant for rolling bearings     | Mobil           | Polyrex EM             | 400 g    | 09101470              |
|                                    | SKF             | LGHP2                  | 400 g    | 09101276              |
| Lubricant for sealing rings        |                 |                        |          |                       |
| Material: NBR/FKM                  | Klüber          | Petamo GHY 133N        | 10 g     | 04963458              |
|                                    | FUCHS LUBRITECH | Gleitmo 100 S          | 1 kg     | 03258092              |
| Material: EPDM/EPP                 | Klüber          | Klübersynth BLR 46-122 | 10 g     | 03252663              |
| Corrosion protection and lubricant | SEW-EURODRIVE   | NOCO® fluid            | 5.5 g    | 09107819              |
| Sealant                            | Marston Domsel  | SEW-L-Spezial          | 80 g     | 09112286              |

1) see figure "Sin/cos signals and phase relationship"

2) see figure "HTL/TTL signals and phase relationship"

3) Due to the stiffness of the torque bracket, you have to take into account an automatically resetting  $\pm 0.6^{\circ}$  twist (depending on the direction of rotation) of the encoder housing compared to the encoder shaft.

4) Sin/cos encoders have a self-diagnostics function. If an error is detected, the sensor reports it by deactivating the output signals to the encoder evaluation unit.

9.9.2 ES7., AS7., EG7., AG7. encoders

This table shows the general technical data for the encoders:

| Designation                        | Value                              |
|------------------------------------|------------------------------------|
| Operating temperature of the motor | -30 °C to +60 °C <sup>1)</sup>     |
| Storage temperature                | -15 °C to +70 °C                   |
| Maximum angular acceleration       | 10 <sup>4</sup> rad/s <sup>2</sup> |

1) Observe the restrictions of the motors, e.g. at operating temperatures of >40 °C or at maximum speed.

1) Due to the stiffness of the torque bracket, you have to take into account an automatically resetting ±0.6° twist (depending of the direction of rotation) of the encoder housing compared to the encoder shaft.

2) Sin/cos encoders have a self-diagnostics function. If an error is detected, the sensor reports it by deactivating the output signals to the encoder evaluation unit.

1) See figure "Sin/cos signals and phase relationship".

2) Observe the specification for the HIPERFACE® interface, Sick AG.

3) Due to the stiffness of the torque bracket, you have to take into account an automatically resetting  $\pm 0.6^\circ$  twist (depending of the direction of rotation) of the encoder housing compared to the encoder shaft.

4) Absolute encoders A.8. and AG7Y have a self-diagnostics function. If an error is detected, the sensor reports it by deactivating the output signals to the encoder evaluation unit.

1) Due to the stiffness of the torque arm, you have to take into account an automatically resetting ±0.6° twist (depending on the direction of rotation) of the encoder housing compared to the encoder shaft.

2) Absolute encoders AS7Y, AV7Y, and AG7Y have a self-diagnostics function. If an error is detected, the sensor reports it by deactivating the output signals to the encoder evaluation unit.

1) Due to the stiffness of the torque arm, you have to take into account an automatically resetting ±0.6° twist (depending of the direction of rotation) of the encoder housing compared to the encoder shaft.

2) Absolute encoders AS7W, AV7W, and AG7W have a self-diagnostics function. If an error is detected, the sensor reports it by deactivating the output signals to the encoder evaluation unit.

### 9.9.10 Mounting adapters for rotary encoders with solid shaft

#### XV.A

Encoder mounting adapter with SI units

## 10 Malfunctions

### 10.1 General information

#### **⚠ WARNING**

Risk of injury if the drive starts up unintentionally.

Severe or fatal injuries.

- Before you start working on the unit, disconnect the motor and all connected options from the power supply.
- Secure the motor against unintended power-up.

#### **⚠ CAUTION**

The surfaces on the drive can be very hot during operation.

Risk of burns.

- Let the motor cool down sufficiently before you start working on it.

#### **NOTICE**

Improper troubleshooting measures may damage the drive.

The drive system might be damaged.

- Use only genuine spare parts in accordance with the valid parts list.

### 10.2 Motor malfunctions

| Fault                   | Possible cause                                   | Measure                                                                                              |
|-------------------------|--------------------------------------------------|------------------------------------------------------------------------------------------------------|
| Motor does not start up | Supply cable interrupted                         | Check the connections and (intermediate) terminal points, correct if necessary                       |
|                         | Brake does not release                           | See "Brake malfunctions"                                                                             |
|                         | Supply cable fuse has blown                      | Replace fuse                                                                                         |
|                         | Motor protection (switch) has triggered          | Check that the motor protection (switch) is set correctly; current specification is on the nameplate |
|                         | Motor protection does not trip                   | Check motor protection control                                                                       |
|                         | Malfunction in control or in the control process | Observe the switching sequence; correct if necessary                                                 |

| Fault                                                             | Possible cause                                                                                    | Measure                                                                                                                                                                                                                              |
|-------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Motor only starts with difficulty or does not start at all        | Motor power designed for delta connection but connected in star                                   | Correct the connection from star to delta; follow the wiring diagram                                                                                                                                                                 |
|                                                                   | Motor power designed for star-star connection but only connected in star                          | Correct the connection from star to star-star; follow the wiring diagram                                                                                                                                                             |
|                                                                   | Voltage or frequency differs considerably from the setpoint, at least when switching on the motor | Provide better power supply system; reduce the power supply load;<br>Check cross section of supply cable, replace with cable of larger cross section if necessary                                                                    |
| Motor does not start in star connection, only in delta connection | Star connection does not provide sufficient torque                                                | If the delta inrush current is not too high (observe the regulations of the power supplier), start up directly in delta;<br>Check the project planning and use a larger motor or special design if necessary. Contact SEW-EURODRIVE. |
|                                                                   | Contact fault on star/delta switch                                                                | Check the switch, replace if necessary;<br>Check the connections                                                                                                                                                                     |
| Incorrect direction of rotation                                   | Motor connected incorrectly                                                                       | Swap two phases of the motor supply cable                                                                                                                                                                                            |
| Motor hums and has high current consumption                       | Brake does not release                                                                            | See "Brake malfunctions"                                                                                                                                                                                                             |

|----------------------------|----------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------|
| Noise in vicinity of brake | Gearing wear on the brake disk or the driver caused by jerky startup | Check the project planning, replace the brake disk if necessary<br><br>Have a specialist workshop replace the driver |
|                            | Alternating torques due to incorrectly set frequency inverter        | Check correct setting of frequency inverter according to its operating instructions, correct if necessary.           |

## 10.4 Malfunctions when operated with a frequency inverter

The symptoms described in chapter "Motor malfunctions" (→ 251) can also occur when the motor is operated with a frequency inverter. Refer to the frequency inverter operating instructions for the meaning of the problems that occur and to find information about rectifying the problems.

## 10.5 Customer service

**Have the following information available if you require customer service assistance:**

- Nameplate data (complete)
- Nature and extent of the problem
- Time the failure occurred and any accompanying circumstances
- Assumed cause
- Ambient conditions e.g.:
  - Ambient temperature
  - Humidity
  - Installation altitude
  - Dirt
  - etc.

## 10.6 Waste disposal

Dispose of the product and all parts separately in accordance with their material structure and the national regulations. Put the product through a recycling process or contact a specialist waste disposal company. If possible, divide the product into the following categories:

- Iron, steel or cast iron
- Stainless steel
- Aluminum
- Copper
- Plastics

The following materials are hazardous to health and the environment. These materials must be collected and disposed of separately:

- Oil and grease

Collect used oil and grease separately according to type. Ensure that the used oil is not mixed with solvent. Dispose of used oil and grease correctly.

## 11 Appendix

### 11.1 Wiring diagrams

#### INFORMATION

The motor should be connected as shown in the connection wiring diagram or the terminal assignment diagram, which are supplied with the motor. The following section only shows a selection of the common types of connections. You can obtain the relevant wiring diagrams free of charge from SEW-EURODRIVE.

#### 11.1.1 Wiring diagram R13 (68001 xx 06)

##### Delta connection

The following illustration shows the  $\Delta$  connection for lower voltage.

- [3] Wire jumper

11.1.6 EK8., AK8., ES7., AS7., EG7., AG7. encoders

Observe the notes in chapter "Connecting the encoder" (→ 86) when connecting encoders:

### 11.1.7 Terminal strips 1 and 2

The following figure shows the correct arrangement of the terminal strips for EDR..71 – 132, EDRN80 – 132S with brake, and with aluminum terminal box in different cable entry positions. The terminal strips must be arranged after the terminal box is turned. It is significant that the axis of terminal strip 2 is always aligned in a right angle to the rotary axis of the rotor.

Cable entry 1 and 3, here using 3 as an example<sup>1)</sup>

Cable entry X and 2, here using X as an example<sup>1)</sup>

27021601036054411

1) If terminal strip 1 does not exist, you can install terminal strip 2 in the position for terminal strip 1 or for the rectifier.

- |                   |                                                    |
|-------------------|----------------------------------------------------|
| [1] Cable entry 1 | [X] Cable entry X                                  |
| [2] Cable entry 2 | [a] Terminal strip 1 (or rectifier in design 3D-c) |
| [3] Cable entry 3 | [b] Terminal strip 2                               |

The terminals can vary in appearance and design depending on the terminal box variant and the connected options.

## INFORMATION

- Loosen any cables that are already connected before taking out terminal strip 2.
- The connected cables must be free from bends and twists, etc. when they are connected again.

EPL: Gc

DIN EN 60079-31

Type of ignition protection: tc, protection with housing

Group: IIIC, conductive dust

Temperature class: T=120 °C

EPL: Dc

ATEX\_IECEx\_BA\_08052017\_EN.docx

1 of 6

**The external fan** is intended for the cooling of electric motors used in explosive areas of zone 2 or 22. The motor to be cooled must comply with the standard IEC/DIN EN 60079-0 and the part of standard IEC/DIN EN 60079 on which the corresponding degree of ignition protection is based. The max. permissible surface temperature is 120 °C for group IIIC and T3 for group IIC devices. The protection class for the motor and terminal box is IP66. Use of the fan for other purposes than external ventilation is not permitted within the scope of the approval the ambient temperature may be between -20 °C and +40 °C.

**The unit** is generally not suitable for use in chemical atmospheres nor for the transport of flammable liquids.

X identification:

- Measurement of the maximum surface temperature was carried out in accordance with DIN 60034-1 or IEC 60079-7 with a voltage deviation of  $\pm 5\%$  defined as range A and without dust deposits.
- The impeller must not be exposed to UV radiation.
- Due to the geometry of the threads of the terminal box cover, the cable gland / blind plug must have a sealing

**The relevant safety regulation** with regard to protection from touching moving parts (DIN EN ISO 13857) is fulfilled.

**Before installation** care must be taken that the fan wheel moves freely and the blades of the impeller are not deformed or bent. This may cause imbalance, which can have a negative effect on the operating life. Protection class IP 10 on the air outlet side must be ensured by the operator at the location of use as per IEC/ DIN EN 60034-5. If the customer applies a coating, the design test certificate is void. The resulting changes must be evaluated by the customer.

**Installation** of the device must be carried out in a non-explosive atmosphere by qualified personnel and must be evaluated and documented by a suitably competent person. During installation it must be ensured that the connection diameter of the motor to be cooled matches the tube diameter. Deviations result in irregular tubes and the necessary minimum air gap between the impeller and the tube might no longer be maintained.

**The electrical connection** is made according to the operating mode in accordance with the connection diagram (see appendix). The connection diagram has also been affixed to the terminal box cover. The specifications of IEC/ DIN EN 60079-14 must also be observed for the connection.

The internal connections are made using spring-cage terminals, the cables to be connected must be provided with wire end sleeves. Connectible conductor cross sections are rigid 0.08-4 mm<sup>2</sup> (AWG 28-12) and flexible 0.08-2.5 mm<sup>2</sup> (AWG 28-14).

Cable glands and sealing plugs must have ATEX or IECEx system approval and be suitable for the intended use.

So as to not impair the IP protection class of the machine, they must have min. IP64.

The threads in the terminal box are of M16x1.5 design (for Bg63-160 2x M16x1.5). This can be adjusted to M20x1.5 upon customer request. The cable gland / blind plug must have a seal (according to IEC 60079-31).

The unit must be earthed via the earth connection in the housing. Earthing is via the screw connection provided in the terminal box (tightening torque 4.5 Nm) using cables with wire end sleeve or ring cable lug and a serrated lock screw. The cable cross section must be min. 0.75 mm<sup>2</sup>. The external earthing of the external fan must be via the attachment screws at the customer motor. The cross section must be min. 4 mm<sup>2</sup>. The contact surfaces must be bare metal. The earthing screw must be protected against detachment by a suitable device (serrated lock screw, locking mesh etc.). After installation corrosion protection must be applied to retain conductivity.

The max. permissible currents can be found in the table "Operating voltage range for series IL/ILL" (see appendix). The permitted tolerance of the voltage range corresponds to range A according to DIN EN 60034-1 ( $\pm 5\%$ ). In the Bg63-160 a posistor has additionally been installed due to the low motor currents. To avoid exceeding the above-mentioned surface temperatures during a fault the use of an overvoltage protection and/or the posistor (Bg63-160) with a suitable trigger device should be ensured.

wistro

After electrical connection is complete, the terminal box must be attached with screws tightened to a torque of 4.5 Nm.

**After installation** and during commissioning a test run must be carried out. Here, care must be taken that the fan wheel rotates in the same as the direction of the arrow marked on the inner surface of the air intake grille and therefore blows air over the motor to be cooled.

**Caution:** The cooling effect is considerably lower if the direction of rotation is incorrect. There is a risk of the motor to be cooled overheating and the surface temperature of the fan motor of  $T=120\text{ }^{\circ}\text{C}$  being exceeded.

**During operation** care must be taken that especially in dusty atmospheres that there is no excessive build-up of dust on the fan blades, as this can also result in imbalance which reduces the operating life and may result in friction which could cause ignition. This also applies to atmospheres containing particles, e.g. in the wood processing industry or in coal grinding mills.

**Caution:** Prior to opening the fan a cooling down phase of 5 min. must be waited.

**WISTRO** units are normally supplied ready for installation. The bearings are maintenance-free. The radial shaft seal has been designed for an average service life of 20,000 operating hours.

In case of longer operating periods, the external fan must be replaced with a new unit.

Repairs or modifications of the unit must only be carried out in consultation with WISTRO.

**Manufacturer:** WISTRO Elektro-Mechanik GmbH

### 11.3 Certificates

#### INFORMATION

The IECEx certificates for motor, encoder and forced cooling fan are not supplied.

You can find them with the IECEx certificate number specified on the nameplate at [www.iecex.com](http://www.iecex.com).

The certificates for motors with the approval for the Brazilian market by INMETRO issued by DNV are available from SEW-EURODRIVE on request.

The certificates for motors with the approval for the Korean market issued by KOSHA are available from SEW-EURODRIVE on request.
